Re: Approval of the Long-Term Monitoring Plan – Revision 1; Lower Fox River and Green Bay Superfund Site, WI

Dear Messrs. Montney and Hartman:

The U.S. Environmental Protection Agency and the Wisconsin Department of Natural Resources (“Response Agencies”) have completed their review of the June 2023, Long-Term Monitoring Plan - Revision 1 (LTMP) for the Lower Fox River and Green Bay Superfund Site, Operable Units 2-5, submitted on June 19, 2023 by Foth Infrastructure & Environment, LLC, on behalf of Georgia-Pacific Corporation and Glatfelter Corporation. This revised LTMP was originally prepared by Anchor, Tetra Tech EC, Inc., Shaw Environmental & Infrastructure, Inc., and LimnoTech, Inc. and provided as Appendix I of the Lower Fox River Remedial Design 100% Design Report in 2011 which was approved by the Response Agencies.

The LTMP is a required program for monitoring the post-remediation recovery of Operable Units 2 through 5, and to assess progress toward achieving the remedial action objectives specified in the various Records of Decision. Consistent with the June 2011, Lower Fox River Operable Unit 1 – Long-term Monitoring Plan, Operable Unit 1 data will also be analyzed pursuant to applicable provisions of the Operable Units 2-5 LTMP to assure a complete river-wide assessment of remedial action objectives. The Response Agencies appreciate the extensive efforts of all parties to clarify the revised LTMP to aid in future decision-making, regarding achieving media and biota endpoints.

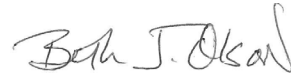

Therefore, the Response Agencies approve the revised LTMP. The final document should be formally distributed in both hardcopy and electronic format within thirty (30) days of receipt of this letter.

If you have any questions, contact Jim Saric at 312-886-0992 or Beth Olson at 920-366-5219.

Sincerely,

James A. Saric,
Remedial Project Manager, USEPA Region 5
