Subject Start-up Sampling Results  
Fire Suppression Water Treatment System  
ATC Blount Transmission Substation, Madison Wisconsin

---

From Leo Linnemanstons, AECOM  
Dave Henderson, AECOM

---

Date October 21, 2019

On Tuesday, October 8, 2019, the American Transmission Company (ATC) conducted start-up operations of a fire suppression water treatment system associated with the Blount Transmission Substation project. The system is located on the Madison Gas & Electric (MG&E) property, 201 South Blount Street, Madison Wisconsin. North Shore Environmental Construction, Inc. (NSEC), provided the system operation and AECOM Technical Services, Inc. (AECOM) provided monitoring services.

The system was constructed and operated in accordance with the following:

- A Plans and Specifications approval, Project Number S-2019-0662, from the Wisconsin Department of Natural Resources (WDNR), Bureau of Water Quality, Wastewater Section for the treatment system design.
  - Authorization under the WDNR's General Permit to Discharge Under the Wisconsin Pollutant Discharge Elimination System (WPDES) for Petroleum Contaminated Water (WPDES Permit No. WI-0046531-06-1).
  - *Operation & Maintenance Plan and Manual* for Blount Substation Fire Suppression Water Treatment Discharge, AECOM, October 2019.

The start-up operation was a limited one day event where approximately 8,000 gallons of fire suppression water was treated and re-containerized in a frac tank. There were no discharges from the treatment system other than to the frac storage tank. At 1:45 pm, when approximately 7,363 gallons had been treated, AECOM conducted a system wide water sampling event. At the completion of the monitoring event, the system was shut down until receipt of the sampling laboratory analytical results confirmed system operational efficiencies.

The start-up sampling event included monitoring of system operational pressures and water sampling. Notes on the monitoring event are provided on the attached Field Form. A schematic of the system water sampling locations is provided on Figure 1. Sampling laboratory analysis

parameters included WPDES permit parameters (i.e. oil & grease, pH, Total BOD5, BETX, and PAHs) along with operational parameters (i.e. PFAS and WI DRO). WPDES parameter and DRO samples were sent to Eurofins/TestAmerica Laboratory for analysis. PFAS samples were sent to Vista Analytical Laboratory for analysis.

Laboratory analytical results are summarized on Table 1 and copies of the laboratory reports are attached.

The Eurofins/TestAmerica Laboratory results indicate that the discharge meets the WPDES permit parameters for oil & grease, pH, Total BOD5, BETX, and PAHs. The discharge also meets the WI DRO operational requirements.

The Vista Analytical Laboratory results for PFAS indicate the discharge also meets the operation requirements. Of the seven PFAS compounds identified by the WDNR for operational monitoring, there is a lab method blank detection for perfluorooctane sulfonate (PFOS). The PFOS artifact, at a concentration of <1.0 ng/l, seems to carry over into the data set showing up after GAC-1, GAC-2, GAC-3 (i.e. the discharge sample) and the field blank. AECOM confirmed with the laboratory that PFOS is a lab artifact.

On Friday, October 18, 2019, AECOM provided the analytical results to the WDNR for review. The WDNR concurred verbally and via email that the PFAS method blank detection appears to be a lab artifact and that the WDNR does not object to operation of the treatment system and discharge under the coverage granted for the WPDES General Permit for Petroleum Contaminated Water.

Based on these results, ATC is preparing to begin full-time operation of the fire suppression water treatment system starting on Monday, October 21, 2019.

### Narrative

#### Job Narrative 500-171404-1

### Comments

No additional comments.

### Receipt

The samples were received on 10/9/2019 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.0° C.

### GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### GC Semi VOA

Method WI-DRO: The surrogate n-Nonane was below the QC limit for the following QC samples: (LCS 500-509431/2-A), (LCSD 500-509431/3-A) and (MB 500-509431/1-A), however, the samples had surrogate present & within control limits. The spike standard recoveries for LCS/LCSD were within control limits; therefore, the data have been reported and qualified.

Method WI-DRO: The following sample required a dilution due to the nature of the sample matrix: OWS (500-171404-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method WI-DRO: Surrogate recovery for the following samples was outside control limits: Inlet (500-171404-2) and Bag 2 (500-171404-3). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed. The samples were originally analyzed undiluted and had acceptable surrogate recoveries. The target compound was above the calibration range; therefore, that data could not be reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### General Chemistry

Method SM 5210B: BOD set up outside of hold due to analyst error.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Qualifiers

### GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

### General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.0
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

**Vista Work Order No. 1903574**

Mr. Dave Henderson  
AECOM  
1555 N. River Center Drive  
Milwaukee, WI 53212

Dear Mr. Henderson,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on October 10, 2019 under your Project Name 'ATC - Madison'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at [mmaier@vista-analytical.com](mailto:mmaier@vista-analytical.com).

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier  
Laboratory Director

*Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.*

**Vista Work Order No. 1903574****Case Narrative****Sample Condition on Receipt:**

Seven aqueous samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology. Sample “Field Blank” was not listed on the CoC. The sample collection date and time were not recorded on the sample labels.

**Analytical Notes:****PFAS Isotope Dilution Method**

The samples were extracted and analyzed for a selected list of PFAS using the PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA, and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

**Holding Times**

The samples were extracted and analyzed within the method hold times.

**Quality Control**

The Initial Calibration and Continuing Calibration Verifications met the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The internal standard recoveries outside the acceptance criteria are listed in the table below.

**QC Anomalies**

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

**Sample ID: Bag 2**
**PFAS Isotope Dilution Method**

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

## DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
D	Dilution
DL	Detection limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limits of Detection
LOQ	Limits of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
NA	Not applicable
ND	Not Detected
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
TEQ	Toxic Equivalency
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

**Attachments:** Coverage Letter\_ATCBlountSSWaterDischarge.pdf; J171404-1 UDS Level 2 Report Final Report.pdf; Summary\_1903574.pdf; Figure 1 PFAS Treatment Flow Diagram.pdf

Hi Dave,

Thanks for submitting these results. Given the extremely low level of PFOS (0.553 ng/L) and comparable level of the contaminated sample blank (0.412 ng/L) in the effluent, along with the satisfactory levels of the other parameters, we don't object to this discharge under the Petroleum Contaminated Water General Permit. As a reminder of the conditions of the GP, I have attached the original cover letter to this email, and a link where the permit and fact sheet can be downloaded here: <http://dnr.wi.gov/topic/wastewater/generalpermits.html>. Please let me know if you have any questions.

Best,  
Nate

**Subject:** ATC Fire Suppression Water Treatment - startup lab results

Nate,

As we just discussed, attached are two lab reports. The Vista report is the PFAS results and the Eurofins report are the WPDES and DRO results.

As I mentioned, of our regulated PFAS compounds, we have a lab method blank detection for PFOS. The PFOS artifact, at a concentration of <1.0 ng/l, seems to carry over into the data set showing up after GAC-1, GAC-2, and GAC-3 (i.e. the discharge sample). I've attached a schematic figure showing the sampling locations relative to the treatment system.

On our client's behalf, we ask that the WDNR review the results, see if you concur with the lab artifact analysis, and if possible, provide approval to begin discharge from the treatment system under our WPDES permit.

Please call with any questions.

Thanks

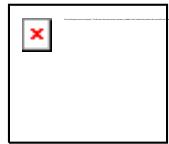

dsh
