Ms. Mae Willkom  
Remediation and Redevelopment Program  
Wisconsin Department of Natural Resources  
P.O. Box 4001  
Eau Claire, Wisconsin 54702- 4001

Dear Ms. Willkom:

Fort McCoy collected a third round of perfluorinated chemicals (PFCs) at Fire Training Burn Pit 1 (FTBP1; BRRTS No. 02-42-278852) on August 14 and 15, 2017. Results for perfluorooctanoic acid (PFOA) and perfluorooctanesulfonate (PFOS) for September and December 2016, and August 2017 are summarized in Table 1. Analytical reports for September 2017 are included in Attachment 1. The United States Environmental Protection Agency (USEPA) has established a Health Advisory (HA) level in drinking water for the concentration of PFOS + PFOA of 70 parts per trillion (ppt).

Figure 1 shows the location of FTBP1, the 23 monitoring wells present at the site, and the location of the nearest water body, Suukjak Sep Creek, more than 1,500 feet west (downgradient) of the former burn pit. As shown, there are 11 monitoring wells that have been included in the monitoring program since 2005. Based upon an agreement with the USEPA and the Wisconsin Department of Natural Resources (WDNR), the other 12 wells have not been monitored since 2005. However, well OW142 (the farthest downgradient well, which has not been included in the monitoring program since 2005) was sampled in August 2017.

Isoconcentration maps of combined PFOA + PFOS concentrations for each of the three sampling events are presented on Figures 2, 3, and 4. The data presented in Table 1 and on Figures 1, 2, and 3 show a good deal of fluctuation in concentrations at wells within the plume and at the downgradient plume margin. For six of the wells, the PFOS + PFOA concentrations were reported within the same order of magnitude during each of the sampling events. However, at four wells (OW141, P308, P308A, and OW145) reported concentrations fluctuated by an order of magnitude between sampling events. At well OW117, located closest to former FTBP1, reported concentrations fluctuated by two orders of magnitude during the three sampling events.

Exceedances of the HA were reported at seven of the 11 wells during December 2016, when the average groundwater elevation across that site was the lowest between the three sampling events. HA exceedances were reported at five wells during August

2017, when the average groundwater elevation was at its highest level for the three sampling rounds. HA exceedances were reported at six wells during September 2016, when the average groundwater elevation across the site was between the December 2016 and the August 2017 level.

The data show that the concentration of PFOS + PFOA at well OW141, located just west of West Thirteenth Avenue, was above in December 2017, and below the HA in September of 2016 and August of 2017. Well OW142 (the farthest downgradient well present at the site) was only sampled during August 2017, and the reported concentration of PFOS + PFOA was below the HA.

The data continue to show significant concentration fluctuations between sampling events for wells OW17, OW308, and OW141, located in the center of the groundwater plume flow path. Due to the fact that the level of concern (the HA) is 70 ppt, a very small fluctuation is significant. In most, if not all, groundwater plumes variability in concentrations between monitoring rounds at the same well can regularly be greater than 70 ppt, and often greater than 500 ppt. For most parameters, where the levels of concern (standards) are in parts per billion (ppb) or parts per million (ppm), a variation of 500 ppt (0.5 ppb/0.0005 ppm) is written off as representing the actual concentration variability present within the plume at each location, or just noise in the data. Therefore, when the standard is in ppb or ppm, that amount of variability is not significant. However, when the level of concern is 70 ppt and the typical concentration variability within a plume can be at least 5 times the concentration of concern, it complicates the process of defining the condition of the plume (stable, receding, expanding), along with the location of the downgradient plume margin.

Data collected so far has confirmed that PFC concentrations near and downgradient of former FTBP1 are present at levels exceeding the HA (in some cases by several orders of magnitude), and that concentrations exceeding the HA are restricted to the water table wells, as exceedances have not been reported in the piezometers. However, not enough data has been collected to determine the condition of the plume (stable, receding, expanding), or to define the downgradient plume margin. In addition, insufficient data has been obtained to determine if reported concentration fluctuations, in wells located in the center of the plume flow path, are a result of actual concentration variability within the plume, or are being caused by ongoing releases from former FTBP1. Other than the final remedial action conducted, which involved excavation and offsite disposal of 60 cubic yards of contaminated soil, it is not known if the ozone injection and bioremediation efforts implemented to remediate the chlorinated contamination did anything to reduce PFC concentrations at FTBP1.

Unlike petroleum constituents and chlorinated compounds, that have been investigated and remediated at many sites for more than three decades and are well understood, PFCs are emerging contaminants. Behavior of PFCs in the subsurface (migration/degradation) is not well understood, and methods of definition and remediation for these parameters are still being developed. As a result of evaluating sites that formerly used Aqueous Film Forming Foam (AFFF) for fire training, the Army

has identified PFC groundwater contamination at several installations across the country. Some of these Army installations have PFC contamination present in drinking water wells. To investigate and remediate these PFC contaminated sites and minimize human health risks, Army Headquarters is addressing this problem utilizing a nationwide contract, instead of having the work performed by each installation. This approach will ensure that taxpayer fund allocations are prioritized based upon human health risks present at each facility. Thus, the sites with contaminated drinking water wells will be addressed first. In addition to efficient allocation of taxpayer resources, this approach will ensure that PFC investigation and remediation knowledge gained along the way will be applied at subsequent facilities. The contractor is currently drafting the schedule to identify the timeline for addressing all Army installations with potential PFC impacts.

The additional work required at FTBP1 will be conducted as part of the Army Headquarters nationwide contract. As Fort McCoy does not have contaminated drinking water wells, the additional investigation work at FTBP1 will benefit from lessons learned at Army installations with higher PFC risks. It is anticipated that the next phase of work at FTBP1 will begin in late 2018 following work at the installations with greater PFC risks.

If you have any questions, please contact Craig Bartholomew at (608) 388-8453.

Sincerely,

A handwritten signature in blue ink that reads "James R. Hessil".

James R. Hessil  
Environmental Division Chief

Enclosures

## Qualifiers

### LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

## Glossary

### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

TestAmerica Job ID: 320-30853-1

## Job ID: 320-30853-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Job Narrative 320-30853-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 8/17/2017 9:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

#### Receipt Exceptions

A Chain-of-Custody (COC) was not received with these samples: OW-145 (320-30853-1), OW-117 (320-30853-2), P-134A (320-30853-3), OW-134 (320-30853-4), P-133A (320-30853-5), OW-133B (320-30853-6), OW-133B DUP (320-30853-7), OW-308 (320-30853-8), OW-308 (320-30853-8[MS]), OW-308 (320-30853-8[MSD]), P-308A (320-30853-9), OW-137 (320-30853-10), OW-141 (320-30853-11), OW-142 (320-30853-12) and EQ Blank (320-30853-13). A copy of the COC was received from the project manager in order to log the samples in.

#### LCMS

Method(s) 537 (modified): The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-181076 and analytical batch 320-181949 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Hyde Environmental, Inc.

Job Number: 320-30853-1

**Login Number:** 30853

**List Source:** TestAmerica Sacramento

**List Number:** 1

**Creator:** Edman, Connor M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	False	Refer to Job Narrative for details.
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
