

Notice: Pursuant to ss. 292.13 and 292.55, Wis. Stats., this application must be completed to request a written determination from the Department of Natural Resources (DNR) for the off-site liability exemption or for the liability clarification regarding property affected by an off-site discharge. The Department will not consider, or act upon your application unless all sections are completed on this form and the required fee of \$700, required under ch. NR 749, Wis. Adm. Code is included. Personal information collected will be used for administrative purposes and may be provided to requester's to the extent required by Wisconsin's Open Records law [ss. 19.31 - 19.39, Wis. Stats.]

Definitions:

"Off-Site Exemption" refers to a statutory limit on liability available to a person with respect to the existence of a hazardous substance in the groundwater or soil, including sediments, on Property possessed or controlled by the person, as provided in s. 292.13, Wis. Stats. The off-site exemption is available only to persons who possess or control the affected property, who meet the requirements and criteria in the statutes. DNR provides a written determination regarding liability upon submittal of this application and the required fee.

"General Liability Clarification" refers to a written determination by the Department, as provided in s. 292.55, Wis. Stats., that clarifies the environmental liability of a person, business or another party for a specific situation. General liability clarifications can be provided in situations when the party requesting the clarification does not meet one of the requirements for the off-site exemption at the time of the application submittal, for example, does not yet own the off-site property. This application form should be used to request a written liability clarification **for property affected by an off-site discharge.**

"Property" refers to the subject property that has been impacted by hazardous substances that migrated there from a different property containing the original contamination source. The subject property is often referred to as an "off-site" or "off-source" property.

"Possession or control" refers to holding title to the property or exercising possession or control over the property by some other means, such as a lease.

[NOTE: a person with an easement doesn't have possession or control over the property; the property owner just allows the person to use part of the property for a limited purpose].

Instructions:

- Use this application to request a written determination from the Department for the off-site liability exemption or for the liability clarification regarding **property affected by an off-site discharge.** See DNR's Fact Sheet: "When Contamination Crosses a Property Line - Rights and Responsibilities of Property Owners Off-Site Limited Liability Exemption" ([RR-589](#)) for general information on eligibility requirements, liability clarification letters related to the off-site liability exemption, and property owner responsibilities. Information and these publications are available by contacting a [DNR office](#) or on the Internet at: <http://dnr.wi.gov/topic/Brownfields>.
- Complete the application and include the information that adequately shows that the required criteria are met. See Section 7 on page 4.
- Include a \$700 fee payment with this application, in accordance with ch. NR 749, Wis. Adm. Code.
- Send the completed application, fee, and supporting materials to the DNR regional office where the Property is located, as listed on page 6. Contact the person listed with any questions.
- Department staff will make every attempt to provide timely written determinations. However, the time required for the determination varies depending on the complexity of the site, and the clarity and completeness of the application and supporting documentation.
Do not use this application form to request liability clarifications for properties without off-site contamination. Contact one of the DNR regional offices or see the DNR website on the Internet for more information.

1. Applicant information for person requesting the determination.

Off-Site Liability Exemption and Liability Clarification Application

Form 4400-201 (R 05/19)

Page 2 of 6

2. Applicant eligibility for off-site exemption or off-site liability clarification.

Request one determination based on whether the requirements for the off-site exemption are currently met. *See page 5 and sign the appropriate certification.*

Off-Site Discharge Exemption – I "possess or control" the Property and I believe I meet the criteria for an off-site exemption. I request an off-site exemption letter.

I have completed Section 8a on page 5.

As the applicant, I am:

Current owner

Other* Explain your relationship to the Property or the nature of your possession or control of the Property:

*Additional documentation may be requested by the DNR to verify the applicant's possession or control of the Property. For example, if a lessee requests a determination, DNR would need a copy of the lease by which to assess whether the lessee possesses or controls the Property.

Off-site Liability Clarification – I lack one or more of the requirements for the off-site exemption as shown below. I request a liability clarification letter that explains which conditions must be met in order to qualify for the off-site liability exemption.

I have completed Section 8b on page 5.

Requirements for the off-site exemption that are missing:

1. Currently I do not possess or control the Property and

I plan to buy the Property on _____ (Date) or

I plan to lease the Property on _____ (Date) .

2. Currently no contamination has been detected on the Property but there is credible evidence that contamination has migrated onto the Property.

3. Multiple contiguous properties are believed to be affected by contamination from a known source.

4. Other: Explain the circumstances here or in an attachment.

3. Information on additional parties.

Check the appropriate box to have a copy of the determination letter sent to one or more of these parties:

I request that DNR provide a copy of the Liability Clarification Letter to the current owner.

Current Owner (if different than applicant) Last Name				First		MI
Address				City		State
Phone Number (include area code)		Fax Number (include area code)		E-Mail Address		

5. Information about contamination on the impacted Property.

A. Have hazardous substances been detected on the Property or Properties?

No. If not, explain why contamination is suspected on the Property or Properties in an attachment or here:

Yes. Check all that apply: Groundwater Soil Sediment Other, describe: _____

B. Has the presence of contamination been reported to any State or local governmental agency?

No.

If yes, check all that apply: DNR

Date Reported

08/28/2008

Division of Emergency Government

Commerce

Department of Agriculture, Trade and Consumer Protection (DATCP)

Other, describe: _____

C. Is the source of the contamination known? Check only one.

No.

Yes. If yes, what is the source of the contamination?

Former Dry cleaners (02-45-552222)

Provide the name and address of the owner of the contamination source or source property, if known.

Owner Name

Sandies Dry Cleaners & Laundry (Former)

Address				City		State	ZIP Code
513 Grand Ave				Little Chute		WI	54140

Suspected. If suspected to be migrating from a nearby source, what is the source and its address?

Provide the name of the owner of the suspected contamination source or source property, if known.

Owner Name

Address				City		State	ZIP Code

6. Specific liability clarification questions relating to off-site contamination.

- I have no additional liability clarification questions.
- I request a DNR response to the questions provided to clarify my liability for the cleanup of off-site contamination to be included in the written determination (questions should be provided here or in an attachment) :

7. Property information needed for the determination of off-site exemption or off-site liability clarification.

DNR requires adequate information in order to make the determination requested in this application. Incomplete or inadequate information will delay the completion of the determination. DNR has the authority to request additional information, if needed. Include the following information with the application, if appropriate:

1. Map(s) showing Property location(s) and any suspected or known off-site contaminant source properties.
2. For any environmental data submitted, include:
 - a) Property map(s) showing sampling locations for all data submitted;
 - b) Interpretation of data signed by a qualified environmental professional, including data tables and figures that include data;
 - c) Soil boring logs;
 - d) Groundwater monitoring well construction, development and sampling logs;
 - e) Laboratory-provided data reports;
 - f) Survey information for groundwater elevations;
 - g) Chain of custody forms for all samples; and
 - h) Description of sample collection methods.

The submitted materials should document that the statutory criteria are satisfied regarding the contamination and its source as listed in A through C below.

- A. Document that there is hazardous substance contamination present in soil, groundwater and/or sediment on the Property or Properties. Examples of information include: Analytical results and interpretations for samples collected from soil, groundwater, and/or sediment on the Property, or at or near the Property line, that conclusively document the presence of a hazardous substance in one or more of these media on the Property. This information could be documented in a Phase II Environmental Assessment report, or could refer to existing reports in DNR files related to the source property.
- B. Document that the hazardous substance contamination, which is present in soil, groundwater, and/or sediment on the Property or Properties, is migrating onto the Property or Properties from an off-site source. Examples of information include:
 1. Information identifying known or suspected discharges of the hazardous substance on neighboring property(ies), e.g., a Phase I Environmental Assessment report, information in existing reports in DNR files related to the source property.
 2. Soil, groundwater and/or sediment sample data and interpretations adequate to conclude that the hazardous substance is migrating onto the Property or Properties, such as:
 - Samples from monitoring wells located on the upgradient side of the Property or Properties (include information to establish upgradient direction), which show increasing contaminant concentrations toward the upgradient Property or Properties;
 - Off-site investigation results that provide information about groundwater flow direction and contaminant movement that convincingly document hazardous substances from a known or suspected off-site source have impacted the Property or Properties; or
 - A description of the event(s) that caused the deposit or accumulation of contaminated sediment on the affected Property or Properties and a map showing the location of the water body and elevations of the affected Property or Properties and water surface at normal flow and flood stage conditions.
- C. Document that the discharge of a hazardous substance is not from a source on the Property or Properties. Examples of information include:
 1. Information related to historical activities, such as descriptions of chemicals used and handled, areas where chemicals were used and handled, and areas of potential discharges on the Property or Properties, e.g., a Phase I Environmental Assessment report.
 2. Where the types of hazardous substances used, handled, or discharged on the Property or Properties are the same as the hazardous substances migrating onto the Property or Properties, provide environmental information, e.g., expanded Phase II environmental assessment data, including type and volume of hazardous substances handled, generated or stored on the applicant's Property during the period of ownership and/or length of lease, and analytical results and interpretation for soil and groundwater samples collected from potential discharge areas to demonstrate that the contamination migrating onto the Property is separate and distinct from the contamination that may be on the Property.

Off-Site Liability Exemption and Liability Clarification Application

Form 4400-201 (R 05/19)

Page 5 of 6

8. Sign one of the certifications below based on whether the requirements of the off-site exemption are currently met.

8a. Certification if the applicant currently meets all the requirements for the off-site liability exemption.

Applicant Certification for a Determination for the Off-Site Discharge Exemption, as provided in s. 292.13, Wis. Stats.

I certify that I possess or control the Property and have read and am familiar with the information on this application. The information on and included with this application is true, accurate and complete to the best of my knowledge.

I understand that I retain the responsibility for any hazardous substance discharges that I caused or cause, and for any discharges whose source I possess or control on the Property or on other properties.

I believe that I meet the criteria in s. 292.13, Wis. Stats., with respect to the fact that I never controlled or possessed either the source property itself, or the hazardous substances that have migrated onto the Property from the source property, nor did I cause the hazardous substance discharge for which I am seeking this written exemption.

I understand that if I fail to satisfy the statutory requirements in s. 292.13, Wis. Stats., such as failing to provide access to the Property, the DNR has the authority to revoke the off-site exemption for the Property.

Applicant Last Name	First	MI
Smith	Dale (Skip)	
Signature	Date Signed	
	6-17-2022	

8b. Certification if applicant has not currently met all the conditions for the off-site exemption.

Applicant Certification for a Determination for Liability Clarification, as provided in s. 292.55, Wis. Stats.

I certify that I have read and am familiar with the information on this application and that the information on and included with this application is true, accurate and complete to the best of my knowledge.

I understand that I retain the responsibility for any hazardous substance discharges that I caused or cause, and for any discharges whose source I possess or control on the Property or Properties or on other properties.

It is my understanding that I have not met all the conditions for the off-site exemption at the time of this application, but I request a liability clarification determination that includes the conditions under which I or others would become eligible for the off-site discharge exemption for the Property or Properties, if I were to meet all the criteria under s. 292.13, Wis. Stats. I believe that I meet the criteria regarding the source of the contamination and the source property in s. 292.13, Wis. Stats., with respect to the fact that I never controlled or possessed either the source property itself, or the hazardous substances that have migrated onto the Property or Properties from the source property, nor did I cause the hazardous substance discharge for which I am seeking this written exemption.

I understand that if I meet the criteria in s. 292.13, Wis. Stats., and obtain the off-site liability exemption, but subsequently fail to satisfy the statutory requirements in s. 292.13, Wis. Stats., such as failing to provide access to the Property, the DNR has the authority to revoke the off-site exemption for the Property.

RE: Documentation and Off-Site Exemption Request for the Property Located
505 Grand Avenue in Little Chute, Wisconsin — DNR BRRTS No. 02-45-
589437, FEC Project No. 220406

Dear Ms. Borski:

Friess Environmental Consulting, Inc. (FEC) has prepared this letter and Off-Site Exemption request for the above referenced property (Site). This letter presents documentation requested by the DNR and requests an off-site exemption determination from the DNR.

Project Background

Environmental site assessments (ESAs) have been conducted on and around the Former Sandies Dry Cleaners & Laundry located at 513 Grand Avenue in Little Chute, Wisconsin (DNR BRRTS # 02-45-552222). A release of tetrachloroethylene (or “PCE”), which is a common chlorinated solvent utilized by dry cleaners, has been confirmed to have impacted soil and groundwater. PCE impacts were also noted in the soil and groundwater samples collected from the Site located at 505 Grand Avenue.

In a letter dated November 19, 2021, the DNR indicated that they are investigating whether current and/or past owners or occupants of the property at 505 Grand Avenue may potentially be responsible for causing or contributing to the contamination. Additional information on the building specifics and historical land uses was requested by the DNR including:

- Original building construction date, footprint and date(s)/location(s) of building additions and basement locations
- Past and current land uses
- Past and current use of chemicals at the property
- Ownership history; and
- Additional information that may aid to determine the source of shallow contamination discovered at P-8.

It is understood that the DNR had not received the requested information and subsequently issued a responsible party letter dated March 28, 2022.

FEC has been requested by Four D Investments, LLC (the property owner) to conduct the research, data review and evaluation, and DNR file reviews to demonstrate that the property at 505 Grand Avenue is not a source of contamination detected on the Site. It is our belief that the impacts at the Site are originating from the north adjoining Former Sandies Dry Cleaners & Laundry located at 513 Grand Avenue, which is an open ERP site.

In addition, this letter requests an off-site liability exemption indicating the liabilities associated with the off-site source of contamination detected at the Site.

Additional Information

Based on our research the additional information requested in the November 2021 DNR letter is outlined below.

- Original building construction date, footprint and date(s)/location(s) of building additions and basement locations.

The original construction date of the building located at 505 Grand Avenue could not be determined. City of Little Chute records list the construction date as “1900” but the earliest record on file (survey included) dates to approximately 1954. Additional information indicates a grocery store present at the Site dating back to the 1930’s. In addition, no information on dates of any additions was available and the current owner indicates all parts of the current structure were present dating back to 2004. Based on information obtained from the current owner and Village of Little Chute, the current building contains a basement in the eastern portion of the building with the structures on the western portion of the Site built as slab-on-grade (sketch and property records info included).

- Past and current land uses

The Site has historically been commercial in nature with the earliest records indicating use of the property as Hanegraaf's Grocery dating back to the 1930’s. Based on information reviewed, the Site was subsequently utilized as the Little Chute Beer Depot (date unknown), Jane’s Upholstery and Antiques (1990 to 2000), a youth center (date unknown), and the Bakers Outlet (2004 to present).

- Past and current use of chemicals at the property

It does not appear that any of the historical uses of the property would indicate use of chemicals at the Site outside of commercial sized containers of cleaners for use in operations.

- Ownership history; and

Based on information reviewed, the property was owned by C.J. Hanegraaf (grocery 1954), Jerry Hietpas (antique shop 1990 to 2004), and Four D Investments (bakery 2004 to present).

- Additional information that may aid to determine the source of shallow contamination discovered at P-8.

Soil Information

The November 2021 DNR letter indicates that soil and groundwater data collected in July 2021 from the Site (P-8) may not be associated with a discharge from the adjacent dry cleaning operation. Soil “data with a high shallow concentration that decreases with depth is indicative of a localized, surficial spill as opposed to sub-surface migration of contamination from the adjacent dry cleaner operation.”

Based on a review of the DNR case file for the Former Sandies Dry Cleaners & Laundry (DNR BRRTS # 02-45-552222), a release from the dry cleaners was documented as surficial onto the ground surface west of the dry cleaning facility and into the alley right-of-way west of the dry cleaners. This is documented in a 2011 interview with a DNR warden from a neighbor (included). Further testing indicated high levels of contaminants in this discharge area at three (3) feet below ground surface (bgs) that were subsequently excavated for disposal during the EPA/DNR joint clean up effort in 2011/2012 (email and diagram included). The material present along the south sidewall of the excavation appeared to be sand extending beneath the basement entrance to the dry cleaners (photo included). This basement entrance structure abuts the north wall of the garage on the Site. Although as-builts for the garage were not available, it is likely that a granular (gravel) subgrade was utilized during its construction. As such, there appears to be a highly permeable shallow migration pathway present in the shallow ground surface in the area of the known surficial release on the dry cleaners site. The presence of this shallow permeable migration pathway is further detailed in the boring logs from the soil borings advanced west of the dry cleaners and within the alley right-of-way including HA-2, GP-2, GP-4, GP-6, MW-3, and P-8 (included). All of the boring logs indicate a sand or gravel material to be present from the ground surface to approximately 2.5 feet bgs overlaying silty clay.

This would indicate shallow permeable soils overlaying an impermeable silty clay barrier layer present from the area of surficial release on the dry cleaners extending onto the south adjoining Site would create a shallow migration pathway. As such, we believe that the shallow soil impacts present at P-8 are not associated with a localized surficial spill on the Site, but migration of the surficial release from the dry cleaners through the shallow permeable materials present west of the dry cleaners and within the alley right-of-way.

Groundwater Information

The November 2021 DNR letter indicates that “while groundwater contamination is expected in the area, the presence of contamination in shallow groundwater with a basement between the known discharge area (the dry cleaner) and the shallow groundwater contamination at P-8 is also concerning.”

There is not a basement present between the dry cleaners and the location of boring P-8. All of the structures on the western portion of the Site are of slab-on-grade construction. The release (or a portion of the release) to the west of the dry cleaners appears to have been surficial in nature and would therefore be above any such basement. In addition, the presence of shallow soil impacts at P-8 (as detailed above) would indicate a shallow source and would logically produce a shallow groundwater component of any groundwater plume.

The lack of any basements between the source (dry cleaner) and boring P-8 on the Site as well as the presence of a shallow migration pathway with elevated shallow soil impacts would explain the presence of shallow groundwater impacts at P-8. As such, we believe that the groundwater impacts are not associated with a localized surficial spill on the Site, but migration of the surficial release from the dry cleaners through the shallow permeable materials present west of the dry cleaners and within the alley right-of-way.

Conclusions

The results of our environmental review indicate that none of the historical uses of the Site (grocery, antique store, bakery, etc.) and no documented use of solvents at the Site would make a spill of PCE on the Site unlikely. The documented surficial release west of the dry cleaners and presence of shallow permeable soils overlaying an impermeable silty clay barrier layer present from the area of surficial release on the dry cleaners extending onto the south adjoining Site would create a shallow migration pathway directly onto the Site. As such, impacts at the Site are originating from the north adjoining Former Sandies Dry Cleaners & Laundry open ERP site located at 513 Grand Avenue.

Based on the information presented, we request that the RP letter be rescinded for the Site and that the DNR provide an off-site discharge exemption for the Site. The DNR form 4400-201 and associated \$700 review fee are also attached.

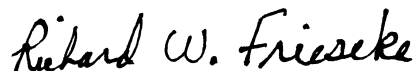

We appreciate your assistance with this request. If you have any questions or comments regarding this submittal, please contact us at (414) 228-9815.

Respectfully,

Friess Environmental Consulting, Inc.

RE: CITY DIRECTORY RESEARCH
505 Grand Avenue
Little Chute, WI 54140

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

BEG-700 of Grand Ave

Case Number 11-C265-002.CMY	Case Title SANDIE'S DRYCLEANER
Activity INTERVIEW OF STEVE A. ZACK	Date of Activity FEBRUARY 15, 2011

Narrative¹

On Tuesday February 15, 2011 at approximately 1:00 pm, DNR Conservation Warden Michael A. Young (P.O. Box 217, Shiocton, WI 54170 {920-986-3614}) was contacted by DNR Hydrogeologist Jennifer Borski (625 East County Road Y Suite 700, Oshkosh, WI 54901 {920-424-7887}). Borski works with the DNR's Division of Air and Waste Remediation and Redevelopment program. Borski requested assistance with interviewing several subjects who may have witnessed the owner of a Dry Cleaners dispose of chemicals illegally. The drycleaners known as Sandie's Drycleaner is located on Grand Avenue in Little Chute, WI. Young met with Borski at Weenies Still a tavern located at 515 Grand Avenue Little Chute, WI.

The tavern is located North of Sandie's and the building butts up to Sandie's. Young was told a bartender named Zack had witnessed other violations at the drycleaners. Young was given the phone number of 920-205-5051 from Lisa Peeters to contact Zack who was at home. Young phone Zack and identified himself as a Conservation Warden and stated he was investigating the possible illegal discharge of chemicals by the drycleaners. Young asked if he could interview Zack about the issue. Zack stated he would speak with Young and gave Young the address of 201 ½ 9th Street, Kaukauna, WI 54130 to meet Zack. Young arrived at the 2nd story apartment and was invited in by Zack. Young spoke with Zack about the issue and asked if Zack would be willing to give Young a written statement. Zack agreed to the statement. While filing out the form Young found that Zack's real name was Steve A. Zack (DOB 10-28-49, 201 ½ 9th Street, Kaukauna, WI 54130 {920-205-5051}). Zack gave Young the following statement.

I, Steve A. Zack am 61 years of age and have completed the 16 grade. I am providing the following voluntary statement to Michael Young who has identified himself as a Conservation Warden and is writing it down for me under my guidance and permission. I make this statement without any inducement or coercion whatsoever. No threats or promises, no offers of reward have been used to persuade me to make this statement.

1

Warden Reporting Michael A. Young	Date of Report March 08, 2011	Exhibit Reference
---	---	-------------------

This document was produced as a result of an official Law Enforcement investigation. Contents, in whole or part, are privileged by s. 905.09, Wis. Stats., and may not be used without express permission of the Wisconsin Warden service or appropriate prosecutor.

I have worked at 515 Grand Ave, Little Chute at Weenies Still as a bartender and handyman since 1999. The bar is located north and adjacent to Sandie's Drycleaner. The owner of the drycleaners was not known personally to me. After the drycleaner was closed down I saw both back doors open and a hose about 2" in diameter about a foot or so past the outside of the building. There was a liquid, clear in color, pumping out at a fast rate. There was a sour odor to the liquid. There was a puddle formed and you could tell it was seeping into the ground. This was during the summer months after the drycleaners had closed and around 1 pm. I did not talk to anyone about that but left to go home. I had not seen anything else dumped out. I found it odd that the liquid was being pumped into the lot. There was always an odor by the pipe in the corner of the building. The smell always was like a chemical smell. I think there is an underground tank there.

Young read the above statement to Zack who stated the statement was true and did not want to make any changes. Young had Zack re-read the statement and sign the bottom which Zack did at 4:23 pm.

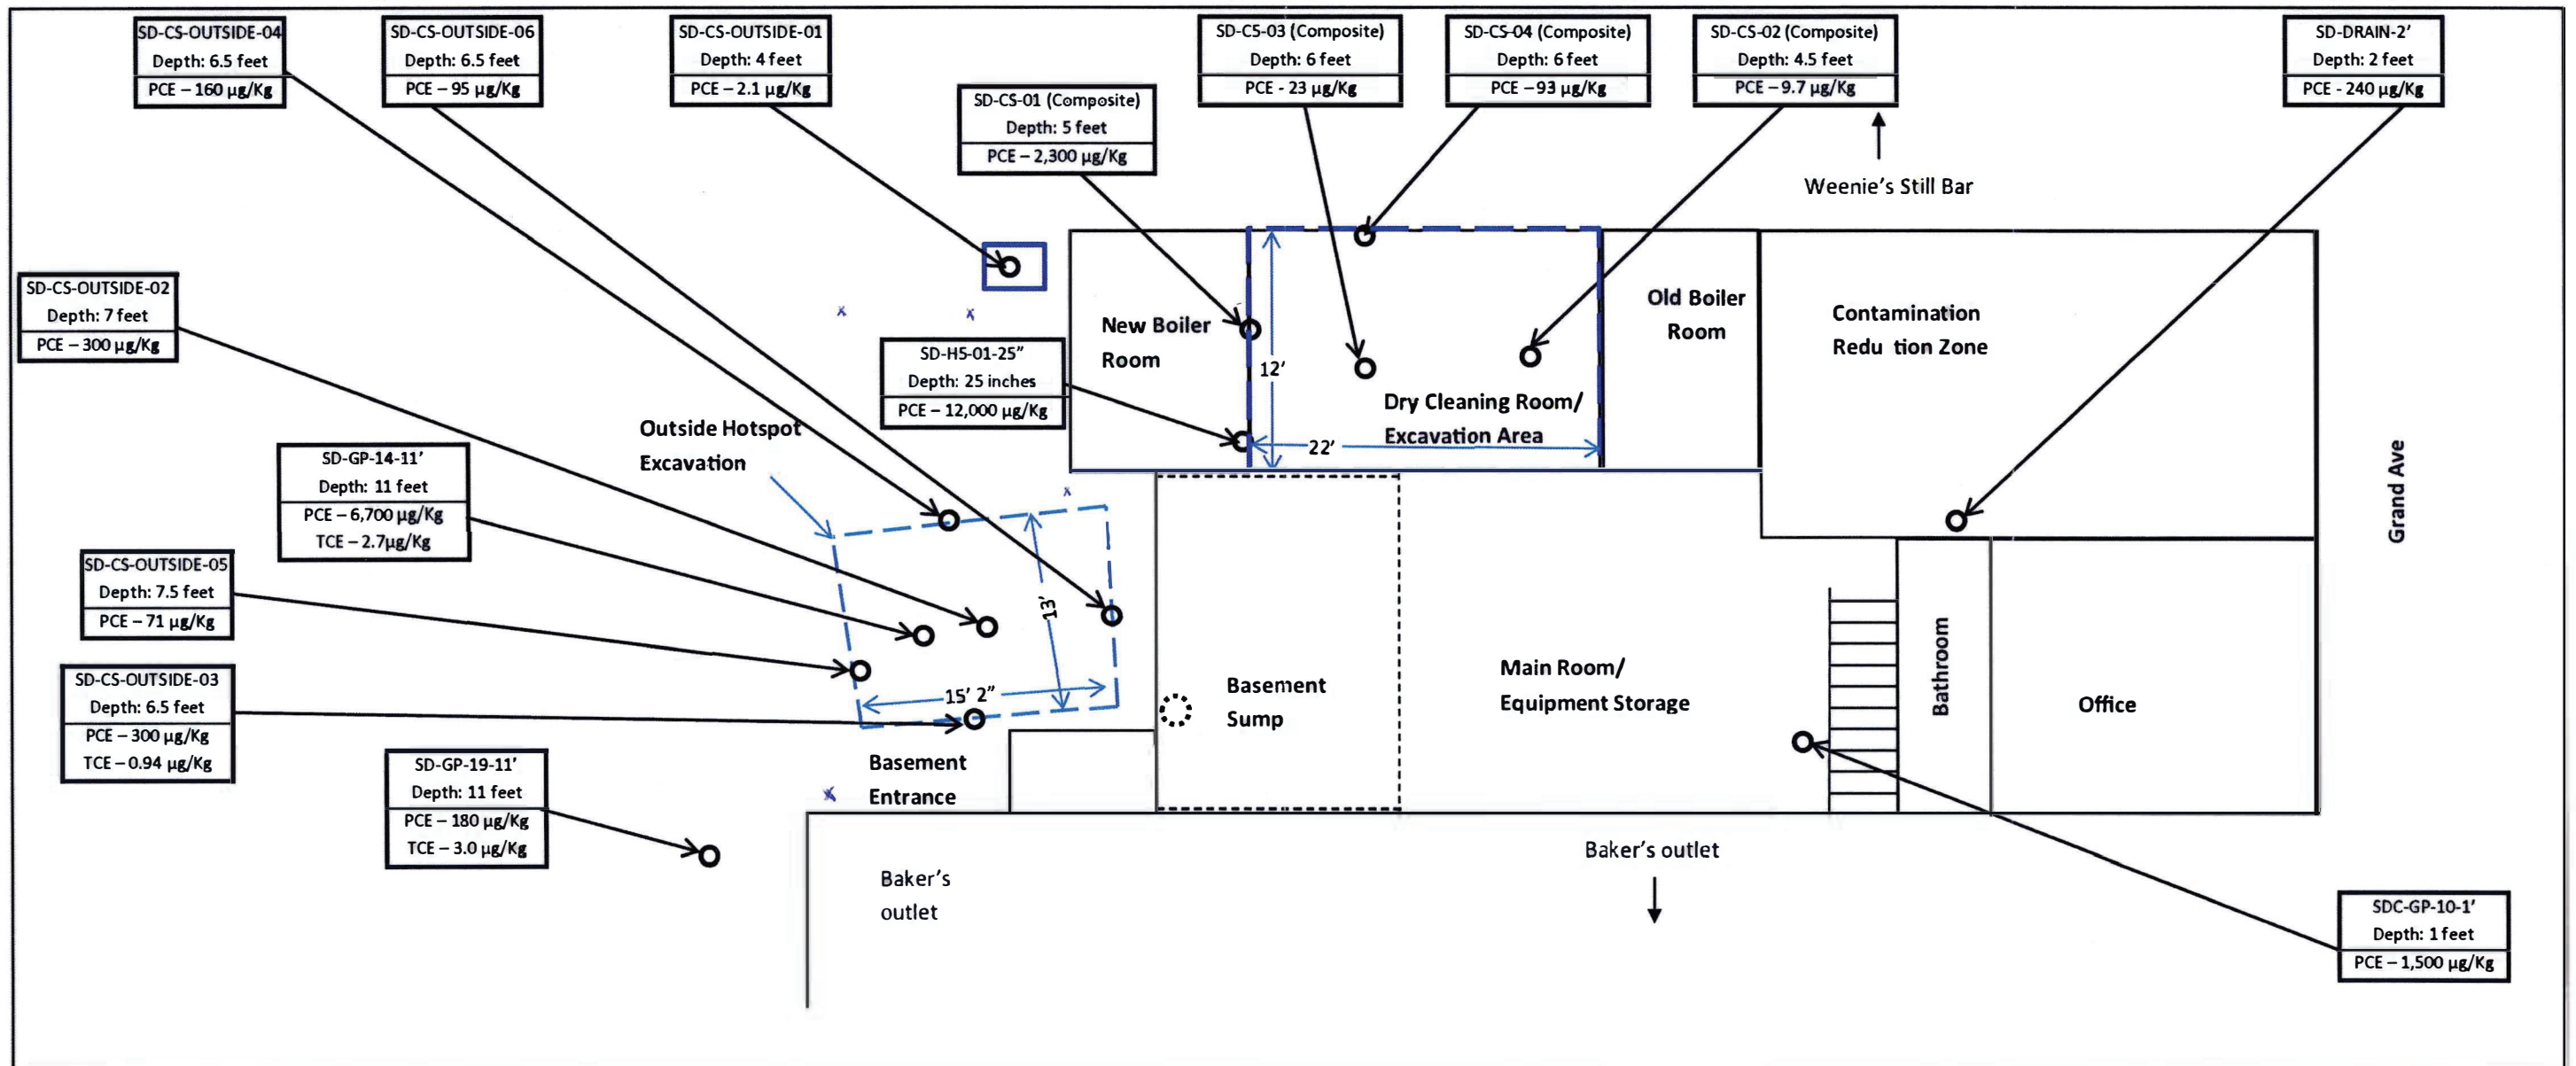

Borski, Jennifer - DNR

Cc: Halbur.Kathy@epamail.epa.gov
Subject: Major Hotspot Located at Sandies Outside Rear of the Building

FYI, We completed some more geoprobe activities this morning and found a hotspot area in the back of the building in the area that the neighbors stated that Owner dumped. Highest reading is about 3000ppm (offscale Multirae) at 3feet BGS. Contamination goes down to 6ft bgs then a clay layer (11ppm at 8 ft) then 13 ft bgs at 47ppm.

We will dig out to the limit of the excavator (7 ft) in the hotspot tomorrow.

Ramon C. Mendoza,
