Tim,

Addition of two feet of gravel, as part of a drainage control effort, has resulted in burial of thirteen of the flush-mount monitoring wells at Former Fire Training Burn Pit #1 (FTBP1; BRRTS No 02-42-581481; see attached map and photos). These wells are located within the PFAS plume that extends west of FTBP1 and will be needed during the RI/FS work. I just wanted you to know that the installation is in the process of retaining a certified driller to extend each of these wells above ground, install pro-tops bollards, and re-develop the wells. We want to make certain that they will be ready for sampling when the RI/FS work begins.

Please let me know if you have any questions. Thanks,

Craig O. Bartholomew
