Chicago, IL 60604-3590

RE: Bi-Weekly Summary Report for Pump Down Program
Tyco Fire Products LP Site
Marinette, WI

Dear Mr. Neal:

The information provided herein is a summary of activities conducted at the Tyco Fire Products LP (Tyco) site associated with the Pump Down Program (PDP) for the former Salt Vault and 8th Street Slip areas. The PDP is required as part of the Administrative Order on Consent between Tyco and the U.S. Environmental Protection Agency (USEPA). This summary report covers the period from August 31, 2019 through September 13, 2019.

Summary of Work during Reporting Period

Work conducted during the reporting period included:

- Manual water level readings at the designated monitoring points and extraction wells were collected at least weekly during the reporting period. The average water level, based on the most recent water level measurements (September 12, 2019) during the reporting period, in the former Salt Vault was 579.31 feet above mean seal level (ft. AMSL), or 1.41 feet above the target level. The average water level in the former 8th Street Slip was 574.64 ft. AMSL, or 3.26 feet below the target level. A cumulative summary of manual water level readings and corrected elevations is attached as Table 1.
- During pumping operations, total groundwater recovery rates in the former Salt Vault area averaged 1.71 gallons per minute (gpm) from the four extraction wells during the reporting period and 1.36 gpm from the two extraction wells in the former 8th Street Slip. During this reporting period, based on the water level within

the former Salt Vault being below target level, extraction well EW-8 was shut down while all other extraction wells operated continuously. Pumps for each of the extraction wells in each area were reported to have operated continuously as planned during the reporting period without any mechanical issues.

- Off-site transportation of recovered groundwater was conducted during the reporting period. Off-site disposal operations are limited to five days per week with generally one (1) to two (2) trucks (approximately 7,500 gallons) per day necessary to maintain tank levels allowing for continuous pumping from the extraction wells.

A summary of pumping and disposal operations for the 2019 season is provided below.

Summary of Pump Down Operations (September 13, 2019)

	Gallons Pumped	Gallons Treated at GWTS ¹	Gallons Transported for Off Site Disposal
This Period	~44,851	~0	~46,451
2019 Operations to Date	~888,350	~0	~879,718 ²

All quantities are estimated

Issues Encountered During Reporting Period

No operational issues occurred during the reporting period.

Issues To Be Resolved During Next Reporting Period

No issues that require resolution have been identified at this time.

Anticipated Work During Next Reporting Period

Manual water level measurements will continue to be collected from the designated monitoring wells and extraction wells on at least a weekly basis. Extracted groundwater will continue to be transported to Vickery for disposal.

¹ GWTS – Groundwater Treatment System

² Volume includes stormwater recovered in secondary containment structure

If you have any questions regarding this report, please contact me at 414-524-3344 or jeffrey.howard.danko@jci.com.

Sincerely,

Jeffrey Danko
EHS Manager – Environmental Remediation

Notes:

Measurements were collected from top of casing (TOC). All depth measurements are in feet.

Elevations are reported in feet above mean sea level (AMSL) relative to the North American Vertical Datum 1988 (NAVD88)

Shaded = Well part of evaluation during Drawdown and Interim Phases

Bold = Well part of Target Elevation calculation

- = Information not applicable or not collected

Area Definitions - SV - Salt Vault, 8SS - 8th Street Slip

*Wells identified for target elevation calculation are for during the drawdown and interim phases. Only wells outside the steepest portion of the cone of depression will be included in the calculation of the average elevations. The average elevation of all suitable measured wells will be considered the calculated elevation to compare against the target elevation. The number of post-drawdown phase wells used for this calculation may be reduced and will be determined based on results observed during the drawdown phase.

**Staff gauge elevation is approximate due to recent damage and is scheduled to be re-surveyed.

ID = identification; DTW = depth to water

NM = Not Measured; MW = Monitoring Well
