Hi Lisa,

Do you have a Phase 2.5 or other documentation to go along with this special provisions review? I only received the special provisions for this project but you included a Phase 2.5 in addition to the special provisions for the 6517-15-30 project. I'm not familiar with the project so some additional information (Phase 2/2.5, Phase 1, plan figures, associated BRRTS case(s), etc.) would be appreciated for 6230-20-00.

Thanks,
-Colin

Hi Mae-
Attached are the special provisions for Project 6230-20-00 in Seymour that was revised based on your comments. Take a look and let me know if you have any questions or additional revisions. I've also attached the special provisions for Project 6517-15-30 in Shiocton that has your revisions integrated into the document as applicable; however, let me know if I need to send those special provisions to a different group in a separate project specific email.

Thanks,

Subject: RE: Phase 2.5 Work Plan 6230-20-00, WIS 54, Outagamie County

Hi Paul,

Attached are comments for STPS. After these changes are made and we are happy with the adjustments we will send to DNR for concurrence.

For the stockpiling comment, below is example language from a previous project.

> When material is encountered outside the above-identified limits of known contamination that appears to have been impacted with petroleum or chemical products, or when other obvious potentially contaminated materials are encountered or material exhibits characteristics of industrial-type wastes, such as fly ash, foundry sand, and cinders, or when underground storage tanks are encountered, suspend excavation in that area and notify the engineer.
>
> Some material may require additional characterization prior to disposal. Provide for the temporary stockpiling of up to XX cubic yards of contaminated soil on-site that require additional characterization. Construct and maintain a temporary stockpile of the material according to NR 718.05(3), including, but not limited to, placement of the contaminated soil/fill material on an impervious surface and covering the stockpile with impervious material to prevent infiltration of precipitation. The environmental consultant will collect representative samples of the stockpiled material, laboratory-analyze the samples, and advise the contractor, within XX business days of the construction of the stockpile, of disposal requirements. The stockpiled material shall be disposed either at the WDNR-licensed disposal facility by the contractor or, if characterized as hazardous waste, by the department. As an alternative to temporarily stockpiling contaminated soil/fill material that requires additional characterization, the contractor has the option to suspend excavation in those areas, as stated above.

As far as the contaminated water, we didn't see any language addressing that in the STPS, there is a comment about it now in there. I wanted to ask if any coordination has been done with the municipality to see if we could dewater into their waste water treatment facility?

Good morning Kathie,

Both designs are fairly set, what design tweaks would require changes to the Special Provisions? I was trying to think of possible changes that may effect this and could not think of any. Added work or things like that I do not see happening at this point.

Sincerely,
Jesse

Subject: RE: Phase 2.5 Work Plan 6517-15-30, WIS 76, Outagamie County - Shiocton, WI

Hi, Jesse.

I reached out to Bay West. Typically preparation of the special provisions is included in the phase 2.5 effort, but Bay West is new to our hazmat contract. I assumed they did not include it in their scope of work and that I had overlooked this when I reviewed. Paul (Bay West) clarified that they did intend to provide the special provisions; however, they assumed these would be provided later in the design process and then appended to the Ph 2.5 report.

So, good news is, the existing work order will cover this effort. If we're comfortable with the design, I'll ask Bay West to move forward with drafting the special provisions. If we think there will still be tweaks, we can hold until later. Pertains to both projects.

Let me know how you'd like to proceed. Thanks, and sorry for any confusion I caused.

Kathie

Thank you Kathie and that does sounds good to me.

There are 2 different consultant design teams, I have not heard back from the 54 project team yet but I know it is not in their contract either as I looked at both of them this morning. I was going to wait and see with what they responded with.

Yes, I will reach out to Bay West to see if they have enough budget in their existing work order. If not, I'll ask them to put together a change order and/or scope a small new work order.

Does this sound OK for you? And does this pertain to both projects or just the one listed here?
Thanks,
Kathie

Good morning Jesse,

Thank you for passing along the Phase 2.5 report for STH 76 - ID 6517-15-30. I noticed the text about the project team potentially preparing the special provisions. We would ask that the consultant that completed the investigation/Phase 2.5 report prepare the applicable special provision as they are the ones who did the investigation. (The special provision(s) is a typical requirement of a Phase 2.5 Report per the FDM.)

Also, We Energies had requested the report once it was completed. Is it okay for us to forward the report to them?

Thank you,

Eric

Hi, Jesse.

I'm forwarding the Phase 2.5 reports for projects 6517-15-30 and 6230-20-00 (will come shortly in a separate e-mail).

Next steps –
Review/comment on reports (I have not yet reviewed. I will try to do so in the next couple weeks. However, I rarely have substantive comments on these reports)
Develop special provisions (will likely require coordination with local waste water treatment operator for contaminated groundwater management)
Send Phase 2.5 report and special provisions to DNR for review and concurrence on special provisions

If the project team is uncomfortable with preparation of the special provision, we can ask Bay West to assist.

If you have any questions, please let me know.

Thanks,

Kathie

List of Tables

List of Figures

List of Appendices

1.0 BACKGROUND

The Wisconsin Department of Transportation (DOT) is completing roadway improvements which include Americans with Disabilities Act (ADA) curb ramp updates, storm water drainage improvements, and installation of two roundabouts at the intersections of STH54/STH55 and STH 54/CTH C in Outagamie County, Wisconsin.

In November 2019, Wisconsin Department of Transportation completed a Phase I Hazardous Materials Assessment (HMA) of the Project Corridor (WisDOT, 2019; **Appendix A**). Two sites were identified within the Phase I HMA as having environmental impacts that could be encountered during construction..

The DOT requested Bay West LLC (Bay West) to complete this Phase 2.5 site investigation to assess the two areas of environmental concern.

1.1 Site Location

Listed below are the locations on the Bureau of Remediation and Redevelopment Tracking System (BRRTS) which were identified in the Phase I HMA (**Appendix A**) as posing an environmental concern (**Figure 1**). Investigation areas are depicted in **Figure 2**.

- **Closed Shell Station, 1043 Ivory St in Seymour BRRTS (#03-45-001819)**: The area of concern is located along the northern sidewalk/curb-line of STH 54 from approximate station (STA) 717+00 to approximate STA 719+00 (**Figures 3** and **4**). This site is a former gas station. This site is a closed leaky underground storage tank (LUST) site and has had four tanks removed and replaced in the year 2000. Contaminated soil was found and left onsite during tank removal**.**
- **Active Mobil Station (Former Gas Station), 140 STH 54 in Seymour, BRRTS (#03-45-153996)**: The area of concern is located along the southern sidewalk/curb-line of STH 54 from approximate STA 717+00 to approximate STA 718+00 (**Figures 3** and **5**). The site is an active gasoline (leaded fuel) and diesel filling station. This site is a closed LUST site with multiple USTs. In 2000, four tanks were pulled and replaced with two 6,000-gallon unleaded gasoline, one 12,000-gallon unleaded gasoline and one 6,000-gallon diesel fuel underground storage tanks that are currently in place.

This Phase 2.5 investigation report was completed to investigate potential soil and groundwater contamination within DOT ROW, assist in parcel acquisitions, and to determine the feasibility of doing a limited clean up in the proposed or existing right of way.

1.2 Continuing Obligations

- The Closed Shell Station Site (BRRT #03-45-001819) has continuing obligations that apply to this property, as follows: “Prior to constructing or reconstructing a water supply well, you need to contact DNR for approval of well construction specification.”

- The Active Mobil Station Site (BRRT #03-45-153996) has continuing obligations that apply to this property, as follows: “Prior to constructing or reconstructing a water supply well, you need to contact DNR for approval of well construction specification.”

1.3 Nature of Contamination

Closed Shell Station: Contamination pertaining to this site is related to leaking underground storage tanks containing gasoline. The site has been closed since 1996 and more recently in 2012, however residual contamination may be encountered to the south and east of the property near the ROW. Further discussion of findings from this Phase 2.5 Investigation is presented in

Section 3.1 and **Section 4.1**. Boring locations and analytical results are exhibited in **Figure 3**. Cross sections of this site are illustrated on **Figure 5A**.

Active Mobil Station: Contamination pertaining to this site is related to leaking USTs containing gasoline (unleaded) and other petroleum products. Background documents included with this site explain the extent of contamination as a northeastern trending plume located at the groundwater table (4-5 feet below ground surface - bgs). The extent of contamination was noted to also extend into the DOT ROW. Further discussion of findings from this Phase 2.5 Investigation report are discussed in **Section 3.2** and **Section 4.2**. Boring locations and analytical results are exhibited on **Figure 4**. Cross sections of this site are presented in **Figure 5B**. Results are exhibited on **Figure 4**.

2.0 SAMPLING ACTIVITIES

The Phase 2.5 Work Plan dated July 6, 2021, was developed with DOT and provided the detailed scope and rationale for the soil boring locations and analytical samples collected during the investigation (**Appendix D**). Bay West completed the Phase 2.5 investigation field activities on September 29 and 30, 2021.

2.1 Soil Borings

On September 29 and 30, 2021, 14 borings were advanced by Probe Technologies, Inc. with a truck mounted push-probe drilling rig to a depth of 6 to 10.5 feet below ground surface (bgs). Seven borings were advanced along the northern curb line of STH 54 in front of the Closed Shell Station site (SB-01 through SB-07) and seven borings were advanced along the southern curb line of STH 54 in front of the active Mobil Station site (SB-07 through SB-14). Soil boring locations in relation to the Project Corridor are shown in **Figure 3, 4,** and **5.** A total of 19 soil samples were submitted to Pace Laboratory (Pace) in Green Bay, Wisconsin for laboratory analysis, and results are tabulated in **Tables 2a and b**. Lab reports are included in **Appendix C**.

2.1.1 Soil sampling methods

Soil samples were collected using a stainless-steel core sampler equipped with a disposable acetate liner advanced to the desired depth using a hydraulic push-probe drilling rig. The core sampler produced discrete samples approximately 2 inches in diameter and 4 feet long. Soil samples were collected continuously at 4-foot intervals to the termination depth of each boring.

The acetate liner of each sample was cut open and the respective soil samples were placed into the appropriate containers for field screening and laboratory analysis. Samples were collected at a rate of every 2 feet to be field screened for volatile organic compounds (VOCs) using a photoionization detector (PID) equipped with a 10.6-electron volt bulb. PID results ranged from <0.1 parts per million (ppm) to 15,000 ppm. Soil headspace results are tabulated in **Table 1**. Following field screening sample collection, the soil borings were characterized and observed for visible/olfactory signs of contamination (e.g. debris, staining, odors, and sheen). Boring logs were prepared for each soil boring and are included in **Appendix B**.

A total of 19 soil samples were collected and submitted to Pace Analytical (Pace) for laboratory analysis using the following methods:

- Diesel Range Organics (DRO; Wisconsin Method DRO);
- Gasoline Range Organics (GRO; Wisconsin Modified GRO);
- Volatile Organic Compounds [VOCs; Environmental Protection Agency (EPA) 8260];
- Toxicity Characteristic Leaching Procedure (TCLP) 8 Metals (EPA 6010 / EPA 7471)

Samples collected were labeled corresponding to the soil boring number from which they were collected (e.g., SB-01). Additionally, soil samples were labeled with the corresponding depth interval from which they were collected (in feet bgs). For example, a sample collected from the 8- to 10-foot depth in SB-01 was labeled “SB-01 (8-10).”

2.2 Groundwater Sampling

Groundwater samples were collected from five soil borings. Three temporary wells (samples TW-01, TW-02, and TW-03) were installed to a depth of between 6 and 10 feet bgs at the closed Shell Station site to investigate potential groundwater contamination near the former UST basin. Two temporary wells (TW-04 and TW-05) were placed at the active Mobil Station site at soil boring locations SB-11 and SB-14. Groundwater level measurements were collected using a water level

meter from each temporary well. The groundwater levels from the Shell Station Site ranged from 4.46–7.82 feet bgs. Groundwater levels from the Mobil Station Site ranged from 4.81–4.97 feet bgs. Groundwater sampling locations are shown on **Figure 3** and **Figure 4.** Fivegroundwater samples were submitted to Pace for laboratory analysis, and results are tabulated in **Table 3** and **Table 4**. Lab reports are included in **Appendix C**.

2.2.1 Groundwater Sampling Methods

Groundwater samples were collected through a polyvinyl chloride (PVC) screen (5 feet in length) with polyethylene tubing using a peristaltic pump and reverse flow method. A new pair of disposable nitrile gloves were used for each sample. Groundwater samples were placed in the appropriate laboratory-provided containers. A new, clean field filter was utilized during the collection of each groundwater sample analyzed for dissolved RCRA Metals. The sample containers were placed in a cooler with ice for storage and transport to the analytical laboratory. A total of five groundwater samples were collected for laboratory analysis using the following methods:

- DRO (Wisconsin Method DRO);
- GRO (Wisconsin Modified GRO);
- VOCs (EPA 8260);
- TCLP Metals (EPA 6010 / 200.7 / EPA 7470)

Samples collected were labeled corresponding to the soil boring where they were collected (e.g., SB-1 or TW-1). For example, a groundwater sample collected from boring SB-01 was labeled “TW-01.”

3.0 SAMPLING RESULTS AND EVALUATION

Samples were collected from the intervals in each boring per the sampling rationale in the Work Plan (**Appendix D**). Soil sample laboratory results are summarized in **Tables 2a and 2b**. Groundwater sample laboratory results are summarized in **Table 3**. The laboratory analytical reports are included in **Appendix C**.

Analytical results were compared to Wisconsin Department of Natural Resources (DNR) residual contaminant levels (RCLs) and enforcement standards (ESs). Specifically, soil analytical results were compared to DNR Groundwater RCLs, Non-Industrial RCLs, and Industrial Direct Contact (DC) RCLs. Groundwater analytical results were compared to NR140 ESs and NR140 Preventative Action Limits (PALs).

Regulating criteria have not been established for DRO and GRO; however, a typical action level for these parameters in an unrestricted use setting is 100 milligram per kilogram (mg/kg) in soil.

Analytical results from the Phase 2.5 are discussed in the following sections.

3.1 Closed Shell Station Site

3.1.1 Soil Analytical Results

Seven soil borings were advanced at the Closed Shell Station site for soil sample collection (SB-01 through SB-07) and ten soil samples were submitted for laboratory analysis. The following sections summarize the soil sample analytical results:

3.1.1.1 Petroleum

GRO was detected at concentrations exceeding the laboratory reporting limits in soil samples collected from borings SB-01, SB-02, SB-05, and SB-06 with concentrations ranging from 1.4 mg/kg to 209 mg/kg. GRO detections within the soil samples were as follows: SB-01(8-10.5): 1.4 mg/kg; SB-02(6-8): 4.9 mg/kg; SB-05(4-6): 6.1 mg/kg; SB-05(6-7): 209 mg/kg; and SB-06(4-6): 5.2 mg/kg.

DRO was detected at concentrations exceeding the laboratory reporting limits in soil samples collected from borings SB-02, SB-03, SB-05, and SB-06 with concentrations ranging from 1.6 mg/kg to 61.4 mg/kg. DRO detections within the soil samples were as follows: SB-02(6-8): 1.6 mg/kg; SB-03(2-4): 2.4 mg/kg; SB-05(4-6): 10.5 mg/kg; SB-05(6-7): 61.4 mg/kg; and SB-06(2-3): 1.4 mg/kg. As stated in **Section 3.0**, DNR has not established comparison criteria for GRO and DRO, however typical action levels used for these parameters in an unrestricted use setting is 100 mg/kg in soil.

3.1.1.2 Volatile Organic Compounds

VOCs were detected at levels that exceed their respective regulatory criteria in two soil samples. In sample SB-04(6-7), the benzene concentration was 0.0703 mg/kg which exceeds its respective groundwater RCL.

In sample SB-05(6-7), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, and toluene were detected at 54.7, 13.1, 0709, and 1.83 mg/kg, respectively, exceeding their respective groundwater RCLs. Sample SB-05(6-7) also had an ethylbenzene concentration of 16.6 mg/kg and a naphthalene concentration of 6.18 mg/kg, both of which exceed the Industrial RCL.

Various other VOCs were detection at concentrations exceeding laboratory reporting limits in soil samples SB-02(6-8), SB-05(4-6), and SB-05(6-7); however, these concentrations did not exceed their corresponding regulatory criteria.

3.1.1.3 Metals

Various RCRA metals were detected in all ten soil samples collected at concentrations exceeding their respective laboratory reporting limits; however, none of the concentrations exceeded their corresponding regulatory criteria.

3.1.2 Groundwater Analytical Results

Three temporary wells were installed at the Closed Shell Station Site to collect groundwater samples (TW-01, TW-02, and TW-03). The following sections summarize the groundwater sample analytical results:

3.1.2.1 Petroleum

GRO was detected at a concentration exceeding the laboratory reporting limits in groundwater sample TW-01, TW-02, and TW-03 at a concentration of 102 µg/L, 6590 µg/L, and 7630 µg/L. DRO was also detected at a concentration exceeding the laboratory reporting limits in at concentrations of 180 µg/L, 920 µg/L, and 3,200 µg/L. As stated in **Section 3.0**, regulatory criteria have not been established for these parameters.

3.1.2.2 Volatile Organic Compounds

Multiple VOC concentrations exceeding laboratory reporting limits were detected in all three samples (TW-01, TW-02, and TW-03).

In TW-01, benzene was detected at 4.8 µg/L, exceeding the NR140 Preventative Action Limits.

In sample TW-02, ethylbenzene and naphthalene detections exceeded the PALs at concentrations of 547 µg/L and 94.3 µg/L, respectively. Benzene was detected at 1710 µg/L, which exceeds the ES.

Detections of benzene, ethylbenzene, and naphthalene in TW-03 exceed the ES at 879 µg/L, 1230 µg/L, and 182 µg/L, respectively. Toluene exceeded the PAL at 493 µg/L.

3.1.2.3 Metals

Metals were not detected at concentrations exceeding their respective laboratory reporting limit with the exception of Barium in TW-01, TW-02, and TW-03; however, barium concentrations did not exceed the corresponding regulatory criteria.

3.2 Active Mobil Station Site

3.2.1 Soil Analytical Results

Seven soil borings were advanced at the Active Mobil Station site for soil sample collection (SB-08 through SB-14) and nine soil samples were submitted for laboratory analysis. The following sections summarize the soil sample analytical results:

3.2.1.1 Petroleum

GRO was detected at a concentration exceeding the laboratory reporting limit in soil samples collected from SB-10, SB-11, and SB-13 with results ranging from 51.1 to 2050 mg/kg. GRO detections were the following: SB-10(2-4): 2050 mg/kg; SB-10(6-7.5): 217 mg/kg; SB-11(4-6): 51.1 mg/kg; and SB-11(6-8): 295 mg/kg.

DRO was detected at concentrations exceeding the laboratory reporting limit in soil samples collected from SB-10, SB-11, and SB-13 ranging from 1.3 mg/kg to 707 mg/kg. DRO detections were as follows: SB-10(2-4): 707 mg/kg; SB-10(6-7.5): 11.3 mg/kg; SB-11(4-6): 2.3 mg/kg; SB-11(6-8): 41.3 mg/kg; and SB-13(6-7.5): 1.3 mg/kg.

As stated in **Section 3.0**, DNR has not established comparison criteria for GRO and DRO, however typical action levels used for these parameters in an unrestricted use setting is 100 milligram per kilogram (mg/kg) in soil.

3.2.1.2 Volatile Organic Compounds

VOCs were detected at levels that exceed their respective regulatory criteria in three soil samples. In sample SB-11(6-8), the 1,2,4-trimethylbenzene and naphthalene concentrations were 5.71 mg/kg and 0.862 mg/kg, which exceeds their respective groundwater RCL.

In sample SB-10(2-4), 1,2,4-trimethylbenzene and naphthalene were detected at 286 and 35.3 mg/kg, respectively, exceeding their Non-Industrial RCLs. Sample SB-10(2-4) also had an 1,3,5-trimethylbenzene concentration of 89.1 mg/kg and an ethylbenzene concentration of 17.6 mg/kg, which exceeds the groundwater RCL and Industrial RCL, respectively.

In sample SB-10(6-7.5), 1,2,4-Trimethylbenzene and 1,3,5-Trimethylbenzene were detected at concentrations of 6.91 mg/kg and 1.5 mg/kg, which exceeds the respective groundwater RCLs.

Various other VOCs were detection at concentrations exceeding laboratory reporting limits in soil samples SB-10(2-4), SB-10(6-7.5), SB-11(4-6), and SB-11(6-8); however, these concentrations did not exceed their corresponding regulatory criteria.

3.2.1.3 Metals

Various RCRA metals were detected in all nine soils samples collected at the Active Mobile Station Site at concentrations exceeding their respective laboratory reporting limits. All detections exceeding laboratory reporting limits did not exceed their corresponding TCLP criteria.

3.2.2 Groundwater Analytical Results

Two temporary wells were installed at the Express Mart Site to collect groundwater samples (TW-04, and TW-05). The following sections summarize the groundwater sample analytical results:

3.2.2.1 Petroleum

Groundwater samples exceeding the laboratory reporting limits for DRO were found at concentrations of 4,300 µg/L and 55 µg/L at TW-04 and TW-05, respectively. GRO was detected in TW-04 at 4,090 µg/L. As stated in **Section 3.0**, comparison criteria have not been established for these parameters.

3.2.2.2 Volatile Organic Compounds

Multiple VOC detections exceeding laboratory reporting limits were encountered in both groundwater samples. Of these detections, benzene concentrations in TW-03 exceeded the NR140 Enforcement Standards and NR140 Preventative Action Limits at 5.3 µg/L. Naphthalene exceeded the NR140 Preventative Action Limits at 15.5 µg/L.

3.2.2.3 Metals

Metals were not detected at concentrations exceeding their respective laboratory reporting limit except for Barium in samples TW-04, and TW-05. Barium concentrations did not exceed the corresponding regulatory criteria.

4.0 RECOMMENDATIONS

Findings, considerations, and recommendations from this Phase 2.5 Investigation Report are as follows:

4.1 Closed Shell Station

The Closed Shell Station site is a known LUST site with documents stating that contaminated soil and groundwater remain on-site as noted from the Phase I investigation. This Phase 2.5 Investigation Report identifies locations within the site where sub-surface soil and groundwater remains impacted with various contaminants.

4.1.1 Summary of Findings

Soil contamination was encountered from of 6–7 feet bgs. Groundwater was encountered between 4.46–7.82 feet bgs, and groundwater contamination was identified at TW-01, TW-02, and TW-03. Soil contamination was identified from approximate construction survey point STA 717+45 eastward associated with soil borings SB-04 and SB-05. PID headspace readings collected during soil sample collection are tabulated in **Table 1**. The nature of contamination is as follows:

- Petroleum contamination (GRO/DRO) above 100mg/kg has been identified in SB-05 from 6 to 7 feet bgs.
- Non-Industrial RCL soil exceedances: Ethylbenzene (0.19 mg/kg) and naphthalene (10.5 mg/kg) identified at SB-05 at depths of 6 to 7 feet bgs. Naphthalene concentration of 6.3 mg/kg identified in SB-4 from 8 to 10 feet bgs.
- Groundwater RCL soil exceedances: Benzene (0.0703 mg/kg) identified within SB-04 from 6 to 7 feet bgs. Benzene (0.709 mg/kg), 1,2,4-trimethylbenzene (54.7 mg/kg), 1,3,5-trimethylbenzene (13.1 mg/kg), naphthalene (6.18 g/kg) and toluene (1.83 mg/kg) were identified in SB-05 from 6 to 7 feet bgs
- Petroleum contamination was identified in groundwater samples collected from TW-01, TW-02, and TW-03 at the following levels:
    - TW-01: DRO: 180 µg/L; GRO: 102 µg/L.
    - TW-02: DRO: 920 µg/L; GRO: 6590 µg/L.
    - TW-03: DRO 3200 µg/L; GRO: 7630 µg/L.
- VOC contaminants in the groundwater identified in samples TW-01, TW-02, and TW-03 exceeding corresponding NR140 Enforcement Standards or NR140 Preventative Action Limits are as follows.
    - TW-01: Benzene: 4.8 µg/L
    - TW-02: Benzene: 1710 µg/L; ethylbenzene: 547 µg/L; and naphthalene: 94.3 µg/L
    - TW-03: Benzene: 879 µg/L; ethylbenzene: 1230 µg/L; naphthalene: 182 µg/L; and Toluene: 493 µg/L

4.1.2 Special Provisions

Special provisions will need to be considered when conducting construction activities that would disturb soil and groundwater within the proximity of the boring locations described above. Requirements to manage contaminated soil and groundwater during construction should be applied to the following location:

- Soil is contaminated from 6-7 feet bgs at locations SB-05 and SB-04 and occupies an area of approximately 15 by 25 square yards. Approximately 375 cubic yards

(approximately 565 tons using a conversion factor of 1.5 tons per cubic yard) of impacted soil remains on site. Petroleum impacted groundwater was encountered from 4 to 8 feet bgs within this location.

The Closed Shell Station Special Provisions map is included as **Figure 3.**

4.1.3 Recommendations

This Phase 2.5 report takes into consideration the historical use of this property and the identification of residual contaminated soil and groundwater at this site and therefore recommends environmental oversight by an approved environmental consultant during construction activities at depths greater than 2 feet bgs. Based on the Phase 2.5 findings, surficial construction activities such as road construction do not appear to pose risk of encountering contaminated soils and groundwater; however, utility installations or storm sewer installation/replacements (subsurface work greater than 4 feet bgs) through the areas described above may be at risk of encountering contaminated soil and groundwater that requires special handling, treatment, and/or disposal at a landfill.

4.2 Active Mobile Station

The active Mobile Station site operated as a current gas station and is a known LUST site with documents stating that contaminated soil and groundwater remain on-site as noted from the Phase I investigation. This Phase 2.5 investigation report identifies locations with impacted soil and groundwater.

4.2.1 Summary of Findings

Soil contamination was identified exceeding laboratory reporting limits at borings SB-10 and SB-11 (**Figure 4**). Groundwater was encountered between 4 –5 feet bgs and groundwater contamination exceeding corresponding regulatory criteria was identified at TW-04 and TW-05. PID headspace readings collected during soil sample collection are tabulated in **Table 1**. The nature of contamination is as follows:

- Petroleum contamination (GRO/DRO) in soil has been identified exceeding laboratory reporting limits within borings SB-10, SB-11, and SB-13 from the 2 to 8 feet bgs ranging concentrations between 1.3 mg/kg to 2050 mg/kg.
- Non-Industrial RCL soil exceedances: 1,2,4-trimethylbenzene (286 mg/kg) and naphthalene (35.3 mg/kg) identified at SB-10 at depths of 2 to 4 feet bgs.
- Industrial RCL soil exceedances: Ethylbenzene (17.6 mg/kg), 1,2,4-trimethylbenzene (286 mg/kg) and naphthalene (35.3 mg/kg) were identified at SB-10 from 2 to 4 feet bgs.
- Groundwater RCL soil exceedances: 1,3,5-trimethylbenzene (89.1 mg/kg) was identified in SB-10 from 2 to 4 feet bgs. 1,2,4-trimethylbenzene (6.91 mg/kg) and 1,3,5-trimethylbenzene (1.5 mg/kg) were identified in SB-10 from 6 to 7.5 feet bgs. Naphthalene (0.862 mg/kg) was identified in SB-11 from 6 to 8 feet bgs.
- Naphthalene concentrations within soil boring SB-11 from the 6 to 8 feet bgs depth interval exceeded the Groundwater RCL regulatory threshold criteria.
- Concentrations of 1,2,4-trimethylbenzene and 1,2,5-trimethylbenzene exceeding the corresponding Groundwater RCL were identified within the 6 to 7.5 feet bgs depth interval of SB-10. Concentrations within the 2 to 4 feet bgs depth interval of boring SB-10 (286 mg/kg) also exceeded the Background Threshold Value of 52 mg/kg.
- Petroleum (GRO/DRO) contamination was identified within groundwater from TW-04 (GRO: 4,090 µg/L, 4,300 µg/L).

- Petroleum (DRO) contamination was identified within groundwater from TW-05 (DRO: 55 µg/L).
- VOC contaminants in the groundwater identified in samples TW-04 exceeding corresponding NR140 Enforcement Standards or NR140 Preventative Action Limits are as follows.
    - TW-01: Benzene: 5.3 µg/L; and naphthalene: 15.5 µg/L

4.2.2 Special Provisions

Special provisions will need to be considered when conducting construction activities that would disturb soil and groundwater near the boring locations described above. Requirements to manage petroleum-contaminated soil and groundwater during construction should be applied to the following locations:

- Proximity to SB-10 and SB-11: from 2 to 8 feet bgs soil is impacted with petroleum hydrocarbons in an approximate 10 by25 square yard area. Approximately 500 cubic yards (750 tons using a conversion factor of 1.5 tons per cubic yard) of impacted soil remains at this location.
- Groundwater from TW-04 is contaminated with concentration of naphthalene exceeding the NR140 Preventative Action Limits. Groundwater from the same location is contaminated with benzene above NR140 Enforcement Standards and NR140 Preventative Action Limits.

The Active Mobile Station Special provisions map is included in **Figure 4**.

4.2.3 Recommendations

This Phase 2.5 report takes into consideration the historical use of this property and the identification of residual contaminated soil and groundwater at this site and therefore recommends the preparation of a soil management plan and environmental oversight by an approved environmental consultant during all construction activities involving the disturbance of soil or groundwater at this site. Residual petroleum hydrocarbon soil contamination is also present at depths of 2 to 8 feet bgs. Environmental oversight provided by an approved consultant is recommended during construction activities that include sub-surface disturbances greater than 2 feet bgs to aid in management of impacted soil.

Shallow groundwater was encountered throughout the site ranging from 4 to 5 feet bgs. Groundwater near the center of the site is contaminated with petroleum constituents exceeding their corresponding NR140 Enforcement Standards and NR140 Preventative Action Limits. Groundwater may be encountered during subsurface construction activities that are greater than 4 feet bgs. If construction dewatering is necessary on this Site, removed groundwater may require management or containment. Sampling of excavation water may be necessary for disposal profiling purposes.

Notes:
* Other qualifiers may apply, see laboratory report for sample delivery groups 40234317 and 40234318
mg/Kg – milligrams per kilogram
WDNR – Wisconsin Department of Natural Resources
RCL – Residual Contaminant Levels
RCLs as published by the WDNR December 2018, Chapter 720
SB – Soil boring
- – Action level not established for this analyte
U – Compound was analyzed for, but not detected at or above the adjusted limit of detection (LOD)
J – Estimated result: concentration is above the LOD and below the limit of quantitation (LOQ)
Italics – Result exceeds the Groundwater RCL
Underline – Result exceeds the Non–Industrial RCL
Bold – Result exceeds the Industrial RCL

Notes:
* Other qualifiers may apply, see laboratory report for sample delivery groups 40234317 and 40234318
mg/Kg – milligrams per kilogram
WDNR – Wisconsin Department of Natural Resources
RCL – Residual Contaminant Levels
RCLs as published by the WDNR December 2018, Chapter 720
SB – Soil boring
- – Action level not established for this analyte
U – Compound was analyzed for, but not detected at or above the adjusted limit of detection (LOD)
J – Estimated result: concentration is above the LOD and below the limit of quantitation (LOQ)
Italics – Result exceeds the Groundwater RCL
Underline – Result exceeds the Non–Industrial RCL
Bold – Result exceeds the Industrial RCL

µg/L – micrograms per liter

WDNR – Wisconsin Department of Natural Resources

Enforcement Standards (ES) and Preventive Action Limits (PAL) as published by the WDNR, Chapter 140

TW – Temporary well

- – Action level not established for this analyte

U – Compound was analyzed for, but not detected at or above the adjusted limit of detection (LOD)

J – Estimated result: concentration is above the LOD and below the limit of quantitation (LOQ)

Underline – Result exceeds the ES

Bold – Result exceeds the PAL

Terry F Stingle	Hwy 55	1 UST on site- In Use (500 gallons, leaded gasoline)
Michael J Peters	2743 Hwy 55, Seymour, WI	1 UST on site- In Use (500 gallons, leaded gasoline)
Milton J Peters	2882 Hwy 55, Seymour, WI	1 UST on site- In Use (320 gallons, leaded gasoline)

WisDOT Phase 1 Hazardous Materials Assessment Site Summary
(rev. 2/2016)

Instructions: following FDM 21-35-5, perform site assessment, fill in information for each site investigated. Multiple sites with no identified environmental concerns may be summarized on one form.

Recommendation acceptance/rejection/modification should be completed and signed by the person with the authority to make project decisions (for example: region hazardous materials coordinator, project manager, local road management consultant)

WisDOT Project ID: 6230-20-00
Highway/Street: STH 54
Termini/Limits: French Rd – Seminary Rd
County or Counties: Outagamie

Property Information:
Site Name(s): Seymour Mobil/Condon Oil Mobil
DOT parcel number (if known):
Property Address: 140 STH 54, Seymour, WI 54165
Owner's Name:
Owner's Address:
Owner's Phone:
Current Land Use:
Past Land Use:

Real Estate Requirements:
☐None ☐Total take ☐Strip acquisition of feet
☐Temporary Limited Easement (TLE)
☐Permanent Limited Easement (PLE)
☐ Other (describe)

Construction Requirements:
☐ Excavation within current right of way to a depth of feet
☐ Excavation within proposed right of way to a depth of feet
☐ Excavation within easement to a depth of feet
☐ Public or private utility or sanitary or storm sewer installation or excavation to a depth of feet

Information from database searches and interviews:
Department of Agriculture, Trade and Consumer Protection (DATCP)
- ☒ site has 8 (number) registered tanks ☐ASTs (number) ☒USTs 8 (number)
- ☒ tanks are currently in use 4 (number)
- ☒ some 4 (number) ☐ all tanks are abandoned; date(s): 10/11/2000
- Tank contents and total number of tanks, both in place and abandoned:
  - ☐ Leaded gasoline ☒ Unleaded gasoline 6 ☐ Fuel Oil
  - ☒ Diesel 2 ☐ Kerosene ☐ Unknown ☐ Other (describe)
- Comments:

Department of Natural Resources (DNR)
- ☒ site is a DNR administered LUST site; BRRTS number: 03-45-153996
- ☐ site is a DNR administered ERP site; BRRTS number:
- ☒ site is a closed ☒LUST ☐ERP site; closure date: 9/28/2007
- ☐ site is a landfill
- ☐ site is an abandoned waste disposal site
- ☒ site is a hazardous waste generator EPA Generator ID: WIR000104786
- ☐ site is a spill site
- ☐ site has continuing obligations (attach copy of closure letter with continuing obligations)
- ☐ Other (please describe)

Sanborn Maps: site is a on map dated . Comments:

A check in a checkbox indicates a positive or "yes" response

WisDOT historic plan sets: site is a gas station on project s0324(4); f038-2(18) dated 1964; 1952. Comments:

Business directories: site is a in the directory dated . Comments:
Aerial photos: site is a on photo dated . Comments:
☐ Contamination discovered at feet during utility or other excavation in the area. Indicate location on site map.
Interview Information or other comments:

Visual Evidence of Potential Contamination: (include additional information in space provided)
☐ No evidence of tanks
☐ USTs ☐ASTs Location, number and condition of tanks, contents, comments:
Location in relationship to current right of way: ☐ map attached
Location in relationship to proposed right of way: ☐ map attached
☐ Drums ☐Stained soils ☐Odor ☐Sheen on surface water ☐Areas of excavation ☐ Areas of fill
☐Stressed vegetation ☐ Pond(s) ☐ Basins/sumps ☐ Monitoring wells ☐ Soil borings
Comments:

Potential for Contaminant Migration: (attach supporting documentation such as plume maps, summaries of site investigation or closure reports).
☐ Property is a potential source of contamination
☐ Adjacent property is a potential source of contamination. Include site name and address or BRRTS number if known, describe location, and include contaminant type and any additional information.
☐ Contaminated soil within proposed right of way from feet to feet below ground surface
☐ Contaminated groundwater within proposed right of way at feet below ground surface.
☐ Contaminated soil or groundwater within existing right of way. Attach copy of most recent investigation and plume maps or DNR form 4400-286 and plume maps.

Attachments – required
☒ Site photographs and a site map showing areas of concern
☐ Plat map showing parcel and any proposed areas of acquisition or easement
☐ Historic aerial photos of site - clearly outline site
☒ Historic WisDOT or other as-builts and plat maps - clearly outline site
☐ Plume maps for known contamination. Indicate existing or proposed right of way on plume maps where applicable.
☒ Closure letter with continuing obligations for sites closed with continuing obligations

Recommendations
☐ No additional hazardous materials investigation is required.
☐ If construction or real estate requirements change, evaluation of need for further investigation will be necessary.
☐ Information is sufficient to use Standard Special Provisions. Copy of completed Standard Special Provision is attached.
☐ Conduct additional investigation
- ☐ Phase 2 (determine if contamination is present)
- ☐ Phase 2.5 (determine extent of contamination within existing R/W only)
- ☐ Phase 3 (determine full extent of contamination prior to acquisition)
- ☐ Phase 4 (remediate site)
- ☐ Other (describe)

☐ Site has continuing obligations. Coordination with DNR will be required.

Prepared by: Marisa Christie on 11/27/2019
Recommendations ☐accepted ☐modified ☐rejected by: Name and Title on
Modifications:
Signature of person accepting/modifying/rejecting recommendations:

CONTINUING OBLIGATIONS APPLY

Due to remaining contamination, continuing obligations apply to one or more properties. For information specific to the continuing obligations review the documentation below. Prior to constructing or reconstructing a water supply well, you need to contact DNR for approval of well construction specifications.

IMPACTED ANOTHER PROPERTY OR RIGHT-OF-WAY

A hazardous substance discharge originating from this property has impacted one or more other properties or right-of-ways (ROWS). For more information, please review the documents below. Certain exemptions regarding the cleanup of impacted properties under Wisconsin Stat. Section 292.13 may apply.

Mr. Leon Westerfeld
Westerfeld Oil Co.
PO Box 85
Cecil, WI 54111

SUBJECT: Final Case Closure with Land Use Limitations or Conditions
Seymour Mobil, 310 STH 54/55, Seymour, WI
WDNR BRRTS Activity #: 03-45-153996, PECFA Claim # 54165-1904-10

Dear Mr. Westerfeld:

On August 13, 2007, the Department's Northeast Region Closure Committee reviewed the above referenced case for closure. This committee reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. On August 24, 2007, you were notified that the Closure Committee had granted conditional closure to this case.

On September 24, 2007, the Department received correspondence indicating that you have complied with the requirements of closure. The correspondence included a cap maintenance plan and monitoring well abandonment forms.

Based on the correspondence and data provided, it appears that your case meets the requirements of ch. NR 726, Wisconsin Administrative Code. The Department considers this case closed and no further investigation or remediation is required at this time.

Closure Conditions

Please be aware that pursuant to s. 292.12 Wisconsin Statutes, compliance with the requirements of this letter is a responsibility to which the current property owner and any subsequent property owners must adhere. If these requirements are not followed or if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety, welfare, or the environment, the Department may take enforcement action under s. 292.11 Wisconsin Statutes to ensure compliance with the specified requirements, limitations or other conditions related to the property or this case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code. It is the Department's intent to conduct inspections in the future to ensure that the conditions included in this letter including compliance with referenced maintenance plans are met.

Cover or Barrier

Pursuant to s. 292.12(2)(a), Wis. Stats., the pavement or other impervious cap that currently exists in the location shown on the attached map shall be maintained in compliance with the **attached maintenance plan** in order to minimize the infiltration of water and prevent additional

groundwater contamination that would violate the groundwater quality standards in ch. NR 140, Wis. Adm. Code, and to prevent direct contact with residual soil contamination that might otherwise pose a threat to human health. If soil in the specific locations described above is excavated in the future, the property owner at the time of excavation must sample and analyze the excavated soil to determine if residual contamination remains. If sampling confirms that contamination is present the property owner at the time of excavation will need to determine whether the material would be considered solid or hazardous waste and ensure that any storage, treatment or disposal is in compliance with applicable statutes and rules. In addition, all current and future owners and occupants of the property need to be aware that excavation of the contaminated soil may pose an inhalation or other direct contact hazard and as a result special precautions may need to be taken during excavation activities to prevent a health threat to humans.

Prohibited Activities

The following activities are prohibited on any portion of the property where [pavement, a building foundation, soil cover, engineered cap or other barrier] is required as shown on the attached map, unless prior written approval has been obtained from the Wisconsin Department of Natural Resources: 1) removal of the existing barrier; 2) replacement with another barrier; 3) excavating or grading of the land surface; 4) filling on capped or paved areas; 5) plowing for agricultural cultivation; or 6) construction or placement of a building or other structure.

Vapor Migration

In addition, depending on site-specific conditions, construction over contaminated materials may result in vapor migration into enclosed structures or migration along newly placed underground utility lines. The potential for vapor inhalation and mitigation should be evaluated when planning any future redevelopment, and measures should be taken to ensure the continued protection of public health, safety, welfare and the environment at the site.

GIS Registry

Your site will be listed on the DNR Remediation and Redevelopment GIS Registry of Closed Remediation Sites for the following reasons:

Remaining Residual Groundwater Contamination

Remaining Residual Soil Contamination

Maintenance of Existing Cover or Barrier

Information that was submitted with your closure request application will be included on the GIS Registry. To review the sites on the GIS Registry web page, visit http://dnr.wi.gov/org/aw/rr/gis/index.htm. If your property is listed on the GIS Registry because of remaining contamination and you intend to construct or reconstruct a well, you will need prior Department approval in accordance with s. NR 812.09(4)(w), Wis. Adm. Code. To obtain approval, Form 3300-254 needs to be completed and submitted to the DNR Drinking and Groundwater program's regional water supply specialist. This form can be obtained on-line http://www.dnr.state.wi.us/org/water/dwg/3300254.pdf or at the web address listed above for the GIS Registry.

The Department appreciates your efforts to restore the environment at this site. If you have any questions regarding this closure decision or anything outlined in this letter, please contact Tom Sturm at 715-526-4230

Sincerely,

Bruce G. Urben
Northeast Region Remediation & Redevelopment Team Supervisor

PAVEMENT COVER MAINTENANCE PLAN

September 20, 2007

Seymour Mobil

Property Located at:

310 State Highway 54/55, Seymour, WI 54165

FID # none, WDNR BRRTS # 03-45-153996

See attached deed for legal description (Exhibit A). TAX # 34-0-1193-02

Introduction

This document is the Maintenance Plan for a pavement cover at the above-referenced property in accordance with the requirements of s. NR 724.13(2), Wisconsin Administrative Code. The maintenance activities relate to the existing paved surfaces occupying the area over the contaminated soil and groundwater on the property. The contaminated soil and groundwater is impacted by Gasoline Range Organics, 1,2,4 & 1,3,5-Trimethylbenzene, Benzene, Ethylbenzene, Xylene's, Toluene, and Naphthalene. The location of the paved surfaces and building structure to be maintained in accordance with this Maintenance Plan, as well as the impacted soil are identified in the attached map (Exhibit B).

Cover Purpose

The paved surfaces over the contaminated soil and groundwater serve as a barrier to prevent direct human contact with residual soil contamination that might otherwise pose a threat to human health. The paved surfaces also act as a partial infiltration barrier to minimize future soil-to-groundwater contaminant migration that would violate the groundwater standards in ch. NR 140, Wisconsin Administrative Code. Based on the current and future use of the property, the barrier should function as intended unless disturbed.

Annual Inspection

The paved surface overlying the contaminated soil and groundwater as depicted in Exhibit B will be inspected once a year, normally in the spring after all snow and ice is gone, for deterioration, cracks and other potential problems that can cause additional infiltration into underlying soils. The inspections will be performed to evaluate damage due to settling, exposure to the weather, wear from traffic, increasing age and other factors. Any area where soils have become or are likely to become exposed will be documented. A log of the inspections and any repairs will be maintained by the property owner and is included as Exhibit C, Cap Inspection Log. The log will include

recommendations for necessary repair of any areas where underlying soils are exposed. Once repairs are completed, they will be documented in the inspection log. A copy of the inspection log will be sent to the Wisconsin Department of Natural Resources (WDNR) at least annually after every inspection, unless otherwise directed in the case closure letter.

Maintenance Activities

If problems are noted during the annual inspections or at any other time during the year, repairs will be scheduled as soon as practical. Repairs can include patching and filling operations or they can include larger resurfacing or construction operations. In the event that necessary maintenance activities expose the underlying soil, the owner must inform maintenance workers of the direct contact exposure hazard and provide them with appropriate personal protection equipment ("PPE"). The owner must also sample any soil that is excavated from the site or property prior to disposal to ascertain if contaminants remain. The soil must be treated, stored and disposed of by the owner in accordance with applicable local, state and federal law.

In the event the paved surfaces overlying the contaminated soil/groundwater are removed or replaced, the replacement barrier must be, at a minimum, equally impervious as the original paved surfaces. Any replacement barrier will be subject to the same maintenance and inspection guidelines as outlined in this Maintenance Plan unless indicated otherwise by the WDNR or its successor.

The property owner, in order to maintain the integrity of the paved surfaces, will maintain a copy of this Maintenance Plan on-site and make it available to all interested parties (i.e. on-site employees, contractors, future property owners, etc.) for viewing.

Amendment or Withdrawal of Maintenance Plan

This Maintenance Plan can be amended or withdrawn by the property owner and its successors with the written approval of WDNR.

Subject: Conditional Closure Decision,
With Requirements to Achieve Final Closure
Seymour Mobil, 310 STH 54/55, Seymour, Wisconsin
WDNR BRRTS Activity # 03-45-153996, PECFA Claim#54165-1904-10

Dear Mr. Westerfeld:

On August 13, 2007, the Department's Northeast Region Closure Committee reviewed your request for closure of the case described above. The Committee reviews environmental remediation cases for compliance with state rules and statutes to maintain consistency in the closure of these cases. After careful review of the closure request, the Committee has determined that the petroleum contamination on the above site appears to have been investigated and remediated to the extent practicable under site conditions to Department standards in accordance with s. NR 726.05, Wis. Adm. Code and will be closed if the following conditions are satisfied:

MONITORING WELL ABANDONMENT
The monitoring wells and all piping associated with the remedial system at the site must be properly abandoned in compliance with ch. NR 141, Wis. Adm. Code. Documentation of well abandonment must be submitted to Tom Sturm at the above address on Form 3300-5B found at www.dnr.state.wi.us/org/water/dwg/gw/ or provided by the Department of Natural Resources.

PURGE WATER, INVESTIGATIVE WASTE AND SOIL PILE REMOVAL
Any remaining purge water, waste and/or soil piles generated as part of site investigation or remediation activities must be removed from the site and disposed of or treated in accordance with Department of Natural Resources' rules. Once that work is completed, please send appropriate documentation regarding the treatment or disposal of the remaining purge water, waste and/or soil piles.

CAP MAINTENANCE PLAN
The site will be closed with the requirement that the existing impervious cap be maintained to protect the groundwater from the remaining contamination at the site. A maintenance plan detailing how this cap will be maintained shall be submitted to me at the above address.

When the above conditions have been satisfied, please submit the appropriate documentation (for example, well abandonment forms, disposal receipts, copies of correspondence, etc.) to verify that applicable conditions have been met, and your case will be closed. Your site will be

listed on the DNR Remediation and Redevelopment GIS Registry of Closed Remediation Sites. Information that was submitted with your closure request application will be included on the GIS Registry. To review the site on the GIS Registry web page, visit http://maps.dnr.state.wi.us/brrts.

Section 101.143, Wis. Stats., requires that PECFA claimants seeking reimbursement of interest costs, for sites with petroleum contamination, submit a final reimbursement claim within 120 days after they receive a closure letter on their site. For claims not received by the PECFA Program within 120 days of the date of this letter, interest costs after 60 days of the date of this letter will not be eligible for PECFA reimbursement. If there is equipment purchased with PECFA funds remaining at the site, contact the Commerce PECFA Program to determine the method for salvaging the equipment.

Please be aware that the case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code, if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety, or welfare or to the environment.

We appreciate your efforts to restore the environment at this site. If you have any questions regarding this letter, please contact me at 715-526-4230.

Sincerely,

Tom Sturm

WisDOT Phase 1 Hazardous Materials Assessment Site Summary
(rev. 2/2016)

Instructions: following FDM 21-35-5, perform site assessment, fill in information for each site investigated. Multiple sites with no identified environmental concerns may be summarized on one form.

Recommendation acceptance/rejection/modification should be completed and signed by the person with the authority to make project decisions (for example: region hazardous materials coordinator, project manager, local road management consultant)

WisDOT Project ID: 6230-20-00
Highway/Street: STH 54
Termini/Limits: French Rd – Seminary Rd
County or Counties: Outagamie

Property Information:
Site Name(s): Coonen Inc
DOT parcel number (if known):
Property Address: 1043 Ivory St, Seymour, WI 54165
Owner's Name:
Owner's Address:
Owner's Phone:
Current Land Use:
Past Land Use:

Real Estate Requirements:
☐None ☐Total take ☐Strip acquisition of feet
☐Temporary Limited Easement (TLE)
☐Permanent Limited Easement (PLE)
☐ Other (describe)

Construction Requirements:
☐ Excavation within current right of way to a depth of feet
☐ Excavation within proposed right of way to a depth of feet
☐ Excavation within easement to a depth of feet
☐ Public or private utility or sanitary or storm sewer installation or excavation to a depth of feet

Information from database searches and interviews:
Department of Agriculture, Trade and Consumer Protection (DATCP)
- ☐ site has (number) registered tanks ☐ASTs (number) ☐USTs (number)
- ☐ tanks are currently in use (number)
- ☐ some (number) ☐ all tanks are abandoned date(s):
- Tank contents and total number of tanks, both in place and abandoned:
  - ☐ Leaded gasoline ☐ Unleaded gasoline ☐ Fuel Oil
  - ☐ Diesel ☐ Kerosene ☐ Unknown ☐ Other (describe)
- Comments:

Department of Natural Resources (DNR)
- ☒ site is a DNR administered LUST site; BRRTS number: 03-45-001819; 03-45-213120
- ☐ site is a DNR administered ERP site; BRRTS number:
- ☒ site is a closed ☒LUST ☐ERP site; closure date: 6/18/1996; 11/10/2009
- ☐ site is a landfill
- ☐ site is an abandoned waste disposal site
- ☒ site is a hazardous waste generator EPA Generator ID: 110005540370
- ☒ site is a spill site; BRRTS number: 04-45-559757; closure date: 2/16/2012
- ☒ site has continuing obligations (attach copy of closure letter with continuing obligations)
- ☐ Other (please describe)

Sanborn Maps: site is a on map dated . Comments:

A check in a checkbox indicates a positive or "yes" response

WisDOT historic plan sets: site is a gas station on project f038-2(18) dated 1952. Comments:
Business directories: site is a in the directory dated . Comments:
Aerial photos: site is a on photo dated . Comments:
☐ Contamination discovered at feet during utility or other excavation in the area. Indicate location on site map.
Interview Information or other comments:

Visual Evidence of Potential Contamination: (include additional information in space provided)
☐ No evidence of tanks
☐ USTs ☐ASTs Location, number and condition of tanks, contents, comments:
Location in relationship to current right of way: ☐ map attached
Location in relationship to proposed right of way: ☐ map attached
☐ Drums ☐Stained soils ☐Odor ☐Sheen on surface water ☐Areas of excavation ☐ Areas of fill
☐Stressed vegetation ☐ Pond(s) ☐ Basins/sumps ☐ Monitoring wells ☐ Soil borings
Comments:

Potential for Contaminant Migration: (attach supporting documentation such as plume maps, summaries of site investigation or closure reports).
☐ Property is a potential source of contamination
☐ Adjacent property is a potential source of contamination. Include site name and address or BRRTS number if known, describe location, and include contaminant type and any additional information.
☐ Contaminated soil within proposed right of way from feet to feet below ground surface
☐ Contaminated groundwater within proposed right of way at feet below ground surface.
☐ Contaminated soil or groundwater within existing right of way. Attach copy of most recent investigation and plume maps or DNR form 4400-286 and plume maps.

Attachments – required
☒ Site photographs and a site map showing areas of concern
☐ Plat map showing parcel and any proposed areas of acquisition or easement
☐ Historic aerial photos of site - clearly outline site
☒ Historic WisDOT or other as-builts and plat maps - clearly outline site
☐ Plume maps for known contamination. Indicate existing or proposed right of way on plume maps where applicable.
☒ Closure letter with continuing obligations for sites closed with continuing obligations

Recommendations
☐ No additional hazardous materials investigation is required.
☐ If construction or real estate requirements change, evaluation of need for further investigation will be necessary.
☐ Information is sufficient to use Standard Special Provisions. Copy of completed Standard Special Provision is attached.
☐ Conduct additional investigation
- ☐ Phase 2 (determine if contamination is present)
- ☐ Phase 2.5 (determine extent of contamination within existing R/W only)
- ☐ Phase 3 (determine full extent of contamination prior to acquisition)
- ☐ Phase 4 (remediate site)
- ☐ Other (describe)

☐ Site has continuing obligations. Coordination with DNR will be required.

1043 Ivory Street, Seymour

Dear Mr. Coonen,

On May 29, 1996 the above named site was reviewed by the Northeast Region Closure Committee for a determination on case close out as provided in ch. NR 726, Wis. Adm. Code. Based on the investigative and remedial documentation provided, it appears as though the site has been remediated to acceptable standards. **Therefore, the Department considers the site "closed" and no further action is necessary at this time.**

The Department will continue to track this site as an open case until the proper abandonment form is received for the sump which was installed in the excavation. After the form has been received, the case will appear as "closed" on the tracking system.

The Department appreciates the cooperation you have shown in this matter. If you have any additional questions please call me at 414-424-7887.

Sincerely,

Thomas Verstegen
Hydrogeologist
Bureau for Remediation and Redevelopment

CONTINUING OBLIGATIONS APPLY

Due to remaining contamination, continuing obligations apply to one or more properties. For information specific to the continuing obligations review the documentation below. Prior to constructing or reconstructing a water supply well, you need to contact DNR for approval of well construction specifications.

IMPACTED ANOTHER PROPERTY OR RIGHT-OF-WAY

A hazardous substance discharge originating from this property has impacted one or more other properties or right-of-ways (ROWS). For more information, please review the documents below. Certain exemptions regarding the cleanup of impacted properties under Wisconsin Stat. Section 292.13 may apply.

November 10, 2009

Mr. Robert Coonen
Coonen Inc.
471 Brookwood Dr.
Seymour, WI 54165

SUBJECT: Final Case Closure with Continuing Obligations
Coonen Oil Station, 1043 Ivory St., Seymour, WI
WDNR BRRTS Activity #: 03-45-213120

Dear Mr. Coonen:

On April 25, 2005, the Department's Northeast Region Closure Committee reviewed the above referenced case for closure. This committee reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. On May 16, 2005, you were notified that the Closure Committee had granted conditional closure to this case.

On November 9, 2009 the Department received documentation indicating that you have complied with the requirements for final closure that included a cap maintenance plan and monitoring well abandonment forms.

Based on the correspondence and data provided, it appears that your case meets the closure requirements in ch. NR 726, Wisconsin Administrative Code. The Department considers this case closed and no further investigation or remediation is required at this time, however, you and future property owners must comply with certain continuing obligations as explained in this letter.

GIS Registry

This site will be listed on the Remediation and Redevelopment Program's GIS Registry. The specific reasons are summarized below:

- Residual soil contamination exists that must be properly managed should it be excavated or removed
- Pavement, an engineered cover or a soil barrier must be maintained over contaminated soil and the state must approve any changes to this barrier
- Groundwater contamination is present above Chapter NR 140 enforcement standards

This letter and information that was submitted with your closure request application will be included on the GIS Registry. To review the sites on the GIS Registry web page, visit the RR Sites Map page at http://dnr.wi.gov/org/aw/rr/gis/index.htm. If the property is listed on the GIS Registry because of remaining contamination and you intend to construct or reconstruct a well, you will need prior Department approval in accordance with s. NR 812.09(4)(w), Wis. Adm. Code. To obtain approval, Form 3300-254 needs to be completed and submitted to the DNR Drinking and Groundwater program's

contaminant concentrations, refer to the Remediation and Redevelopment Program's GIS Registry at the RR Sites Map page at http://dnr.wi.gov/org/aw/rr/gis/index.htm.

Dewatering Permits

The Department's Watershed Management Program regulates point source discharges of contaminated water, including discharges to surface waters, storm sewers, pits or to the ground surface. This includes discharges from construction related dewatering activities, including utility and building construction.

Based on the concentrations of contaminants remaining in groundwater at this location, it appears likely that dewatering activities would require a permit from the Watershed Management Program. If you or any other person plan to conduct such activities, you or that person must contact that program, and if necessary, apply for the necessary discharge permit. Additional information regarding discharge permits is available at http://www.dnr.state.wi.us/org/water/wm/ww/

The Department appreciates your efforts to restore the environment at this site. If you have any questions regarding this closure decision or anything outlined in this letter, please contact Tom Sturm at 715-526-4230.

Sincerely,

Bruce G. Urben Team Supervisor
Northeast Region Remediation & Redevelopment Program

SUBJECT: Final Case Closure with Continuing Obligations
Coonen Oil Station, 1043 Ivory St., Seymour, WI
WDNR BRRTS Activity #: 03-45-213120

Dear Coonen:

On April 25, 2005, the Department's Northeast Region Closure Committee reviewed the above referenced case for closure. This committee reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. On May 16, 2005, you were notified that the Closure Committee had granted conditional closure to this case.

On November 9, 2009 the Department received documentation indicating that you have complied with the requirements for final closure that included a cap maintenance plan and monitoring well abandonment forms.

Based on the correspondence and data provided, it appears that your case meets the closure requirements in ch. NR 726, Wisconsin Administrative Code. The Department considers this case closed and no further investigation or remediation is required at this time, however, you and future property owners must comply with certain continuing obligations as explained in this letter.

GIS Registry

This site will be listed on the Remediation and Redevelopment Program's GIS Registry. The specific reasons are summarized below:

- Residual soil contamination exists that must be properly managed should it be excavated or removed
- Pavement, an engineered cover or a soil barrier must be maintained over contaminated soil and the state must approve any changes to this barrier
- Groundwater contamination is present above Chapter NR 140 enforcement standards

This letter and information that was submitted with your closure request application will be included on the GIS Registry. To review the sites on the GIS Registry web page, visit the RR Sites Map page at http://dnr.wi.gov/org/aw/rr/gis/index.htm. If the property is listed on the GIS Registry because of remaining contamination and you intend to construct or reconstruct a well, you will need prior Department approval in accordance with s. NR 812.09(4)(w), Wis. Adm. Code. To obtain approval,

Form 3300-254 needs to be completed and submitted to the DNR Drinking and Groundwater program's regional water supply specialist. This form can be obtained on-line http://dnr.wi.gov/org/water/dwg/3300254.pdf or at the web address listed above for the GIS Registry.

Closure Conditions

Please be aware that pursuant to s. 292.12 Wisconsin Statutes, compliance with the requirements of this letter is a responsibility to which the current property owner and any subsequent property owners must adhere. You must pass on the information about these continuing obligations to the next property owner or owners. If these requirements are not followed or if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety, welfare, or the environment, the Department may take enforcement action under s. 292.11 Wisconsin Statutes to ensure compliance with the specified requirements, limitations or other conditions related to the property or this case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code. The Department intends to conduct inspections in the future to ensure that the property is in compliance with the conditions included in this letter.

Cover or Barrier

Pursuant to s. 292.12(2)(a), Wis. Stats., the pavement or other impervious cap that currently exists in the location shown on the attached map shall be maintained in compliance with the **attached maintenance plan** in order to minimize the infiltration of water and prevent additional groundwater contamination that would violate the groundwater quality standards in ch. NR 140, Wis. Adm. Code, and to prevent direct contact with residual soil contamination that might otherwise pose a threat to human health. If soil in the specific locations described above is excavated in the future, the property owner at the time of excavation must sample and analyze the excavated soil to determine if residual contamination remains. If sampling confirms that contamination is present the property owner at the time of excavation will need to determine whether the material is considered solid or hazardous waste and ensure that any storage, treatment or disposal is in compliance with applicable statutes and rules. In addition, all current and future owners and occupants of the property need to be aware that excavation of the contaminated soil may pose an inhalation or other direct contact hazard and as a result special precautions may need to be taken during excavation activities to prevent a health threat to humans.

The attached maintenance plan and inspection log are to be kept up-to-date and on-site. Please submit the inspection log to the Department only upon request.

Prohibited Activities

The following activities are prohibited on any portion of the property where [pavement, a building foundation, soil cover, engineered cap or other barrier] is required as shown on the attached map, unless prior written approval has been obtained from the Wisconsin Department of Natural Resources: 1) removal of the existing barrier; 2) replacement with another barrier; 3) excavating or grading of the land surface; 4) filling on capped or paved areas; 5) plowing for agricultural cultivation; 6) construction or placement of a building or other structure.

Residual Groundwater Contamination

Groundwater impacted by benzene contamination greater than enforcement standards set forth in ch. NR140, Wis. Adm. Code, is present the property. For more detailed information regarding the locations where groundwater samples have been collected (i.e., monitoring well locations) and the associated

contaminant concentrations, refer to the Remediation and Redevelopment Program's GIS Registry at the RR Sites Map page at http://dnr.wi.gov/org/aw/rr/gis/index.htm.

Dewatering Permits

The Department's Watershed Management Program regulates point source discharges of contaminated water, including discharges to surface waters, storm sewers, pits or to the ground surface. This includes discharges from construction related dewatering activities, including utility and building construction.

Based on the concentrations of contaminants remaining in groundwater at this location, it appears likely that dewatering activities would require a permit from the Watershed Management Program. If you or any other person plan to conduct such activities, you or that person must contact that program, and if necessary, apply for the necessary discharge permit. Additional information regarding discharge permits is available at http://www.dnr.state.wi.us/org/water/wm/ww/

The Department appreciates your efforts to restore the environment at this site. If you have any questions regarding this closure decision or anything outlined in this letter, please contact Tom Sturm at 715-526-4230.

Sincerely,

Bruce G. Urben Team Supervisor
Northeast Region Remediation & Redevelopment Program

Seymour, WI 54165

Subject: Coonen Oil Station, 1043 Ivory St., Seymour, Wisconsin
WDNR BRRTS # 03-45-213120

Dear Mr. Coonen:

On May 16, 2005, I sent you a letter indicating that the Department had conditionally closed the above case and that final closure would be granted when certain conditions are met. Please note that the following conditions have still not been satisfied and we are unable to close the case.

1. The monitoring wells at the site must be properly abandoned in compliance with ch. NR 141, Wis. Adm. Code. Documentation of well abandonment must be submitted to me on Form 3300-5B found at www.dnr.state.wi.us/org/water/dwg/gw/ or provided by the Department of Natural Resources.

2. Any remaining purge water, waste and/or soil piles generated as part of site investigation or remediation activities must be removed from the site and disposed of or treated in accordance with Department of Natural Resources' rules. Please send a letter advising me that any remaining purge water, waste and/or soil piles have been removed once that work is completed.

3. As a condition of this closure, the impermeable cover (pavement and buildings) that presently exist on the site must be maintained to minimize direct contact concerns and/or for groundwater protection. The cover is to be maintained in accordance with a plan prepared and submitted to the Department of Natural Resources pursuant to s. NR 724.13(2), Wis. Adm. Code and will be included on the GIS registry. Your consultant will need to prepare and submit this maintenance plan to me. Please note, due to a statutory change, the deed restriction referenced in the May 16. 2005 letter is no longer required.

After I receive the requested information, I will issue a final closure letter for the site. We appreciate your efforts to restore the environment at this site. If you have any questions regarding this letter, please contact me at 715-526-4230.

Sincerely,

Tom Sturm

May 16, 2005

Mr. Leon Westerfeld
Westerfeld Oil Co.
PO Box 85
Cecil, WI 54111-0085

Subject: Seymour Mobil, 310 E. State Highway 54/55, Seymour, WI ; DNR # 03-45-153996, Commerce # 54165-1904-10

Dear Mr. Westerfeld:

On April 25, 2005, the Department granted conditional closure for the Coonen Oil Station, DNR # 03-45-213120, directly north and across Highway 54/55 from the Seymour Mobil. The review determined that, while contamination remains on site from the Coonen Station, contamination at MW-300 on the Coonen property is likely migrating from the Seymour Mobil.

The Department is requesting that Westerfeld Oil Company take over responsibility of monitoring well MW-300 at Coonen for the purpose of additional monitoring related to the cleanup of the Seymour Mobil Site. Monitoring results from this well, in conjunction with the results from the existing Seymour Mobil site wells will be used to assist in the review at the time closure is requested. This well should be sampled in conjunction with the current monitoring schedule for the existing wells at Seymour Mobil. If closure is approved you will also be responsible for abandoning this well.

Please inform me in writing within 14 days of this letter indicating you will take over responsibility for MW-300 on the Coonen site. If you do not intend to accept the transfer of this well, or if I do not hear from you at that time, the well will be abandoned along with the other Coonen Site wells. However, please be aware that the Department may require additional monitoring points for the Seymour Mobil if there is insufficient information to allow for a decision to be made at the time closure is requested.

Please contact me at 715-526-4230 if you need more information.

Sincerely,

Tom Sturm

May 16, 2005

Mr. Robert Coonen
Coonen Inc.
1043 Ivory St.
Seymour, WI 54165

Subject: Conditional Closure Decision with Requirements to Achieve Final Closure
Coonen Oil Station, 1043 Ivory St., Seymour, Wisconsin
WDNR BRRTS # 03-45-213120

Dear Mr. Coonen:

On April 25, 2005, the Northeast Region Closure Committee reviewed your request for closure of the case described above. The Committee reviews environmental remediation cases for compliance with state rules and statutes to maintain consistency in the closure of these cases. After careful review of the closure request, the Closure Committee has determined that the petroleum contamination on the site from the Coonen Oil Station appears to have been investigated and remediated to the extent practicable under site conditions. Your case has been remediated to Department standards in accordance with s. NR 726.05, Wis. Adm. Code and will be closed if the following conditions are satisfied:

MONITORING WELL ABANDONMENT

The monitoring wells at the site must be properly abandoned in compliance with ch. NR 141, Wis. Adm. Code. Documentation of well abandonment must be submitted to me on Form 3300-5B found at www.dnr.state.wi.us/org/water/dwg/gw/ or provided by the Department of Natural Resources.

Note: The Department is requesting that MW-300 remain for groundwater monitoring for the cleanup at the Seymour Mobil. You should delay abandonment of the other wells until I receive notification from the RP for Seymour Mobil that they will be accepting the responsibility for this well. If responsibility is transferred, you will need to grant access to your property for sampling and abandonment of this well.

PURGE WATER, WASTE AND SOIL PILE REMOVAL

Any remaining purge water, waste and/or soil piles generated as part of site investigation or

remediation activities must be removed from the site and disposed of or treated in accordance with Department of Natural Resources' rules. Please send a letter advising me that any remaining purge water, waste and/or soil piles have been removed once that work is completed.

DEED RESTRICTION FOR CONTAMINATED SOIL

To close this site, the Department requires that a deed restriction be signed and recorded to address the issue of the remaining soil contamination associated with the site. The purpose of the restriction is to maintain a surface barrier over the remaining soil contamination to:

(A) prevent contamination from impacting human health through direct contact.

(B) prevent contamination from impacting groundwater due to the infiltration of precipitation. (See Option 3 in the model deed restriction in the appendix of PUB-RR-606, "Guidance on Case Close Out and the Requirements for Institutional Controls and VPLE Environmental Insurance.")

You will need to submit a draft deed restriction to me (electronically via email preferred) before the document is signed and recorded. You may find a model deed restriction enclosed for your use or you can visit our web site at www.dnr.state.wi.us/org/aw/rr or go directly to http://dnr.wi.gov/org/aw/rr/archives/pubs/RR606.pdf to find an electronic copy of PUB-RAR_606, which includes a model deed restriction. If there is a deed more recent than the one I have that was filed 4/28/05, please submit that to me as well to assist us in our review of the deed restriction. After the Department of Natural Resources has reviewed the draft document for completeness, you should sign it if you own the property, or have the appropriate property owner sign it, and have it recorded by the Waupaca County Register of Deeds. Then you must submit a copy of the recorded document, with the recording information stamped on it, to me. Please be aware that if a deed restriction is recorded for the wrong property because of an inaccurate legal description or parcel identification number that you have provided, you will be responsible for recording corrected documents at the Register of Deeds Office to correct the problem.

MAINTENANCE PLAN

As a condition of this closure, the impermeable cover (pavement and buildings) that presently exist on the site must be maintained to minimize direct contact concerns and/or for groundwater protection. The cover is to be maintained in accordance with a plan prepared and submitted to the Department of Natural Resources pursuant to s. NR 724.13(2), Wis. Adm. Code. Please submit a draft maintenance plan to me with the draft deed restriction. The maintence plan will be attached to the restriction.

EXCAVATION OF CONTAMINATED SOIL

Residual soil contamination remains at B-1 as indicated in the information submitted to the Department of Natural Resources. If soil in this location is excavated in the future, the property owner at that time will be required to sample and analyze the excavated soil in order to determine whether the contamination still remains. The owner will also have to properly store, treat, or dispose of any excavated materials, based upon the results of that characterization, and take special precautions during excavation activities to prevent a direct contact threat to humans. All future owners and occupants of this property need to be aware that excavation of the contaminated soil may pose an inhalation or other direct contact hazard at the time of excavation.

Mr. Leon Westerfeld
Westerfeld Oil Co.
PO Box 85
Cecil, WI 54111-0085

Subject: Seymour Mobil, 310 E. State Highway 54/55, Seymour, WI ; DNR # 03-45-153996, Commerce # 54165-1904-10

Dear Mr. Westerfeld:

On April 25, 2005, the Department granted conditional closure for the Coonen Oil Station, DNR # 03-45-213120, directly north and across Highway 54/55 from the Seymour Mobil. The review determined that, while contamination remains on site from the Coonen Station, contamination at MW-300 on the Coonen property is likely migrating from the Seymour Mobil.

The Department is requesting that Westerfeld Oil Company take over responsibility of monitoring well MW-300 at Coonen for the purpose of additional monitoring related to the cleanup of the Seymour Mobil Site. Monitoring results from this well, in conjunction with the results from the existing Seymour Mobil site wells will be used to assist in the review at the time closure is requested. This well should be sampled in conjunction with the current monitoring schedule for the existing wells at Seymour Mobil. If closure is approved you will also be responsible for abandoning this well.

Please inform me in writing within 14 days of this letter indicating you will take over responsibility for MW-300 on the Coonen site. If you do not intend to accept the transfer of this well, or if I do not hear from you at that time, the well will be abandoned along with the other Coonen Site wells. However, please be aware that the Department may require additional monitoring points for the Seymour Mobil if there is insufficient information to allow for a decision to be made at the time closure is requested.

Please contact me at 715-526-4230 if you need more information.

Sincerely,

Tom Sturm
Hydrogeologist
Remediation & Redevelopment Program

Subject: Status Update Request for Coonen Oil Company, Seymour, WI
WDNR BRRTS # 03-45-213120

Dear Mr. Coonen:

I am writing to request an update on the status of the above referenced property. On November 7, 2001 the Department received a Project Status Update from Mark Foht of Northern Environmental for the above referenced site. Since November 2001 the Department has not received any correspondence on this case.

Please provide the Department with a letter or report documenting the most recent site investigation/remediation activities taking place at the above referenced site. **Within 14 days of receipt of this letter, please respond in writing to the Department.** Failure to provide an adequate response may result in a recommendation for enforcement action.

I anticipate your cooperation and thank you for your timely response in this matter. If you have any questions or comments, please feel free to contact me at 920-303-5435.

Sincerely,

Cheryl Laatsch

SUBJECT: Request for Case Status Update
Coonen Oil Company, 1043 Ivory Street, Seymour
WDNR BRRTS #: 03-45-213120

Dear Mr. Coonen:

I am writing to request an update on the status of the above referenced leaking underground storage tank case. On November 7, 2001, the Department received the Project Status Update by Mark Foht of Northern Environmental and submitted on behalf of the above referenced site. Since this time the Department has not received any correspondence on this case.

Please provide the Department with a letter or report documenting the most recent site investigation/remediation activities taking place at the above referenced site. **Within 14 days of receipt of this letter,** please respond in writing to the Department. Failure to provide an adequate response may result in a recommendation for enforcement action.

I anticipate your cooperation and thank you for your timely response in this matter. If you have any questions or comments, please feel free to contact me in Oshkosh at 920-303-5435.

Sincerely,

Cheryl Laatsch

August 31, 2000

Mr. John Dunbar
1020 S. Main St.
Seymour, WI 54165

Subject: Closure Approval, with Restrictions for former Dunbar Service Station, 1020 S. Main St., Seymour, WI; WDNR # 03-45-000013.

Dear Mr. Dunbar:

The Department's Case Closeout Committee in the Northeast Region has completed a review of the above-referenced petroleum contamination case and has approved it for closure. Your case closure letter has the following two significant parts:

1. General case closure criteria.
2. Groundwater Use Deed Restriction

Please read this entire letter. It addresses each of these topics with subtitled indented paragraphs.

1. General Case Closure

The case closure panel reviews environmental remediation cases for compliance with state laws, standards, and guidelines to maintain consistency in the closeout of cases. At the present time, it appears that actions have been taken to the extent practicable to restore the environment and minimize the harmful effects from this discharge to the air, lands and waters of this state. Please be aware that this letter does not absolve the current or any future owner of this property from future decisions regarding this site or impacts which may be discovered and/or traced back to past or future activities at this site. If additional information in the future indicates that further investigation or cleanup is warranted, the Department will require that appropriate action be taken at that time.

2. Deed Notice of Remaining On-site Groundwater Contamination.

Groundwater contamination in excess of NR140 Enforcement Standards for benzene remains at the site. However monitoring data indicates that natural attenuation will remediate the remaining contamination in a reasonable period of time. As a condition of closure, the Department is requiring that a groundwater use restriction be placed on the property deed indicating this condition and special requirements that will be necessary to construct a well on the property.

Please send me a copy of the current property deed as filed with the Outagamie County Register of Deeds. The deed must have a detailed property description and the name of the current property owner. A certified survey map if available, should also be included. The Department will prepare the groundwater use restriction based on this information and return it to the appropriate person for

filing at the register of deed office. Please note that the current property owner or an authorized representative must sign the notice.

The Department appreciates the actions you have undertaken to restore the environment at this site. This case will appear as closed on the Department's case tracking system after our receipt of 1) the monitoring well abandonment forms (Form 3300-05B) for all monitoring wells related to this case and 2) documentation that the deed document has been filed at the register of deeds office.

If you have questions regarding this letter, you may contact me at (715) 526-4230.

Sincerely,

Tom Sturm

February 22, 1999

Coonen Oil Company
Attn: Mark Coonen
1043 Ivory Street
Seymour, WI 54165

SUBJECT: Petroleum Contamination from Underground Storage Tank System
Coonen Oil Company, 1043 Ivory Street, Seymour
WDNR LUST ID #03-45-213120

Dear Mr. Coonen:

On January 21, 1999, the Department of Natural Resources (DNR) received notification from William Vachon of Robert E. Lee & Associates that petroleum contamination was discovered on December 15, 1998, while performing a tank closure assessment at the above referenced site.

Based on the information received by the DNR, we believe that Coonen Oil is responsible for restoring the environment at this site under Section 292.11, Wisconsin Statutes (hazardous substances spills law). This responsibility includes first investigating the extent of the contamination, then selecting and implementing the most appropriate remedial action. Enclosed is information to help you understand what you need to do to ensure your compliance with the spills law.

The purpose of this letter is threefold: (1) to describe your legal responsibilities; (2) to explain what you need to do to investigate and clean up the contamination; and (3) to provide you with information about cleanups, environmental consultants, and working cooperatively with the DNR.

Legal Responsibilities:

Your legal responsibilities are defined both in statute and administrative code. The hazardous substances spill law, Section 292.11(3) Wisconsin Statutes, states:

> RESPONSIBILITY. A person who possesses or controls a hazardous substance which is discharged or who causes the discharge of a hazardous substance shall take the actions necessary to restore the environment to the extent practicable and minimize the harmful effects from the discharge to the air, lands, or waters of the state.

Wisconsin Administrative Codes NR 700 through NR 728 establish requirements for emergency and interim actions, public information, site investigations, design and operation of remedial action systems, and case closure. Chapter NR 708 includes provisions for immediate actions in response to limited contamination. Wisconsin Administrative Code NR 140 establishes groundwater standards for contaminants that reach groundwater.

Steps to Take

The longer contamination is left in the environment, the farther it can spread and the more it may cost to clean up. Quick action may lessen damage to your property and to neighboring properties and reduce your costs in investigating and cleaning up the contamination. To ensure that your cleanup complies with Wisconsin's laws and administrative codes, you should hire a professional environmental consultant who understands what needs to be done. These are the first four steps to take:

1. **By March 30, 1999,** please submit written verification (such as a letter from the consultant) that you have hired an environmental consultant (we would like a contact name, mailing address and phone number). If you cannot meet this timeline, please send a request for an extension, in writing, to the name listed at the bottom of this page, indicating the reason why the timeline cannot be met and when you expect to be able to meet this requirement.

2. **By April 30, 1999,** your consultant must submit a workplan and a schedule for conducting the investigation. The consultant must follow the Department's administrative codes and our technical guidance documents. Please include with the workplan a copy of any previous information that has been completed for your site (such as an underground tank removal report or a preliminary soil excavation report).

3. Please keep us informed of what is being done at your site. You or your consultant must provide us with a brief report at least every 90 days starting after your workplan is submitted. These quarterly reports should summarize the work completed since the last report. Quarterly reports need only include one or two pages of text, plus any relevant maps and tables. Should conditions at your site warrant, you may receive a letter requiring more frequent contacts with the Department.

4. When the site investigation is complete, your consultant must submit a full report on the extent and degree of soil and groundwater contamination and a proposal for cleaning up the contamination.

Due to the number of contaminated sites and our staffing levels, we will be unable to respond to each report. To maintain your compliance with the spills law and chapters NR 700 through NR 728, do not delay the investigation and cleanup by waiting for DNR responses. We have provided detailed technical guidance to environmental consultants. Your consultant is expected to be familiar with our technical procedures and administrative codes and should be able to answer your questions on meeting Wisconsin's cleanup requirements.

Any questions regarding this site should be directed to the following DNR staff person; all correspondence and reports should be sent to the Department at the address below:

Wisconsin Department of Natural Resources
Attn: Jennifer Tobias (920-424-7887)
Box 2565
Oshkosh, WI 54903

If the contamination doesn't include groundwater, the responsibility for governmental oversight of this site will be transferred to the Wisconsin Department of Commerce in accordance with Wisconsin Act 27.

Unless otherwise requested, **please send only one duplexed copy of all plans and reports.** Correspondence and reports should be identified with the assigned WDNR ID number and name of the site, which can be found on the first page of this letter.

Information for Site Owners:

Enclosed is a list of environmental consultants and some important tips on selecting a consultant. If you are eligible for reimbursement of costs under Wisconsin's PECFA program (see last paragraph), you will need to compare at least three consultants' proposals before hiring a consultant. Consultants and laboratories working in the PECFA program are required to carry errors and omissions insurance to help protect you against unsuitable work. Also enclosed are materials on controlling costs, understanding the cleanup process, and choosing a site cleanup method. This information has been prepared to help you understand your responsibilities and what your environmental consultant needs to do. Please read this information carefully.

Financial Information:

Reimbursement from the Petroleum Environmental Cleanup Fund (PECFA) is available for the costs of cleaning up contamination from eligible petroleum storage tanks. The Wisconsin Department of Commerce (DCOM) administers the fund. Please contact DCOM at (608) 266-2424 for more information on eligibility and regulations for this program.

Thank you for your cooperation.

Sincerely,

Janis DeBrock

RE: Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Dear Mark Gretebeck:

Enclosed are the analytical results for sample(s) received by the laboratory on October 01, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-01 (8-10.5) **Lab ID: 40234318001** Collected: 09/29/21 10:30 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-02 (6-8) **Lab ID: 40234318002** Collected: 09/29/21 12:00 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-04 (2-4) **Lab ID: 40234318004** Collected: 09/29/21 13:15 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-04 (6-7) **Lab ID: 40234318005** Collected: 09/29/21 13:30 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-06 (2-3) **Lab ID: 40234318008** Collected: 09/29/21 14:35 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-06 (4-6) **Lab ID: 40234318009** Collected: 09/29/21 14:45 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-07 (2-3) **Lab ID: 40234318010** Collected: 09/29/21 15:05 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-08 (2-3) **Lab ID: 40234318011** Collected: 09/29/21 16:00 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-10 (2-4) **Lab ID: 40234318013** Collected: 09/30/21 08:10 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-10 (6-7.5) **Lab ID: 40234318014** Collected: 09/30/21 08:15 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-12 (6-8) **Lab ID: 40234318017** Collected: 09/30/21 09:15 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-13 (6-7.5) **Lab ID: 40234318018** Collected: 09/30/21 09:30 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

Sample: SB-14 (6-7) **Lab ID: 40234318019** Collected: 09/30/21 09:45 Received: 10/01/21 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	LOQ	LOD	DF	Prepared	Analyzed	CAS No.	Qual

QUALIFIERS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234318

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1q	Analyte was detected in the associated method blank. Sample was re-analyzed with a second method blank that was non-detect. Due to limitations of the LIMS system, only initial method blank results are reported.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
DC	Chromatographic pattern inconsistent with typical Diesel Fuel.
G+	Late peaks present outside the GRO window.
G-	Early peaks present outside the GRO window.
GO	Early and late peaks present outside the GRO window.
R1	RPD value was outside control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

RE: Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234317

Dear Mark Gretebeck:

Enclosed are the analytical results for sample(s) received by the laboratory on October 01, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

QUALIFIERS

Project: J210618 STH 54 SEYMOUR
Pace Project No.: 40234317

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
DC	Chromatographic pattern inconsistent with typical Diesel Fuel.
GO	Early and late peaks present outside the GRO window.

Phase 2.5 Work Plan

PROJECT BACKGROUND

Wisconsin Department of Transportation (DOT) is proposing to install two roundabouts at the intersections of STH 54/STH55 and STH 54/CTH C in the City of Seymour.

Bay West will complete this Phase 2.5 in accordance with the Facilities Development Manual (FDM) Section 21-35-12. The purpose of this Phase 2.5 Investigation is to identify potential soil and groundwater contamination at sites within the project corridor Right of Way (ROW) with known historical contamination located off DOT property. Two sites in the project corridor were identified to have potential contamination in Phase I reporting; SIte 5, which is an active/operating Mobil station in the southwest quadrant of the intersection and Site 6, whihc is an inactive/closed Shell station in the northwest quadrant were identified as having petroleum impacts in the ROW during Site Reconniassance. Bay West will install up to 14 soil borings and/or temporary monitoring wells at these sites. Soil borings will be screened every 2.5' using a photo-ionization detector (PID). Up to two soil samples will be collected from each boring. Samples will be collected from the highest PID readings or areas of observed contamination. Historically, groundwater has been encountered at 6-8 feet below ground surface (bgs) at both sites. Bay West will advance the soil borings two feet into the water table in accordance with the FDM. Soil samples will be submitted to Pace Analytical for analysis as detailed below in the Work Plan. Proposed soil borings are illustrated on **Figure 1**. Bay West will install up to 10 temporary monitoring wells to intersect the water table. Groundwater samples will be collected from each temporary monitoring well, submitted to Pace Analytical for analysis as detailed below in the Work Plan. Proposed temporary monitoring well locations are illustrated on **Figure 1**. Rationale for soil boring locations, temporary monitoring well locations, and corresponding sample analysis are also detailed in the Work Plan below.

TIMELINE

Drilling is anticipated to start on September 29th and the work is expected to take 2 days to complete (September 29th through September 30th). Soil borings at Site 5 (SB-1 through SB-7 and TW-1 through TW-5) will be completed first on September 29th followed by soil borings at Site 6 (SB-8 through SB-14 and TW-6 through TW-10) on September 30th. Samples collected during the Phase 2.5 will be analyzed on a standard 10 business day turnaround time. Bay West will provide analytical results to WISDOT upon receipt and will submit the Phase 2.5 Report no later than November 30, 2021, in accordance with the approved Scope of Work, dated July 14, 2021.

Number of Duplicate Samples													

Notes:

1 - Soil borings will be field screened every 2 1/2 ft and will be advanced at least 2 feet into groundwater. Proposed depths based on available historic groundwater information.

2 - Generally, two soil samples will be collected from each boring; however, more than two samples can be collected from a single boring depending on observed contamination, fill, and stratigraphy. Soil samples will be collected using the following rationale:

· The interval within a stratigraphic layer with the highest PID reading >10 ppm. Note that if multiple stratigraphies are encountered, soil samples from each stratigraphy could be collected from areas with PID readings >10 ppm.
· Obvious discoloration, odor, debris (e.g., potential fill soil) or other visible signs of contamination.
· If no obvious signs of contamination are evident, one sample will be collected from 2 feet directly below the water table or from the bottom of the boring, and one sample will be collected within the typical subsurface soil disturbance zone (2-4ft bgs).

3 - Drilling soil cuttings will be drummed as investigation derived waste and 1 soil sample will be collected from the soil cuttings and analyzed for TCLP RCRA metals TCLP VOCs, and TCLP SVOCs.

1. Health and Safety Requirements for Workers Remediating Petroleum Contamination.

Add the following to standard spec 107.1(2):

Soil contamination with gasoline, diesel fuel, fuel oil, or other petroleum related products may be encountered during excavation activities. Prepare a site-specific Health and Safety Plan complying with the Occupational Safety and Health Administration (OSHA) standard for Hazardous Waste Operation and Emergency Response (HAZWOPER), 29 CFR 1910.120.

All site workers taking part in remediation activities or who will have the reasonable probability of exposure of safety or health hazards associated with the hazardous material shall have completed Health and Safety training that meets OSHA requirements. Before the start of remediation work, submit to the engineer a site-specific Health and Safety Plan, and written verification that workers will have completed up-to-date OSHA training.

Develop, delineate, and enforce the health and safety exclusions zones for each contaminated site location pursuant to 29 CFR 1910.120.

stp-107-115 (20150630)

2. Excavation, Hauling, and Disposal of Petroleum Contaminated Soil, Item 205.0501.S.

A Description

A.1 General

Soil

This special provision describes excavating, loading, hauling, and disposing of petroleum contaminated soil at a DNR approved bioremediation facility.

Perform this work conforming to standard spec 205 and Chapters NR 700-754 of the Wisconsin Administrative Code, as supplemented herein. Per NR 718.07, a solid waste collection and transportation service-operating license is required under NR 502.06 for each vehicle used to transport contaminated soil.

Groundwater

This special provision also describes pumping and disposing of contaminated groundwater (if dewatering is necessary).

Perform this work according to standard spec 205 and with pertinent parts of Chapters NR 100-299 of the Wisconsin Administrative Code, as supplemented herein. Perform all work necessary to control, handle, and dispose of groundwater and surface water, and all other water that may be encountered within contaminated areas, as required for performance of the work.

A.2 Notice to the Contractor – Contaminated Soil Locations

The department completed testing for soil and groundwater contamination for locations within this project where excavation is required. Testing indicated that petroleum-contaminated soil is present at the following locations the plans show:

1. Station 1192+00 to 1193+00 from 75 feet LT of centerline to 50 feet RT of centerline (Intersection of STH 54 and Ivory Street). Soil is contaminated from 2 to 8 feet below grade and occupies an approximate 15 by 25 square yard area. Approximately 375 cubic yards of impacted soil remain on site. Petroleum impacted groundwater was encountered within this location. Approximately __ cubic yards of contaminated soil is anticipated to be encountered during construction activities within this location.

If contaminated soils are encountered elsewhere on the project, terminate excavation activities in the area and notify the engineer.

For further information regarding previous investigation and remediation activities at these sites contact:

Name: Lisa Lumley
Address: Wisconsin Department of Transportation – Northeast Region
944 Vanderperren Way, Green Bay, WI 54304
Phone: (920) 492-5659 and (920) 360-6684
E-mail: lisa.lumley@dot.wi.gov

A.3 Coordination

Coordinate work under this contract with the environment consultant:

Consultant: Bay West LLC
Address: 5 Empire Drive, St. Paul, MN 55103
Contact: Paul Raymaker
Phone: 651-291-3411
Fax: N/A
E-mail: praymaker@baywest.com

The role of the environmental consultant will be limited to:

1. Determining the location and limits of contaminated soil to be excavated based on soil analytical results from previous investigations, visual observations, and field screening of soil that is excavated;
2. Identifying contaminated soils to be hauled to the bioremediation facility;
3. Documenting that activities associated with management of contaminated soil are in conformance with the contaminated soil management methods for this project as specified herein; and
4. Obtaining the necessary approvals for disposal of contaminated soil from the bioremediation facility.
5. Identifying contaminated groundwater to be pumped for treatment and disposal (if dewatering is necessary). Coordinating groundwater characterization and approval for disposal of contaminated water with the City of Seymour.

Provide at least a 14-calendar day notice of the preconstruction conference date to the environmental consultant. At the preconstruction conference, provide a schedule for all excavation activities in the areas of contamination to the environmental consultant. Also notify the environmental consultant at least three calendar days before beginning excavation activities in each of the contaminated areas.

Coordinate with the environmental consultant to ensure that the environmental consultant is present during excavation activities in the contaminated areas. Perform excavation work in each of the contaminated areas on a continuous basis until excavation work is completed.

Identify the DNR approved bioremediation facility that will be used for disposal of contaminated soils and provide this information to the environmental consultant no later than 30 calendar days before beginning excavation activities in the contaminated areas or at the preconstruction conference, whichever comes first. The environmental consultant will be responsible for obtaining the necessary approvals for disposal of contaminated soils from the bioremediation facility. Do not transport contaminated soil offsite without prior approval from the environmental consultant.

A.4 Health and Safety Requirements

Add the following to standard spec 107.1:

During excavation activities, expect to encounter soil contaminated with gasoline, diesel fuel, fuel oil, or other petroleum related products. Site workers taking part in activities that will result in the reasonable probability of exposure to safety and health hazards associated with hazardous materials shall have completed health and safety training that meets the Occupational Safety and Health Administration (OSHA) requirements for Hazardous Waste Operations and Emergency Response (HAZWOPER), as provided in 29 CFR 1910.120.

Prepare a site-specific Health and Safety Plan, and develop, delineate and enforce the health and safety exclusion zones for each contaminated site location as required by 29 CFR 1910.120. Submit the site-specific health and safety plan and written documentation of up-to-date OSHA training to the engineer before the start of work.

B (Vacant)

C Construction

Add the following to standard spec 205.3:

Soil

Control operations in the contaminated areas to minimize the quantity of contaminated soil excavated.

The environmental consultant will periodically evaluate soil excavated from the contaminated areas to determine if the soil will require offsite bioremediation. The environmental consultant will evaluate excavated soil based on field screening results, visual observations, and soil analytical results from previous environmental investigations. Assist the environmental consultant in collecting soil samples for

evaluation using excavation equipment. The sampling frequency shall be a maximum of one sample for every 20 cubic yards excavated.

On the basis of the results of such field-screening, the material will be designated as follows:

- Excavation Common – Consisting of clean soil and/or clean construction and demolition fill (such as clean soil, boulders, concrete, reinforced concrete, bituminous pavement, bricks, building stone, and unpainted or untreated wood), which under NR 500.08 are exempt materials, or
- Low-Level Contaminated Material – PID readings less then 10 ppm and no observation of staining or petroleum odor for reuse as fill within the construction limits if covered with pavement, or
- Contaminated Soil – Significant petroleum odor, staining, and/or PID readings greater than 10 ppm) for off-site treatment and disposal at the WDNR-licensed bioremediation facility, or
- Contaminated Industrial Fill – Soil for reuse as fill within the construction limits if covered by pavement or 6-inchess of clean topsoil, or off-site treatment and disposal at the WDNR-licensed bioremediation facility, or
- Potentially contaminated material for temporary stockpiling and additional characterization prior to disposal.

Directly load and haul soils designated by the environmental consultant for offsite bioremediation to the DNR approved bioremediation facility. Use loading and hauling practices that are appropriate to prevent any spills or releases of petroleum-contaminated soils or residues. Before transport, sufficiently dewater soils designated for off-site bioremediation so as not to contain free liquids.

Some material may require additional characterization prior to disposal. Provide for the temporary stockpiling of up to 250 cubic yards of contaminated soil on-site that require additional characterization. Construct and maintain a temporary stockpile of the material according to NR 718.05(3), including, but not limited to, placement of the contaminated soil/fill material on an impervious surface and covering the stockpile with impervious material to prevent infiltration of precipitation. The environmental consultant will collect representative samples of the stockpiled material, laboratory-analyze the samples, and advise the contractor, within 12 business days of the construction of the stockpile, of disposal requirements. The stockpiled material shall be disposed either at the WDNR-licensed disposal facility by the contractor or, if characterized as hazardous waste, by the department. As an alternative to temporarily stockpiling contaminated soil/fill material that requires additional characterization, the contractor has the option to suspend excavation in those areas, as stated above.

When material is encountered outside the above-identified limits of known contamination that appears to have been impacted with petroleum or chemical products, or when other obvious potentially contaminated materials are encountered or material exhibits characteristics of industrial-type wastes, such as fly ash, foundry sand, and cinders, or when underground storage tanks are encountered, suspend excavation in that area and notify the engineer.

Groundwater

Groundwater may be present within the construction limits. Water generated during dewatering operations (if necessary) is expected to be permitted to discharge to the surface except in the contaminated areas. Contaminated water encountered, but not requiring removal as a standard course of construction, shall remain in-place and not be managed under this special provision.

Contaminated groundwater generated from dewatering activities within the contaminated areas may exceed the surface water discharge limits for PVOCs specified in the DNR's "General Permit to Discharge under the Wisconsin Pollutant Discharge Elimination System" for "Contaminated Groundwater from Remedial Action Operations" (WPDES Permit No. WI-0046566-5), Table 3.1.

Contaminated water generated during dewatering may be discharged into the sanitary sewer for disposal/treatment at the city wastewater treatment facility provided the following conditions are met:

- Notify John Schoen, Director of Public Works at (jschoen@seymourutil.com or 920-851-0121), prior to discharge of contaminated groundwater to the sanitary sewer. Do not discharge into the sanitary sewer without prior approval from the City of Seymour Department of Public Works.
- Discharge location(s) shall be discussed and approved by the City of Seymour Public Water Works. The City of Seymour manger or agent thereof can order a stop to discharges if the discharge is causing treatment problems at the wastewater treatment plant or in the collection system.

- Any discharge shall meet all conditions of the most current City of Seymour Department of Public Works.
- Do not discharge grit (such as sand, sediment, detritus, etc.) to the sanitary sewer during dewatering operations. Furnish, install, and maintain a sediment control device (e.g., box, bag) for use prior to discharging water.
- Do not discharge any petroleum free product to the sanitary sewer under any circumstances.
- Document compliance with the City of Seymour Sewage Treatment Plant discharge requirements, including water quality sampling and analysis.
- The City of Seymour Department of Public Works may impose a sanitary sewer use fee and flow restrictions.
- All water may be trucked to the wastewater treatment plant in lieu of discharge to the sanitary sewer at the contractor's option and at the contractor's cost.

Notify the environmental consultant prior to pumping contaminated groundwater.

Discharging contaminated groundwater to any location other than that approved and provided by the environmental consultant, is at the contractor's cost. If the contractor chooses alternate discharge, at the contractor's cost, obtain DNR concurrence on any dewatering plans, and provide and operate any and all treatment and discharge equipment required.

Employ construction methods and techniques in a manner that will minimize the need for dewatering, and if dewatering is required, minimize the volume of water generated. Take measures to limit groundwater, surface water, and precipitation from entering and exiting excavations in the areas of contamination. Such measures, which may include berming, ditching, or other means, shall be maintained until construction of utilities in the areas of contamination are complete.

Ensure continuous dewatering and excavation safety at all times. Provide, operate, and maintain adequate pumping equipment and drainage and disposal facilities. Notify the engineer of any dewatering activities, and obtain any permits necessary to discharge water. Provide copies of such permits to the engineer. Meet any requirements and pay any costs for obtaining and complying with such permit use. Follow all applicable legislative statues, judiciary decisions, and regulations of the State of Wisconsin.

D Measurement

The department will measure Excavation, Hauling, and Disposal of Petroleum Contaminated Soil in tons of contaminated soil, accepted by the bioremediation facility as documented by weight tickets generated by the bioremediation facility.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
205.0501.S	Excavation, Hauling, and Disposal of Petroleum Contaminated Soil	TON

Payment is full compensation for excavating, segregating, loading, hauling, and treatment via bioremediation of contaminated soil; obtaining solid waste collection and transportation service operating licenses; assisting in the collection soil samples for field evaluation; and dewatering of soils before transport, if necessary.
