Subject: June 2020 Groundwater Monitoring Results
PSK Investments, 9922 W. Capital Drive, Milwaukee, WI
BRRTS: 03-41-546764 Phillips 66 Station

Dear Mr. Hnat:

SCS Engineers is providing the following groundwater monitoring report for the above-noted PSK Investments case. Groundwater sampling was performed on June 11 and 15, 2020. The sampling was performed as planned with the following exceptions:

- The sump well could not be accessed for sampling on June 11 due to a stuck slip cap. The cap was removed and the sump was subsequently sampled on June 15.
- A water level measurement was not taken for monitoring well MW6 as the property owner (Grace Christian Fellowship) had not granted permission to access the well prior to our fieldwork.

Methods

Per the approved October 5, 2018 Change Order Request, water levels were measured at each well and wells MW1, MW2, MW3, MW5, MW7, MW20, MW21, and the groundwater sump were sampled for petroleum volatile organic compounds (PVOCS) plus naphthalene. Samples were collected using bailers after purging four well volumes or until the well went dry. A grab sample was collected from the sump without purging. Purge water was contained on site in a 55-gallon drum for future disposal.

Samples were containerized and properly preserved using laboratory-supplied containers. All samples were submitted under chain of custody to Eurofins TestAmerica of University Park, Illinois, for analysis. Laboratory analytical reports are provided in **Appendix A**, and groundwater analytical results are summarized in **Table 1**. Water level measurements are summarized in **Table 2**, and a groundwater flow map is provided as **Figure 1**.

Findings

Groundwater analytical results for the June 2020 sampling event confirm a continued decrease in groundwater contaminant concentrations. PVOCs and/or naphthalene exceeded enforcement standards in samples collected from wells MW3, MW20, and MW21. Based on sampling results to date, contaminants are not present at the remaining 11 wells at concentrations in excess of preventive action limits.

Mr. John Hnat
June 30, 2020
Page 2

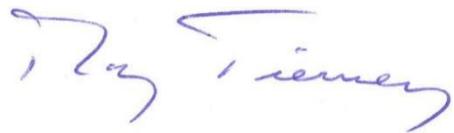

In general, groundwater levels measured in June 2020 were approximately 1 foot higher than measured during prior sampling in March 2016, but within range of historic levels. The groundwater flow direction for June 2020 was predominantly northeast, which is consistent with prior flow information for the site.

Based on continued decreases in groundwater contaminant concentrations, SCS Engineers recommends that the soil vapor extraction (SVE) system be turned off per our June 24 SVE letter, and that the site be assessed for closure.

Sincerely,

Robert Langdon

This table is adapted from previous reports by OM Enterprises. SCS Engineers results are for the 3/15/16 and later results (if present)

Laboratory Notes/Qualifiers:

B = Compound was found in the blank and sample.

J = Denotes concentration between Limit of Detection (LOD) and Limit of Quantification (LOQ)

J1 = Result is less than the Reporting Limit (RL) but greater than or equal to the Method Detection Limit (MDL) and the concentration is an approximate value.
