Subject: Westfield Way - BRRTS # 02-68-594047

Hello Kevin,

Thank you for discussing the Westfield Way project with me and updating me on your site information and plans.

The DNR received your January 18, 2024 submittal for the Westfield Way project, which has BRRTS# 02-68-594047, which included a fee for DNR review.

As we are still in the process of reviewing the submittal, you've asked whether DNR can provide some interim feedback on your proposal to conduct an excavation in the area around SB-2 with the objective of removing the majority of the contaminated soil. The DNR concurs that removing soil contamination that may pose a vapor or groundwater risk is a meaningful interim or final remedial action to take. As we discussed, it is recommended that you consider collecting excavation confirmation samples, especially in the base and in proximity to the building.

Interim actions, like the proposed excavation, may be conducted prior to completing or receiving final approval of a site investigation. Interim actions may ultimately be all that is needed for a site remediation. Your client may choose to proceed with the excavation and provide the documentation of that work to support the site investigation documentation and DNR's review of it.

I hope this email provides you with the assistance you need to advise your client on next steps. If your client decides to move ahead with the excavation work prior to receiving our review of the January submittal, please let us know if we should proceed with the fee review of the submittal now or pause the review until receiving the excavation documentation, which would be a good supplement to round out the submitted information. As a standard reminder, our reviews may include requests for additional information or investigation.

Please contact me if you'd like additional input on this issue.
Pam
