Subject: Marinette Marine Building 34 (BRRTS # 02-38-587281) - SIR Review

Dave,

I am working on reviewing the site investigation report for the Marinette Marine Building 34 case.

One of the recommendations in the report is that the DNR consider the materials management conducted during the construction of building 34 be considered an interim action. In order to consider the construction-related materials management an interim action, a documentation report is required. Has a materials management documentation report been submitted to document that work? I looked through the file and did not locate anything. I want to make sure all the loops are closed when it comes time for closure.

Thanks,
Dave

Dave,

Thank you for taking the time to speak with me yesterday. As we discussed, the DNR will require additional information to complete the review of the site investigation report (SIR) and determine if the site investigation is completed.

- 1) The historic Phase II/site investigation reports referenced in the SIR and included as in appendices should be submitted to the DNR as standalone documents for inclusion in the file.
- 2) Laboratory analytical data from the historic Phase II/site investigation reports should be incorporated into the tables and figures within the SIR.
- 3) Submit a report documenting the materials management actions taken in relation to the approved Materials Management Plan for the site.

If there are any questions or concerns, please feel free to reach out.

Thanks,
Dave
