Hi Karl,

The Northern Region Peer Review Group met last Thursday to discuss the terminal PFAS work plan. Attached is a letter approving the next phase of work. The comments are very similar to the last approval. Please contact me if you have any questions.

Thanks.

Dear Mr. Beaster,

The Wisconsin Department of Natural Resources (DNR) has completed a review of the *PFAS Site Investigation Work Plan – Supplement #2* (SIWP), prepared by AECOM and submitted to the DNR on May 8, 2024. The SIR was prepared for the Enbridge Energy Superior Terminal site located at 2800 East 21<sup>st</sup> Street, Superior, Wisconsin (Site). On May 31, 2024, the DNR received the appropriate technical assistance fee per Wisconsin Administrative (Wis Admin.) Code ch. NR 749 for review of the SIR.

The SIWP proposes additional assessment of the stormwater ponds and the stormwater conveyance system. The DNR approves the SIR and has the following comments that can be addressed during future site investigation work at this Site:

- The DNR recommends groundwater at the site be investigated for PFAS during a subsequent iteration of site investigation. The DNR suggests the existing monitoring well network could be used to monitor groundwater for PFAS.
- Wis. Admin. Code ch. NR 716 requires the definition of the degree and extent of contamination in all affected media. It has not yet been proposed how the lateral extent of contamination will be defined. Since this is a relatively unique situation involving discrete, bermed and ditched drainage areas, the DNR recommends discussing options for meeting the requirements of Wis. Admin. Code ch. NR 716.
- The DNR recommends expanding the surface water investigation to include surface water sampling of the Nemadji River.

The DNR appreciates the work Enbridge is conducting to complete a PFAS investigation at the Enbridge Energy Superior Terminal. Please contact me at [John.Sager@Wisconsin.gov](mailto:John.Sager@Wisconsin.gov) or (715) 919-7239 if you have any questions.

Sincerely,

  
John Sager
