File: 193708490

**Attention: Alex Allie and Peter Allie**  
River North, LLC  
100 Maritime Drive, Suite 3C  
Manitowoc, WI 54220

Dear Mr. Alex Allie and Mr. Peter Allie,

**Reference: Construction Documentation Report – Removal of Petroleum Impacted Soil  
River North, LLC Project Area  
1000 River Point Drive  
Manitowoc, Wisconsin  
BRRTS ID: 02-36-588366 (Open ERP)  
Stantec Project #: 193708211**

This letter summarizes the remedial work completed in the Fall of 2021 at the River North multi-family residential apartment building recently constructed at 1000 River Point Drive within the River Point District in Manitowoc, Wisconsin (herein referred to as the “Property”). The location of the River Point District and the Property are outlined in grey and yellow, respectively, on **Figure 1** and **Figure 2**. The open Wisconsin Department of Natural Resources (WDNR) Bureau for Remediation and Redevelopment Tracking System (BRRTS) case number associated with the River North, LLC project area is 02-36-588366. The cleanup work was completed in part using funds provided to River North, LLC from the Wisconsin Economic Development Corporation (WEDC) under a brownfield cleanup grant.

## **BACKGROUND**

Residual environmental impacts are present on the Property and likely associated with the placement of fill in the late 19<sup>th</sup> Century and the storage/handling/use of hazardous substances and/or petroleum by multiple prior owners/tenants, as summarized in the Stantec (2021a) Phase I environmental site assessment (ESA). The most significant soil impacts at the Property are benzene, polycyclic aromatic hydrocarbons (PAHs), and heavy metals associated with black granular fill materials extending across the River Point District and onto the Property. Residual petroleum impacts (primarily benzene) were identified in groundwater on the Property (Stantec, 2021c) and are delineated on **Figure 3** as dashed red and purple lines.

To actively reduce the long-term risks to groundwater and the potential for vapor intrusion into the apartment building, the Stantec (2021b) Remedial Action Plan and Material Management Plan (RAP/MMP) recommended voluntary removal of petroleum impacted soil with the greatest residual impacts from the redevelopment area.

## **REMOVAL OF PETROLEUM IMPACTED SOIL**

As described below, petroleum impacted soil removal consisted of two primary tasks.

Reference: Construction Documentation Report – Removal of Petroleum Impacted Soil; River North, LLC Project Area; 1000 River Point Drive; Manitowoc, Wisconsin

**Task 1. Further Delineation of Residual Petroleum Soil Impacts.** Mammoth Construction Co. completed 19 test pits to three feet below ground surface to further delineate residual petroleum impacts at the Property. The locations of the test pits are illustrated on Figure 3 (Figure 3). Petroleum impacts to soil in the test pits were evaluated using a photoionization detector (PID) calibrated to a 100 parts per million isobutylene standard. The greatest PID measurements at each test pit location are notated on **Figure 3**. The test pits were installed in a phased manner radially outward from the most impacted well (MW-62) until de minimis PID measurements and no petroleum odors were encountered.

Of additional note, an apparent continuous pipe was encountered in Test Pit D and Test Pit I (Attachment A, Photo 7). The pipe and fill surrounding the pipe were removed from the Property.

**Task 2. Removal of Petroleum Impacted Soil.** A total of 781.09 tons of petroleum-impacted soil (delineated by the yellow polygon on **Figure 3** based on the results of Task 1) was excavated to a depth of ~3 feet to fully remove the vadose zone and capillary fringe (and saturated upper aquifer material, in some locations). Material was transported offsite for disposal at the Waste Management solid waste landfill in Whitelaw Wisconsin. Landfill tickets are provided in Attachment B. As this removal was voluntary, confirmation samples were not collected.

## NEXT STEPS

Pursuant to the Stantec (2021c) RAP/MMP, after impacted soil was excavated, the remaining ground surface was rough graded and a sub-slab depressurization system (SSDS) installed as part of construction. Construction of the building is complete and a detailed description of the engineered barriers and construction of the SSDS will be transmitted to the WDNR in a separate letter report.

We recommend submitting a copy of this letter to WDNR for project documentation.

Regards,
