Dear Ms. Meyer,

This post-source remedial action *Groundwater Monitoring Progress Report* (“Report”) was prepared by Geosyntec Consultants (Geosyntec) on behalf of Wisconsin Electric Power Company (d.b.a, We Energies) for Metro North Service Center (MNSC) located at 3100 West North Avenue, Milwaukee, Wisconsin 53208 (Site).

This Report is being submitted to the Wisconsin Department of Natural Resources (WDNR) pursuant to the August 12, 2022 *Groundwater Monitoring Plan* and in accordance with NR 724.13(3) of the Wisconsin Administrative Code and WDNR Form 4400-194<sup>1</sup>. The NR 712.09 submittal certification is provided in **Attachment 1**.

This Report includes salient background information<sup>2</sup>; the scope, procedures and results of the May 2023 groundwater monitoring event (third post-source remedial action groundwater monitoring event); data evaluation and investigation-derived waste (IDW) management information.

This Report follows the September 19, 2023 *Groundwater Monitoring Progress Report* documenting the first and second post-source remedial action groundwater monitoring events.

---

<sup>1</sup> Pursuant to WDNR Form 4400-194 (R 06/20) General Instructions, the option of a narrative report or letter in lieu of the form may be submitted.

<sup>2</sup> Further background information is provided in the August 12, 2022 *Groundwater Monitoring Plan*.

## 1. BACKGROUND

The Site is a 6.28-acre parcel developed with an approximately 81,300 square foot single-story building consisting of office space, a storage area and a garage with a vehicle service bay. Recent building reconstruction/renovation activities included demolition and reconstruction of the southwest portion of the building and expansion of the garage area (eastern portion of the building). The Site property is zoned IL2, Industrial-Light.

A former dry cleaner (former building) was located proximate to the southwest portion of the current Site building area. This former dry cleaner is the source of former and residual impacts at the Site. Tetrachloroethene (PCE) is the primary Site contaminant.

Source area remedial action was completed in 2021 during the reconstruction of the southwest portion of the Site building. Approximately 4,630 tons of PCE-impacted soil was removed from the source area and a vapor mitigation system (VMS) (active sub-membrane depressurization system) was installed.

The post-source remedial action groundwater monitoring well network was installed in April 2022. As documented in the August 12, 2022 *Groundwater Monitoring Plan*, the groundwater monitoring objective is to collect sufficient data to demonstrate that the following NR 726.05(6) criteria are satisfied:

- NR 726.05(6)(b) - “Natural attenuation will achieve compliance with NR 140 groundwater quality standards within a reasonable period of time”.
- NR 726.05(6)(c) - “The groundwater plume margin is stable or receding”.

## 2. SCOPE AND PROCEDURES

The third post-source remedial action groundwater monitoring event was conducted between May 16 and 18, 2023. Groundwater level measurements were collected on May 16 and groundwater sampling was conducted on May 17 and 18.

The groundwater samples, including two (2) duplicate samples, were submitted to Pace Analytical Services, LLC for analysis of volatile organic compounds (VOCs) and geochemical parameters [ethene, ethane, methane and total organic carbon (TOC)]. One (1) trip blank and one (1) equipment blank were submitted for analysis of VOCs. Sampling included the measurement of field parameters [dissolved oxygen (DO), oxidation-reduction potential (ORP), pH, temperature and turbidity].

The groundwater monitoring scope and procedures were consistent with the August 12, 2022 *Groundwater Monitoring Plan* with the exception that groundwater samples were not collected from shallow groundwater monitoring wells MW-05-22 and MW-06-22 due to insufficient water at these

locations within the highly variable shallow fill/clay groundwater unit. In addition, for MW-03-22, sufficient water was only available for VOC analysis.

### 3. RESULTS

#### *Groundwater Elevation and Flow Data*

The May 2023 groundwater depth and elevation data are summarized in **Table 1 (Attachment 2)**. The groundwater/piezometric elevation contours for the shallow fill/clay, intermediate sand and gravel and lower silt/clay groundwater units are depicted on **Figures 1, 2 and 3 (Attachment 3)**, respectively. These figures generally indicate that groundwater flow is predominantly to the northeast (consistent with pre-remedial action groundwater data) within these units; however, these data also indicate a groundwater flow component to the northwest in the shallow and intermediate units.

#### *Groundwater Analytical and Field-Testing Data*

The May 2023 groundwater monitoring laboratory report is provided in **Attachment 4**. The groundwater sample analytical and field-testing data are summarized in **Table 2 (Attachment 2)** and select analytical data are provided on **Figures 1, 2 and 3**. The following table provides a generalized summary of these data:

#### 4. DATA EVALUATION

##### *Post-Source Remedial Action Groundwater Data*

Consistent with the 2022 post-remedial action groundwater monitoring results, the May 2023 results indicate a limited horizontal and vertical extent of residual PCE groundwater impacts greater than the NR 140 ES at the Site. PCE was only detected in groundwater at source area shallow fill/clay unit monitoring well MW-01-22 at a concentration greater than the NR 140 ES.

A post-remedial action CVOC concentration and groundwater elevation versus time plot for groundwater monitoring well MW-01-22 is provided in **Attachment 5**. The plot depicts a relatively stable concentration trend over the period of the first three (3) post-source remedial action groundwater monitoring events. Further data trend evaluation will be documented in future progress reports.

Consistent with Site investigation groundwater data, the post-remedial action groundwater monitoring data (CVOC and geochemical parameter data) indicate that natural attenuation of residual PCE concentrations in Site groundwater is likely predominantly occurring through a combination of physical processes such as dilution, dispersion, sorption and volatilization. This is based on the low concentrations of PCE degradation products, low TOC concentrations and elevated DO and ORP concentrations in Site groundwater.

##### *Comparison to Pre-Source Remedial Action Data*

As summarized in the following table, the average post-source remedial action PCE and TCE groundwater concentrations (at current source area monitoring well MW-01-22) represent a greater than 99 percent (%) reduction in concentration from the average pre-source remedial action PCE and TCE groundwater concentrations (at former source area monitoring well MW-9).

## 5. IDW MANAGEMENT

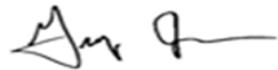

Groundwater sampling purge water generated during the May 2023 groundwater monitoring event was contained in a labeled 55-gallon drum. The drum was transported by SET Environmental, Inc. (SET) to Houston, Texas for treatment/disposal under the existing hazardous waste disposal profile. The disposal documentation is included in **Attachment 6**.

## QUALIFIERS

Project: CHE8094OQ METRO NORTH SERVICE  
Pace Project No.: 40262503

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
