Subject: WI SPILL #18368 ID 20221025NE05-1 - UNKNOWN - Dairyland Farms Spill
Attachments: DF_Aerial Map 1.png; Tile Outlet.jpeg; Tile Outlet 2.jpeg
Importance: High

Good evening,

Today, I investigated WBIC 5016995, located in the township of New Franken, upstream of the Michiels Rd crossing. Yesterday, I responded to a complaint near the stream and it appeared to be black, opaque, and had a strong odor consistent with leachate. Myself and Brian Hanson returned to the site today to inspect possible upstream sources. The stream is located adjacent to Dairyland Farms LLC. The stream flows west to east on the south side of the production site. We met with Larry Dufek (owner of Dairyland) and Dan Davister (manager at Dairyland). While walking the stream, we observed a tile outlet located southwest of the feed storage area at Dairyland Farms. There was a manure transfer hose in the adjacent field from a recent manure application, which Davister stated occurred four or five days ago. Water discharging from the outlet was grey in color and had an odor consistent with leachate. The water downstream of the confluence was black, opaque, and had an odor consistent with leachate. Water upstream of the confluence was clear, with no visual indications of manure contamination. Dairyland Farms promptly broke the tile line with an excavator, creating a sump to collect process wastewater from. Additionally, Dairyland Farms will collect impacted water from the Michiels Rd crossing and the Gauthier Rd crossings, east of the farm. I will most likely be back onsite tomorrow to inspection clean up efforts.

A total of five samples were collected from the stream, identified on the attached map.

Please let me know if you have any questions.

Thank you,
James
