---

Hello All,

Hopefully this is the last update regarding the spill response. There were no issues with the pipeline start up or additional issues over the weekend per Ross Peterson. I will plan on closing the spill files and opening an ERP case. I'm hoping to get the RP letter out this afternoon.

Thank you

**Subject:** 8.12.2022 - Enbridge Update

Hello again,

On 8/11/2022, Bad River Tribal representatives requested that the EPA inspect the discharge and meeting was held onsite at 11:30 on 8/12/2022.

- Enbridge personnel, including Ross Peterson, Dave Morrison from the EPA, and Phil Richard from DNR entered the site to observe the pipeline excavation and discussed previous actions that had been completed to address the two previously reported discharges. Naomi Tillison from the Bad River Tribe was not available, but the tribe's Public Safety Officer and Compliance Officer were also onsite. I was not able to attend the meeting.
- The welds on the pipeline had been repaired (attached photos). Enbridge opened the pipeline at approximately 11:30 and it was in full operation when the meeting concluded at approximately 12:30. The pipeline will be in operation for 12 hours and then a series of checks will be completed to make sure there are no leaks per Pipeline Hazardous Materials Safety Administration requirements. In case of a leak, Enbridge currently has a sump pump in the excavation and would pump crude into an onsite frac tank.
- Maintenance work will continue over the weekend and they expect that the excavations adjacent to the pipeline will be backfilled early next week.
- All parties met after and discussed previous actions and actions that will be taken when the site is transferred to the Environmental Repair Program. Dave Morrison confirmed that DNR would be the lead agency for additional response actions and requested that he be sent copies of any reports or data generated. Bad River also requested copies of any reports or data.

I also called Dave Morrison after the site visit was complete:

- He stated he saw no indication of a significant release during the site visit.
- We discussed the ERP and requirements under NR700
- Dave requested that he be sent reports generated during the ERP investigation.

I will call Ross Peterson Monday morning for an update. If there are no concerns, I will transfer the site to the ERP Program and send them a RP letter Monday afternoon.

Thank you

**Subject:** Enbridge Update

Hello all,

I just talked to Ross Peterson and got a brief update. Crews will be working today to repair the weld, hoping to complete it today but don't have a definite timeline. The pipeline will be shut down until the weld is repaired. No indication of additional discharge from the weld or weep.

The original spill is still open and a new spill was created in SERTs for the weep. I will close the original spill and this spill when they have the weep resolved and transfer the site to the ERP. I will send them a RP letter to kick off the ERP investigation, hopefully on Monday if they have the weep resolved.

Thank you

**We are committed to service excellence.**

**Subject:** FW: Enbridge Update 8/10

Hello again,

Warden Supervisor Rick Peters arrived on the site at 22:00. Crews were still onsite sandblasting the pipe. Crew members told Warden Peters that section of pipeline was laid in 1953 and the weld was a 1976 weld. He took a photo of the top of the pipe (attached, photo 1), the area ring in the joint in question

They described a weep at the bottom of the pipe at the joint (attached photo 2) that is in the same excavation where impacted soil was identified last week. The weep consisted on an oily substance that did not drip, but could felt if one held their fingers in that area. The weep is the reason why they notified the NRC. As of earlier today, they did not think that the weep was the source of previously identified soil contamination. They are in the process of addressing the weep and it is my understanding that the pipeline is still shutdown.

Warden Peters did not observe petroleum odors, stained soil or any water in the excavation.

Thank you

**We are committed to service excellence.**

Hi Jeff,

In regards to your question about the NRC report today, crews discovered a small area of staining on the pipe on a weld. As I mentioned, no material was released to soil or water as a result of their work. PHMSA has been notified through the NRC because of the repair per their requirements.

Our statement: As Enbridge crews were preparing Line 5 for planned maintenance activities off Holmes Road in the Town of Gingles, they discovered a small area of staining on the pipe on a weld. Line 5 has been shut down as crews make repairs. PHMSA has been notified because of the repair work. We will provide more information as it becomes available.

For any further media related questions, I will refer to you Juli Kellner of Enbridge – [juli.kellner@enbridge.com](mailto:juli.kellner@enbridge.com) 218-461-7837

Thanks,

-Ross

## Media Contact Summary Report

Issue / Topic *	Enbridge Line 5 Spill Notification(s)
Media Outlet *	WPR
Reporter's Name	Danielle Kaeding
DNR Staff who received the media contact *	Trevor Nobile from Sarah Hoyer
Your Bureau/Division *	RR Program/EM Division
<b>Summary *</b> <p>T. Nobile followed up an email inquiry from Danielle Kaeding (WPR) received from Sarah Hoyer on 8/11/2022. T. Nobile spoke to Danielle at 1:33 PM and 2:53 PM on 8/11/2022. Answered general questions regarding the current status of the response actions taken as part of the Spill Notification that was received on 8/3/2022. Also, provided general information on the current facts/details of the Spill Notification received on 8/11/2022. Described general DNR regulatory authority when it comes to Spill Notification and subsequent investigation and cleanup. Detailed that this is an iterative process that can develop and change over time based on the information provided and/or observed to date. Indicated that the DNR has been working closely with the RP and will have continued communication and support to address the matter(s).</p>

**Subject:** 8.12.2022 - Enbridge Update

Hello again,

On 8/11/2022, Bad River Tribal representatives requested that the EPA inspect the discharge and meeting was held onsite at 11:30 on 8/12/2022.

- Enbridge personnel, including Ross Peterson, Dave Morrison from the EPA, and Phil Richard from DNR entered the site to observe the pipeline excavation and discussed previous actions that had been completed to address the two previously reported discharges. Naomi Tillison from the Bad River Tribe was not available, but the tribe's Public Safety Officer and Compliance Officer were also onsite. I was not able to attend the meeting.
- The welds on the pipeline had been repaired (attached photos). Enbridge opened the pipeline at approximately 11:30 and it was in full operation when the meeting concluded at approximately 12:30. The pipeline will be in operation for 12 hours and then a series of checks will be completed to make sure there are no leaks per Pipeline Hazardous Materials Safety Administration requirements. In case of a leak, Enbridge currently has a sump pump in the excavation and would pump crude into an onsite frac tank.
- Maintenance work will continue over the weekend and they expect that the excavations adjacent to the pipeline will be backfilled early next week.
- All parties met after and discussed previous actions and actions that will be taken when the

site is transferred to the Environmental Repair Program. Dave Morrison confirmed that DNR would be the lead agency for additional response actions and requested that he be sent copies of any reports or data generated. Bad River also requested copies of any reports or data.

I also called Dave Morrison after the site visit was complete:

- He stated he saw no indication of a significant release during the site visit.
- We discussed the ERP and requirements under NR700
- Dave requested that he be sent reports generated during the ERP investigation.

I will call Ross Peterson Monday morning for an update. If there are no concerns, I will transfer the site to the ERP Program and send them a RP letter Monday afternoon.

Thank you

**Subject:** Enbridge Update

Hello all,

I just talked to Ross Peterson and got a brief update. Crews will be working today to repair the weld, hoping to complete it today but don't have a definite timeline. The pipeline will be shut down until the weld is repaired. No indication of additional discharge from the weld or weep.

The original spill is still open and a new spill was created in SERTs for the weep. I will close the original spill and this spill when they have the weep resolved and transfer the site to the ERP. I will send them a RP letter to kick off the ERP investigation, hopefully on Monday if they have the weep resolved.

Thank you

**Subject:** FW: Enbridge Update 8/10

Hello again,

Warden Supervisor Rick Peters arrived on the site at 22:00. Crews were still onsite sandblasting the pipe. Crew members told Warden Peters that section of pipeline was laid in 1953 and the weld was a 1976 weld. He took a photo of the top of the pipe (attached, photo 1), the area ring in the joint in question

They described a weep at the bottom of the pipe at the joint (attached photo 2) that is in the same excavation where impacted soil was identified last week. The weep consisted on an oily substance that did not drip, but could felt if one held their fingers in that area. The weep is the reason why they notified the NRC. As of earlier today, they did not think that the weep was the source of previously identified soil contamination. They are in the process of addressing the weep and it is my understanding that the pipeline is still shutdown.

Warden Peters did not observe petroleum odors, stained soil or any water in the excavation.

Thank you

**We are committed to service excellence.**

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.

Hi Jeff,

In regards to your question about the NRC report today, crews discovered a small area of staining on the pipe on a weld. As I mentioned, no material was released to soil or water as a result of their work. PHMSA has been notified through the NRC because of the repair per their requirements.

Our statement: As Enbridge crews were preparing Line 5 for planned maintenance activities off Holmes Road in the Town of Gingles, they discovered a small area of staining on the pipe on a weld. Line 5 has been shut down as crews make repairs. PHMSA has been notified because of the repair work. We will provide more information as it becomes available.

For any further media related questions, I will refer to you Juli Kellner of Enbridge – [juli.kellner@enbridge.com](mailto:juli.kellner@enbridge.com) 218-461-7837

Thanks,

-Ross

**Subject:** Enbridge Sit visit

Hi Phil,

Dave Morrison from the EPA plans to be onsite at 11:30 today. His number is 651-706-4116. The Bad River Tribe Environmental people will also be onsite, as will Ross Peterson (218-341-3863), who I have been working with and who is the environmental contact for Enbridge.

Dave asked if we had a PID, his apparently is not working correctly. I don't know if you have one in Park Falls, I told him that I would ask you if you did. Not a big deal if you don't. You'll need a hard hat, steel toes, safety glasses and safety vest. Ross will bring FR coveralls for you. It sounds like the pipeline will at least be partially back in operation.

I'll be available if they have any questions. The current plan is to transfer the spill site to a ERP site unless there are signs of an active spill. I intend to send a RP letter on Monday, Enbridge is fully aware of this and have been cooperative.

The site is located on Holmes Road approximately .4 miles south of the intersection of Holmes and Old Airport Road. It's a fenced in transfer station on the west side of Holmes. GPS coordinates are:

46.554275, -90.823544

Trevor Nobile has been in contact with Bad River and said that they have been very cordial. I've briefed the EPA on site specifics and Enbridge has also been very cooperative, so I'm not expecting this to be a contentious meeting. I'll be available to answer any questions.

Thank you very much for going up there!

**Subject:** Enbridge Update

Hello all,

I just talked to Ross Peterson and got a brief update. Crews will be working today to repair the weld, hoping to complete it today but don't have a definite timeline. The pipeline will be shut down until the weld is repaired. No indication of additional discharge from the weld or weep.

The original spill is still open and a new spill was created in SERTs for the weep. I will close the original spill and this spill when they have the weep resolved and transfer the site to the ERP. I will send them a RP letter to kick off the ERP investigation, hopefully on Monday if they have the weep resolved.

Thank you

**Subject:** FW: Enbridge Update 8/10

Hello again,

Warden Supervisor Rick Peters arrived on the site at 22:00. Crews were still onsite sandblasting the pipe. Crew members told Warden Peters that section of pipeline was laid in 1953 and the weld was a 1976 weld. He took a photo of the top of the pipe (attached, photo 1), the area ring in the joint in question

They described a weep at the bottom of the pipe at the joint (attached photo 2) that is in the same excavation where impacted soil was identified last week. The weep consisted on an oily substance that did not drip, but could felt if one held their fingers in that area. The weep is the reason why they notified the NRC. As of earlier today, they did not think that the weep was the source of previously identified soil contamination. They are in the process of addressing the weep and it is my understanding that the pipeline is still shutdown.

Warden Peters did not observe petroleum odors, stained soil or any water in the excavation.

Thank you

**We are committed to service excellence.**

Hi Jeff,

In regards to your question about the NRC report today, crews discovered a small area of staining on the pipe on a weld. As I mentioned, no material was released to soil or water as a result of their work. PHMSA has been notified through the NRC because of the repair per their requirements.

Our statement: As Enbridge crews were preparing Line 5 for planned maintenance activities off Holmes Road in the Town of Gingles, they discovered a small area of staining on the pipe on a weld. Line 5 has been shut down as crews make repairs. PHMSA has been notified because of the repair work. We will provide more information as it becomes available.

For any further media related questions, I will refer to you Juli Kellner of Enbridge – [juli.kellner@enbridge.com](mailto:juli.kellner@enbridge.com) 218-461-7837

Thanks,

-Ross

Hi Sarah,

Attached is the e-mail that I sent to Trevor Nobile regarding this discharge. For whatever reason, the NRC report isn't very reflective of the situation that was observed.

Thank you and please let me know if you have any questions.
