This interim construction documentation letter report summarizes the remedial work completed between April of 2021 and March of 2023 on behalf of the City of Manitowoc (hereinafter referred to as the City) and the Community Development Authority of the City of Manitowoc (CDA; current owner) at the former junk yard located at 1050 York Street in the River Point District in the City of Manitowoc, Wisconsin (herein referred to as the "Property").

For general continuity with prior work, the "Remediation Area" consists of the southern 22,300 square feet of the 2.6-acre portion of the River Point District formerly referred to as "Site 2" in previous environmental investigations (Stantec 2019, 2020, and 2021a). Please note however that "Site 2" was recently platted as a 0.691 acre parcel of land defined as "Lot 1" on the Certified Survey Map of the Phase I Redevelopment Area (PIN No. 05200016807000); the locations of the Remediation Area (shaded green) and Lot 1 (outlined in black) relative to the Phase I Redevelopment Area (outlined in red) are illustrated on Figure 1. The location of the River Point District is outlined in yellow and the location of the Remediation Area is shaded green relative to regional topography on Figure 2. The locations of the River Point District and the Remediation Area are illustrated on the 2021 orthophotograph on Figure 3.

The corresponding Wisconsin Department of Natural Resources (WDNR) Bureau for Remediation and Redevelopment Tracking System (BRRTS) case number for the River Point District is BRRTS ID: 02-36-585491 (Local Governmental Unit; LGU). Once a developer is identified, a new BRRTS case will be established to facilitate redevelopment of the Property.

This letter and remediation work described in this letter was completed using funding from a fiscal year (FY) 2022 United States Environmental Protection Agency (USEPA) Brownfield Cleanup Grant awarded to the City under Cooperative Agreement Number BF00E03197. The USEPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) identification number associated with "Site 2" is 239718.

It is critical to realize that work performed under this cleanup grant does not duplicate cleanup work previously completed in the River Point District using funds from a cleanup loan provided to the CDA from the City's FY 2013 USEPA Brownfield Revolving Loan Fund program.

BACKGROUND

As summarized in assessment work completed to date by Stantec (2019, 2020, and 2021a), volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAH), polychlorinated biphenyls (PCBs) and Resource Conservation and Recovery Act (RCRA) metals have been detected in granular fill at concentrations greater than applicable ch. NR 720 WAC (NR 720) Residual Contaminant Levels (RCLs) and/or Background Threshold Values (BTVs) in the Remediation Area (Figure 4). These soil impacts are isolated to the anthropogenic fill unit and do not appear to be leaching to underlying native soil. Given that concentrations of constituents of concern in soil identified by Stantec far exceed RCLs, removal of the fill unit as a source control measure was warranted to facilitate non-industrial redevelopment.

EXCAVATION AND OFFSITE DISPOSAL OF MATERIAL DURING INSTALLATION OF THE STORMWATER CONVEYANCE SYSTEM

As described in the Stantec (2021b) Remedial Action Plan (RAP) and Material Management Plan (MMP), and as part of public road rights-of-way (ROW) construction to facilitate redevelopment of the River Point District, impacted fill material was removed from the Remediation Area by Vinton Construction Co. (Vinton) in the spring of 2021 to facilitate the installation of the stormwater conveyance system. The excavation extended vertically to a maximum depth of approximately 8 feet below ground surface (Figure 5) and extended horizontally south to York Street (Attachment A, Photo Nos 1-2) to maintain a safe slope. Excavated material was transported to the Waste Management solid waste landfill in Whitelaw, Wisconsin for disposal, and landfill tickets confirm the excavation generated 862.34 tons of material (approximately 575 cubic yards). Landfill tickets are provided in Attachment B. Following, Vinton installed helical piles to support the stormwater piping running from 1015 York Street to the Manitowoc River (Appendix A, Photos 3 and 4). Following installation of the helical piles, a concrete grade beam was set, and storm sewer piping was installed (Appendix A, Photos 5-7). The excavation was backfilled with clean imported crushed limestone fill material sourced from Vinton's gravel quarry and the excavation was backfilled to match the surrounding grade (Appendix A, Photo 8). The thickness of fill is illustrated on Figure 6 and the finished ground surface is illustrated on Figure 7.

SUPPLEMENTAL EXCAVATION AND OFFSITE DISPOSAL OF IMPACTED FILL MATERIAL

Excavation Activities. As proposed in the Stantec (2023) Analysis of Brownfield Cleanup Alternatives (ABCA), impacted fill material was removed by Vinton from the Remediation Area to facilitate future commercial Property reuse. The excavation extended vertically to a maximum depth of approximately 7.62 feet below previous ground surface, or approximately 3-inches into the underlying native soil. The excavation removed the vadose zone, capillary fringe, and upper portion of the saturated surficial aquifer (Figure 5). The excavation extended horizontally to the adjacent rights of ways and adjacent properties, while maintaining a safe-slope to prevent undercutting adjacent features (Appendix A, Photo Nos. 9-18). Excavated material was transported to the Waste Management solid waste landfill in Whitelaw, Wisconsin for disposal and landfill tickets confirm the excavation yielded 4,369.49 tons of material (approximately 2,442 cubic yards). Landfill tickets are provided in Attachment B.

Post-Excavation Soil Sampling - Methods. Soil/fill samples were collected by Stantec personnel from the sidewalls and the floors of the excavation to confirm soil quality upon completion of the excavation (Appendix A, Photo Nos. 19-22). The granular fill unit remaining along the sidewalls was preferentially sampled from the sidewall to represent “worse case” soil conditions, as the granular fill unit was previously demonstrated to

Reference: Interim Construction Documentation Report – Removal of Impacted Fill Material, River Point District – Former Junk Yard Area; 1050 York Street, Manitowoc, Wisconsin

have the greatest impacts to soil. Sample locations are illustrated on Figure 5 relative to excavation depths and include 21 samples collected from the sidewall of the excavation (sample ID's with an "EX" prefix) and 8 samples collected from the underlying native material on the floor of the excavation (sample ID's with a "FL" prefix).

For clarification, the soil sample identified as "FL9" in the laboratory report (Attachment C) was actually taken from the black granular fill on the bottom of the toe-slope of the excavation sidewall (Attachment A, Photo Nos. 21-22). Therefore, the results are reflective of the sidewall of the excavation; as such, the soil sample was renamed "FL21" on Table 1 and Figure 6.

Soil samples were logged and screened in the field by Stantec personnel. Soil samples selected for analysis were placed directly into laboratory-supplied containers, preserved as appropriate, and immediately placed in a cooler on ice for shipping to Eurofins Environment Testing North Central, LLC (Chicago, Illinois), under a chain of custody for analysis. Soil sample analyses included VOCs (EPA 8260B), PAHs (EPA 8270D), PCBs (EPA 8082A), and RCRA metals (EPA 6010C, 7471B). The laboratory report is provided as Appendix C. Detected constituents in soil are compared to RCLs on Table 1.

Post-Excavation Soil Sampling – Results. Remaining VOC impacts to soil were evaluated in the field using a photoionization detector (PID) calibrated to a 100 parts per million isobutylene standard. The greatest PID measurement was recorded at EX18, which had a PID reading value of 3 instrument units and corresponded to a weathered petroleum odor, which is consistent with prior work along the southeastern property boundary. Additional faint petroleum odors were also observed at EX12 and FL7. No other post-excavation soil samples had a notable odor.

As summarized on Table 1, concentrations of constituents in the fill/soil remaining along the excavation sidewalls (EX1 through EX21) exceed one or more RCLs. However, given the grade difference between the Remediation Area and the adjacent properties, the excavation could not be advanced further horizontally. Please note however that impacted fill at depth extending beyond the Remediation Area in the River Point District is capped with more than three feet of clean granular fill and finished with associated hardscape surfaces (i.e., roadway and concrete paved sidewalk). Therefore, impacted fill at depth does not appear to pose a risk to human health.

The mean concentrations of residual constituents in fill are significantly less compared to mean constituent concentrations measured in fill/soil during the assessment phase of the project indicating the greatest impacts have been removed. Additionally, this activity removed an estimated 35 tons of COCs from the Remediation Area (Table 2). Finally, the concentrations of detected constituents in samples of native soil taken from the base of the excavation (FL1 through FL8) are less than applicable RCLs. Therefore, this remediation action has achieved the remedial objective of source control by reducing the mass of residual contamination at the Property.

Constructing an Interim Engineered Barrier. The excavation was backfilled with clean imported fill sourced from the local Vinton quarry (Appendix A, Photos 23-30) to match the surrounding grade and the project area was seeded. The ground surface of the Remediation Area was surveyed by a Stantec registered land surveyor and the finished elevation contours of the ground surface relative to the pre-remediation ground surface (in grey text) are illustrated on Figure 7.

As illustrated on Figure 6, backfilling the excavation to grade added sufficient clean fill above the remaining impacted fill along the sidewall of the excavation to create an engineered barrier sufficient to prevent direct

Reference: Interim Construction Documentation Report – Removal of Impacted Fill Material, River Point District – Former Junk Yard Area; 1050 York Street, Manitowoc, Wisconsin

contact with remaining impacts during interim use of the Property for greenspace. Future redevelopment at the Property is likely to include construction of hardscaped features (e.g., building slab, parking lot, sidewalks, etc.) which will further strengthen the cap.

NEXT STEPS

Pursuant to the Stantec (2023) ABCA, Stantec will install a replacement groundwater monitoring well at MW-92 and MW-89 in the Fall of 2023. An additional well will be installed in the northeast corner of the Remediation Area. Groundwater samples will be collected to further investigate dissolved arsenic and PAHs in groundwater. Groundwater may also be sampled for per and poly-fluorinated alkyl compounds.

Once a developer is identified, a RAP/MMP specific to the proposed reuse will be developed and a new BRRS case will be established to facilitate redevelopment of the Property.

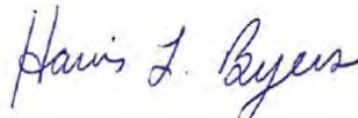

We recommend submitting a copy of this letter to WDNR for project documentation.

Receipt

The samples were received on 4/1/2023 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.9° C and 2.3° C.

GC/MS VOA

Method 8260B: The laboratory control sample (LCS) for 705922 and 705921 recovered outside control limits for many analytes. This is a prepped 5035 LCS. All daily instrument LCSs were acceptable to continue with analyses, and the data have been reported. EX1 (500-231568-1), EX2 (500-231568-2), EX3 (500-231568-3), EX4 (500-231568-4), EX5 (500-231568-5), FL1 (500-231568-6), EX6 (500-231568-7), EX7 (500-231568-8), FL2 (500-231568-9), EX8 (500-231568-10), FL3 (500-231568-11), EX9 (500-231568-12), FL4 (500-231568-13), FL5 (500-231568-14), EX10 (500-231568-15), FL6 (500-231568-16), EX11 (500-231568-17), EX12 (500-231568-18), EX13 (500-231568-19), EX14 (500-231568-20), EX15 (500-231568-21), EX16 (500-231568-22), EX17 (500-231568-23), EX18 (500-231568-24), EX19 (500-231568-25), FL8 (500-231568-26), FL9 (500-231568-27), EX20 (500-231568-28), FL7 (500-231568-29) and TRIP BLANK (500-231568-30)

Method 8260B: The laboratory blank for 705921 contained analytes above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. EX1 (500-231568-1), EX2 (500-231568-2), EX3 (500-231568-3), EX4 (500-231568-4), EX5 (500-231568-5), FL1 (500-231568-6), EX6 (500-231568-7), EX7 (500-231568-8), FL2 (500-231568-9), EX8 (500-231568-10), FL3 (500-231568-11), EX9 (500-231568-12), FL4 (500-231568-13), FL5 (500-231568-14), EX10 (500-231568-15), FL6 (500-231568-16), EX11 (500-231568-17), EX12 (500-231568-18), EX13 (500-231568-19) and EX14 (500-231568-20)

Method 8260B: The laboratory control sample (LCS) for preparation batch 500-705921, 500-705921, 500-705921, 500-705921, 500-705921 and 500-705921 and analytical batch 500-706768 recovered outside control limits for the following analytes: Bromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270E: The matrix spike and matrix spike duplicate (MS/MSD) recoveries for preparation batch 500-706755 and analytical batch 500-707068 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8082A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 500-707270 and analytical batch 500-708024 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8082A: DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: EX1 (500-231568-1), EX2 (500-231568-2), FL1 (500-231568-6), EX10 (500-231568-15), EX11 (500-231568-17), EX14 (500-231568-20), (500-231568-C-1-E MS) and (500-231568-C-1-F MSD). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: Tetrachloro-m-xylene surrogate recovery for the following sample was outside control limits: FL4 (500-231568-13). DCB Decachlorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: The %RPD between the primary and confirmation column exceeded 40% PCB-1260 for the following sample: EX15 (500-231568-21). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

Method 8082A: DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: EX15 (500-231568-21) and (MB 500-707513/1-A). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not

Method 8082A: Tetrachloro-m-xylene surrogate recovery for the following sample was outside control limits: EX19 (500-231568-25). DCB Decachlorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: EX3 (500-231568-3), EX4 (500-231568-4), EX5 (500-231568-5) and EX6 (500-231568-7). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: The following sample required a dilution due to the nature of the sample matrix: EX18 (500-231568-24). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8082A: The following sample was diluted due to the nature of the sample matrix: EX18 (500-231568-24). Elevated reporting limits (RLs) are provided.

Method 8082A: The following sample required a dilution due to the nature of the sample matrix: EX12 (500-231568-18). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
