Hi Cody,

Gotcha thanks that helped, that would've been the endpoint spill from near B59. My notes state:

"At 10:19 I got a call that there was a spill by B59 from one of the intermodals managed by endpoint. Based on initial conversations with endpoint it turns out that this intermodal had just been filled with Building 18 foam wastewater. The water was transferred to the intermodal for disposal at US ecology in Texas. It appears that the spill happened when the intermodal was moved and the material foamed up enough from the movement to push out the overflow relief valve/line. It appears that the spill quantity was 5-10 gallons and was contained on the asphalt and is being cleaned up with oil dry. We will move this tanker over a temporary spill berm once the spill is cleaned up."

Attached is a picture showing the location on the site of the spill.

Thanks,

Ryan Suennen
