Subject: SRC 12/31/20 Hydraulic Oil Release Additional Information

Hi Jeff,

Per your email earlier today I have provided more information for the bullet points you outlined in your email. My responses can be seen as sub-bullets below.

- A brief description of the spill and what happened, roughly how many gallons were spilled
 - On 12/31/20 at 7:30am a hydraulic line on a concrete conveyor failed resulting in a release of approximately 20 gallons of hydraulic oil onto the frozen ground.
- Activities that were completed to remediate the spill
 - Crews onsite immediately began cleaning up the released hydraulic oil and the contaminated soil/snow it impacted. This was done with a combination of a skid steer and hand shovels. Remediated soil was brought to an onsite contaminated soil storage building for future disposal.
- How big was the excavation/affected area
 - The affected area was roughly 25ft² (5′ x 5′ square under the conveyor) but crews extended their remediation scraping to roughly 100ft² (10′ x 10′ square) to be conservative. Since the ground was frozen at the time of the release and the hydraulic oil did not permeate into the soil, a scraping effort only a few inches deep was all that was needed to clean up the released material.
- What confirmation was completed to make sure that all the hydraulic oil was excavated, etc. Was it mostly visual?
 - Cleanup efforts were guided visually since the dark oil contrasted with the light brown soil and white snow. I went to the area the following Monday (1/4/21) to confirm that the released hydraulic oil had been completely cleaned up. While I didn't seen any signs of remaining oil, I requested another round of scraping be done before work in the area could continue. This was completed that day (1/4/21) and the newly scraped soil/snow was brought to the contaminated soil building for disposal.

Please let me know if you have any more questions!

Thanks

Matt Turner

Attachments: SRC - Lakehead Shamrock Manifests 2021.01.07.pdf; SRC - Lakehead

Shamrock Manifests 2021.01.08.pdf

Hi Jeff,

As discussed during our initial call following our recent release of \sim 20 gallons of hydraulic oil, the remediated soil was stored in an onsite contaminated soils building for future disposal. This past Thursday (1/7/21) and Friday (1/8/21), the stored soil was sent to the Shamrock landfill via several dump truck shipments.

Since we pile all of our contaminated soil in the same building, I have attached our waste disposal shipping manifests from those two days for your records as confirmation that the soil remediated from our release was disposed of properly. As I mentioned on our call, we estimated that the remediated soil volume was 1-2 yards.

Is there anything else you need from our end to close this site?

Let me know if you have any questions!

Thanks

Matt Turner

Subject: 12/31/20 Superior Refinery Hydraulic Oil Release

Attachments: Removed Soil.jpg; Release Location.png

Hi Jeff,

Per our conversation this morning, I've attached a few photos relating to our hydraulic oil spill on 12/31/20.

- The first photo shows the soil removed during cleanup that is currently awaiting disposal in our onsite contaminated soil building. You can see that the fresh brown soil is roughly 1-2 yards in total and was placed on top of an existing pile. Once we send it offsite for disposal at the Shamrock landfill, I'll send you a disposal manifest for your records.
- The second photo is a Google Earth screen shot of the release location. I know I directed you to the
 area on the phone but I wanted to make sure you have the correct location if my description wasn't
 helpful.

Please let me know if you need anything else from our end to have this spill site closed out. It was nice to meet you this morning and I look forward to working with you going forward!

Thanks

Matt Turner
