Thomas:

I've read through the plan for the three boring locations for the Sunshade project. The locations look fine as they are in the area of the proposed Sunshade. Soil and groundwater samples are to be analyzed for VOCs and PFAS compounds. This is consistent with other sampling conducted for F-35 construction projects.

Let me know if you have any questions.

Steve Ales

Gentlemen,

Attached for your review, is the Sampling and Analysis Plan for the F-35 Beddown Sunshade and Building 420 project at Truax Field. As I indicated previously, we are scheduled to conduct the work on November 19.

It is my understanding that Steve Ales would be able to review the SAP next week. Any feedback and comments regarding the SAP is greatly appreciated.
