SUBJECT: Enbridge Energy Line 6 Cambridge Site Visit

Regional Spill Coordinator Trevor Bannister and I visited the Enbridge Energy Line 6 Cambridge Station Site on January 7, 2025. We met with Enbridge Operations and Enbridge’s environmental consultant from GEI consultants. We discussed the December 23, 2024, surface water sampling and the proposed next phase of investigation. We looked at the source area. The excavation had been previously filled. We assessed the adjacent unnamed creek. No sheens, odors, or other indications of impacts were observed in the creek. The creek was mostly frozen over.

Photo Log:

Standing on the southwest edge of the pump house looking northeast towards the area of the excavation. The excavation has been filled in. The PVC risers can be seen to the left.
