Tauren:

The City is rebuilding Custer Street this summer and will be generating a significant quantity of spoil from the utility work in the ROW. We sampled the material earlier this month and it looks appropriate for use in constructing the engineered barrier at Site 1 on River Point (see attached). Wanted to send this to you for consideration concurrent with your reviews of the SI and the RAP/MMP.

Sincerely,
Harris Byers, Ph.D.

Sr. Brownfields Project Manager
Contaminant Hydrogeologist / Urban Geochemist

Attention: Mr. Adam Tegen
Community Development Director
900 Quay Street
Manitowoc, WI 54220

Dear Mr. Tegen,

**Reference: Characterization of Soil in the Custer (35th to 39th Streets) Street Rights of Way;
Manitowoc, Wisconsin**

Stantec Consulting Services Inc. (Stantec) has prepared this letter report for the City of Manitowoc Community Development Authority (CDA) following collection and laboratory analysis of soil samples taken from five test pits installed in the Custer Street rights of way (ROW) from 35th to 39th Streets in Manitowoc, Wisconsin. The purpose of this sampling was to characterize representative soil targeted as potential fill to construct the engineered barrier at Site 1 or Site 3 of the River Point District property. This work was completed using funds from a Brownfield Cleanup Revolving Loan Fund (RLF) loan made to the CDA from the City of Manitowoc (City). The City's Brownfields Cleanup RLF was funded by a grant awarded to the City by the U.S. Environmental Protection Agency (USEPA) in Fiscal Year 2013 under cooperative agreement BF-00E01242. This project was completed pursuant to the petroleum cleanup eligibility determination (Stantec, 2020b) approved by the Wisconsin Department of Natural Resources (WDNR) on June 3, 2020. The USEPA Assessment, Cleanup and Redevelopment Exchange System ID for Site 1 is 239716.

BACKGROUND

Installation of new utilities within the Custer Street ROW is planned for Summer/Fall 2021. The ROW work is expected to generate approximately 3,800 cubic yards of soil that has potential to be used by the City to construct the needed engineered barrier at Site 1 or Site 3 of the River Point District property. As the River Point District is undergoing investigation under the Chapter NR 700 rule series of the Wisconsin Administrative Code (WAC), and at the recommendation of the Wisconsin Department of Natural Resources (WDNR) Project Manager (Tauren Beggs), sampling of representative soil prior to placement on the River Point District property was warranted.

METHODS

On July 9, 2021, Vinton Construction Company (Vinton; a contractor to the City) completed five test pits in the Custer Street ROW between 35th and 39th Streets to provide access to subsurface soils in the ROW. The test pits were extended from the current driving surface downward to 8.5 feet below ground surface, which corresponds to the depth interval of potential fill for River Point Site 1 and Site 3. The locations of the test pits are illustrated on **Figure 1**. Photographic documentation of the test pits and subsurface lithology is provided in **Attachment A**.

July 28, 2021
Mr. Adam Tegen
Page 2 of 3

Reference: Characterization of Soil in the Custer (35th to 39th Streets) Street Rights of Way; Manitowoc, Wisconsin

The existing driving surface overlays a continuous brown/tan silty sand unit, which appears to be reworked native soil (e.g. Attachment A, Photo Nos. 8 and 13). This material appears similar to reworked native soils encountered in other ROWs in Manitowoc.

Samples of the silty sand were collected from the excavation by Stantec, and a portable photoionization detector (PID) calibrated to a 100 parts per million isobutylene standard was used to screen the soil samples for volatile organic compounds (VOCs). Due to the uniformity of the reworked native soils, one grab sample from each test pit was collected by Stantec and submitted to Eurofins TestAmerica (Chicago, Illinois) under chain-of-custody procedures for analysis of Resource Conservation and Recovery Act (RCRA) metals, polycyclic aromatic hydrocarbons (PAHs), and VOCs. The laboratory report is provided in **Attachment B** and detected constituents are compared to ch. NR 720 WAC health-based residual contaminant levels (RCLs) and background threshold values (BTVs) on **Table 1**.

RESULTS

PID measurements of the brown/tan silty sand unit were all less than one instrument unit, and as summarized on **Table 1**, VOCs were not detected in soil samples. With the exception of arsenic, the concentrations of detected heavy metals and PAHs in the brown/tan silty sand unit are all less than the most restrictive health-based soil quality standards. Although the concentrations of arsenic in select soil samples are greater than the non-industrial direct contact RCL and the soil to groundwater RCL, detected concentrations are less than the BTB suggesting the arsenic detections in the brown/tan silty sand unit are not likely a result of a spill.

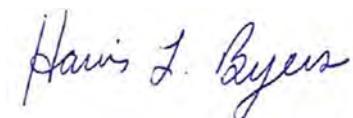

CONCLUSIONS

As detected constituents in the silty sand unit from the Custer Street ROW were less than the BTB and/or the most restrictive health-based standards, excavated material from the characterized horizon generated as part of future utility work from this ROW appears appropriate for use in constructing the engineered barrier on Site 1 or Site 3. However, if encountered in the Custer Street ROW, anthropogenic fills and/or soils with apparent impacts (e.g. unusual odor or colors) should not be used in constructing the engineered barrier on Site 1 or Site 3.

A soil/material management plan should be developed to further guide quality/placement/segregation of soil at Site 1 or Site 3. Stantec recommends submitting this letter to WDNR for concurrence on our conclusions prior to placement of excavation spoil from the ROW at Site 1 or Site 3.

Regards,

Stantec Consulting Services, Inc.

LIMITATIONS

This soil sampling was performed in accordance with generally accepted practices of the profession for performing similar studies at the same time and in the same geographical area. Stantec observed that degree of care and skill generally exercised by the profession under similar circumstances and conditions. No other warranty is expressed or implied.

Stantec observations, findings, and opinions must not be considered as scientific certainties, but only an opinion based on our professional judgment concerning the significance of the data gathered during the course of the investigation. Specifically, Stantec does not and cannot represent that the soil contains no hazardous or toxic materials or other latent condition beyond that observed by Stantec. Further, Stantec does not warrant that this submittal represents an exhaustive study of all possible environmental concerns at the project area.

This document was prepared by Stantec for the CDA. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Stantec accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Receipt

The samples were received on 7/10/2021 11:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.5° C.

GC/MS VOA

Method 8260B: The laboratory control sample (LCS) for 608761 recovered outside control limits for bromoform, dibromomethane, and ethylene dibromide. This is a prepped 5035 LCS. All daily instrument LCSs were acceptable, and the data have been reported.37th (500-202162-1), 39th (500-202162-3), MACARTHUR (500-202162-4) and ROBALO (500-202162-5)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: Perylene-d12 Internal standard (ISTD) response for the following samples was outside of acceptance limits: 39th (500-202162-3). Analytes associated to this internal standard were not detected above the reporting limit; therefore, re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
