Subject: RE: Georgia-Pacific Green Bay Broadway - PFAS Groundwater Monitoring Results

Melissa,

DNR considers it acceptable to abandon monitoring well MW-20-01 due to this monitoring well being in an area of planned excavation activities. It is noted that the PFAS groundwater concentrations in MW-20-01 are low, however still above the recommended PAL for the combined PFAS compounds.

Depending on the future groundwater results from the remaining monitoring well network, a replacement well may have to be installed in the vicinity of MW-20-01 at some point.

Let me know if we need to discuss anything further.

-Keld

Keld – please see attached letter containing the PFAS analytical results from the groundwater monitoring wells collected from the Georgia-Pacific Green Bay Broadway site in September 2021. This letter also contains the request to abandon groundwater monitoring well MW-20-01. This letter will be uploaded to the BRRTS Site. Please let me know if a hard copy of this letter needs to be submitted to you.

Please let me know if there are any questions regarding these sampling results.

Thanks,

Melissa Mrotek
