Subject: RE: Notice to Proceed: Downstream of Hayton Millpond Dam (02-08-587108)

Chris and Jason-

Thank you for your submittal of the SIR data for HARP Downstream of the Hayton Millpond Dam (02-08-287108). Please use the submittal portal for future document submission (<https://dnr.wi.gov/topic/Brownfields/Submittal.html>).

Please confirm that these results were also sent to the property owners/occupants.

Future data tables should include the appropriate standards for comparison based on designation as soil, sediment, or surface water.

The site investigation report should include photos and descriptions of the sediment grab and core samples. The draft figures 2a and 2b have several sample depths identified with no results, ensure that discussion includes clarification why there are sample depths without results.

The site investigation report is expected no later than January 5, 2024.

Thank you,
Sarah

We are committed to service excellence.

Chris and Sarah,

I made two changes to the attached form. I changed my contact phone number and the official name of TPC should be Tecumseh Products Company LLC. Thanks.

Sarah,

Good afternoon. I am providing you with the analytical results for the Downstream of Hayton Millpond Dam project. I will send over two separate emails due to size.

On another note – the fish tissue sample results are behind schedule. We have been told by the laboratory that we will receive all results by mid-December.

If you have any questions or comments, please contact me at 312-909-0043.

Thank you,
Chris

Sarah,

Good afternoon. I wanted to give you a status update and heads up.

We finished the sampling activities in September 2023. We have been receiving analytical results/data over the past couple of weeks and receiving more each week. We are in the process of reviewing and quality checking the data, as well as tabulating and mapping it.

I will start sending the data to you once it has been reviewed, confirmed and tabulated/mapped.

Thank you,
Chris

Subject: Notice to Proceed: HARP Downstream of Hayton Millpond Dam (02-08-587108)

Carrie and Sarah,

I am providing notice to WDNR that on Monday, September 11, TRC will start the downstream sampling activities in accordance with the Site Investigation Work Plan Downstream of Hayton Dam. We expect this sampling effort to take 5 or 6 field sampling days.

In addition, TRC will also be completing the long-term sediment sampling and surface water sampling during the week of September 11.

If you have any questions, please contact me at 312-909-0043.

Chris

Sarah,

Good morning. For Downstream of Hayton Millpond Dam Site Investigation Work Plan, please see the attached figure showing the proposed updated sediment sampling locations after our sediment poling and geomorphic evaluation.

Please let me know if you have any questions or comments.

Thank you,
Chris

Jason and Chris,

DNR has reviewed the Natural Recovery Monitoring Plan for Fish Tissue Monitoring Revision 2, the Natural Recovery Monitoring Plan for Surface Water and Sediment Revision 4, the Site Investigation Work Plan Revision 5, and the Quality Assurance Project Plan Revision 4, all dated January 27, 2023. The comments and conditions from the November 28, 2022 Letters for each associated document have been addressed with one exception.

The Natural Recovery Monitoring Plan for Fish Tissue Monitoring Revision 2, section 4.1, the minimum completeness goal still indicates that there will be 3 individual fish making up each sample for common carp. The word “composite” was removed in the revision for the minimum completeness goal but the remainder of the language should be updated we assume to state, “Five **individual** samples of three fish each for common carp, i.e., ~~each sample will be comprised of three fish each.~~” Please confirm what the minimum completeness goal is for common carp before implementing the fish tissue sampling.

We anticipate that Figure 2 from the Site Investigation Work Plan Revision 5 will be updated following the finalization of sampling locations and geomorphic evaluation, please note that the symbol for the TRC sediment sampling/transect location (August 2015) is not visible on the figure outside of the legend.

We also anticipate a finalized Figure 2 from the Natural Recovery Monitoring Plan for Surface Water and Sediment Revision 4 may be necessary following the geomorphic evaluation.

Please note that I will be on leave (expected to start in June) and unable to participate in the field effort this spring and summer. Meanwhile, please copy Carrie Webb (copied) on communications as she will be the main point of contact in my absence.

If you have any questions or concerns, please reach out to us.

Thank you,
Sarah
