Re: Additional Groundwater Monitoring Results  
Oshkosh Defense West Plant  
500 Waukau Avenue  
Oshkosh, Wisconsin  
WDNR BRRTS No. 02-71-587406

Dear Mr. McKnight:

GZA GeoEnvironmental, Inc. (GZA), on behalf of Oshkosh Defense LLC (Oshkosh), is submitting additional groundwater monitoring results that were collected from the monitoring well network installed at the West Plant at 500 West Waukau Avenue in Oshkosh, Wisconsin ("Site"). In the Revised Site Investigation Report (SIR), dated February 21, 2023,<sup>1</sup> two additional groundwater sampling events were proposed to evaluate the seasonal variability, stability, and/or attenuation of per- and polyfluoroalkyl substances (PFAS) detected in groundwater.

On March 23 and July 10, 2023, groundwater samples were collected from Site monitoring wells MW-1 through MW-4 using low-flow sampling techniques. The wells were purged with a peristaltic pump equipped with a flow-through cell and multimeter to measure field parameters for temperature, pH, conductivity, dissolved oxygen, oxidation-reduction potential, and turbidity. The wells were purged in accordance with the Wisconsin Department of Natural Resources' (WDNR) Groundwater Sampling Field Manual (RR-037) until the field parameters stabilized. Following stabilization, the tubing was disconnected from the flow-through cell and the samples were collected in laboratory-supplied sample containers. The samples were placed on ice in an insulated cooler and shipped to Pace Analytical® in West Columbia, South Carolina for analysis of the Wisconsin List of 33 PFAS by isotope dilution.

The results of the groundwater samples collected at the Site during these two events and the previous events are summarized in the attached **Table 1** and the laboratory analytical reports are provided in **Attachment 1**. Depth to water measurements and the resulting groundwater elevations are provided in **Table 2**. **Figure 1** is a Site Plan that shows the location of the monitoring wells at the West Plant site.

The results of the groundwater sampling show a general consistency in detected PFAS and respective concentrations with the previous sampling events. However, fluctuating concentrations can be observed between the March and July 2023 sampling events with groundwater levels fluctuating over the same interval. The groundwater elevations were observed in March 2023 to be elevated by approximately 4.5 feet to over 7 feet in Site monitoring wells in comparison to the July sampling event when groundwater levels were similar to the August 2022 sampling event. In

<sup>1</sup> *Revised Site Investigation Report, Oshkosh Defense West Plant Site, 500 West Waukau Avenue, Oshkosh, Wisconsin, BRRTS No. 02-71-587406*, dated February 21, 2023, GZA File No. 20.0157080.00.

November 28, 2023  
File No. 20.0157080.00  
Additional Groundwater Monitoring Results  
Page | 2

each of the events thus far, groundwater flow direction was consistently observed to be to the east/northeast. Ongoing monitoring events will aid in establishing the validity of the seasonal variation observed.

Based on the results of the two additional groundwater sampling events, Oshkosh proposes to continue groundwater monitoring to establish trends to demonstrate the stability of PFAS concentrations within the shallow groundwater flow system. As of this letter, a minimum of three monitoring events were performed at each well with monitoring well MW-1 having been sampled for five sampling events. Oshkosh proposes to perform additional groundwater sampling events for laboratory analysis of the Wisconsin List of 33 PFAS and submit sample results to the WDNR. The next sampling event will be in November 2023.

The results of these sampling events will be provided to the WDNR by letter as the results are received and evaluated. If you have questions about the results or proposed groundwater sampling plan, please feel free to contact Kevin Hedinger at (262) 754-2578 or by email at [kevin.hedinger@gza.com](mailto:kevin.hedinger@gza.com).

Sincerely,

## Case Narrative GZA GeoEnvironmental, Inc. Lot Number: YC25011

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples were compliant with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). The CF is calculated as follows:

$$CF = DF * FV / V_0$$

FV is volume of extract (mL)

V<sub>0</sub> is initial sample volume (mL)

DF is dilution factor. For undiluted analysis, DF = 1.

Sample concentration for aqueous samples:

$$\text{Concentration (ng/L)} = C_s * CF,$$

$$C_s = \frac{\left( \frac{(A_{sX}C_{is})}{A_{is}} \right) - B}{M1}$$

Where

C<sub>s</sub> is on column concentration of target analyte in the sample (ng/L)

C<sub>is</sub> is concentration of internal standard in the sample (ng/L)

A<sub>s</sub> is peak response of target analyte in the sample

A<sub>is</sub> is peak response of internal standard in the sample

M1 is the average RF from ICAL or the slope from linear regression ICAL

B is the y-intercept from the ICAL

LOQ = Limit of Quantitation

B = Detected in the method blank

E = Quantitation of compound exceeded the calibration range

DL = Detection Limit

Q = Surrogate failure

ND = Not detected at or above the DL

N = Recovery is out of criteria

P = The RPD between two GC columns exceeds 40%

J = Estimated result < LOQ and ≥ DL

L = LCS/LCSD failure

H = Out of holding time

W = Reported on wet weight basis

S = MS/MSD failure

<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 6. Were sample IDs listed on the COC and all sample containers?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 7. Was collection date & time listed on the COC and all sample containers?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 8. Did all container label information (ID, date, time) agree with the COC?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 9. Were tests to be performed listed on the COC?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 10. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 11. Was adequate sample volume available?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 12. Were all samples received within ½ the holding time or 48 hours, whichever comes first?		
<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No 13. Were all samples containers accounted for? (No missing/excess)		
<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> NA 14. Were VOA, 8015C and RSK-175 samples free of bubbles >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?		
<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> NA 15. Were all DRO/metals/nutrient samples received at a pH of < 2?		
<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> NA 16. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?		
<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> NA 17. Were all applicable NH <sub>3</sub> /TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?		
<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> NA 18. Was the quote number listed on the container label? If yes, Quote #		

### Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, HCl, NaOH using SR # NA. Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (if #19 is no) and were adjusted accordingly in sample receiving with sodium thiosulfate (Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>) with Unique ID: NA.

NC DENR No: 329

NC Field Parameters No: 5639

## Case Narrative GZA GeoEnvironmental, Inc. Lot Number: YG11006

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.4 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples were compliant with DOD QSM 5.4 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). The CF is calculated as follows:

$$CF = DF * FV / V_0$$

FV is volume of extract (mL)

V<sub>0</sub> is initial sample volume (mL)

DF is dilution factor. For undiluted analysis, DF = 1.

Sample concentration for aqueous samples:

$$\text{Concentration (ng/L)} = C_s * CF,$$

$$C_s = \frac{\left( \frac{(A_s \times C_{is})}{A_{is}} \right) - B}{M1}$$

Where

C<sub>s</sub> is on column concentration of target analyte in the sample (ng/L)

C<sub>is</sub> is concentration of internal standard in the sample (ng/L)

A<sub>s</sub> is peak response of target analyte in the sample

A<sub>is</sub> is peak response of internal standard in the sample

M1 is the average RF from ICAL or the slope from linear regression ICAL

B is the y-intercept from the ICAL

Pace is a TNI accredited laboratory; however, the following analyses are currently not listed on our TNI scope of accreditation: Drinking Water: VOC (excluding BTEX, MTBE, Naphthalene, & 1,2-dichloroethane) EPA 524.2, E. coli and Total coliforms SM 9223 B-2004, Solid Chemical Material: TOC Walkley-Black, Biological Tissue: All, Non-Potable Water: SGT-HEM EPA 1664B, Silica EPA 200.7, Boron, Calcium, Silicon, Strontium EPA 200.8, Bicarbonate, Carbonate, and Hydroxide Alkalinity SM 2320 B-2011, SM 9221 C E-2006 & SM 9222D-2006, Strontium SW-846 6010D, VOC SM 6200 B-2011, Fecal Coliform Colilert-18, PFAS by Isotope Dilution SOP.

Pace is a DoD/DoE and TNI accredited laboratory; however, Pace is not accredited for PFAS Direct Aqueous Injection or Method D8421.

If you have any questions regarding this report, please contact the Pace Project Manager listed on the cover page.

## PFAS

Surrogate recovery for the following samples was outside the upper control limit: YG11006-001, YG11006-002. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Surrogate recovery for the following samples was outside the upper control limit: YG11006-004, YG11006-005, YG11006-006. This sample did not contain any target analytes >1/2 LOQ; therefore, re-extraction and/or re-analysis was not performed.

LOQ = Limit of Quantitation

B = Detected in the method blank

E = Quantitation of compound exceeded the calibration range

DL = Detection Limit

Q = Surrogate failure

ND = Not detected at or above the DL

N = Recovery is out of criteria

P = The RPD between two GC columns exceeds 40%

J = Estimated result &lt; LOQ and ≥ DL

L = LCS/LCSD failure

H = Out of holding time

W = Reported on wet weight basis

S = MS/MSD failure

### Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, HCl, NaOH using SR # NA. Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is no) and were adjusted accordingly in sample receiving with sodium thiosulfate (Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>) with Unique ID: NA.
