Subject: DNR PCM Request for 2748 N 32nd St, Milwaukee BRRTS #02-41-263575

Robert,

I am reviewing the request for the above-referenced site and have a few questions/comments:

1. As I mentioned to you on the phone yesterday, the DNR will need to see the detailed plans for the proposed garage ventilation system.
2. The figures were not included with the submitted post-closure modification (PCM) request. Please submit those.
3. The PCM should detail any changes to the required caps. The request only says "Paved areas will have pavement removed, be regraded, and then restored with asphalt." More details should be provided if any of the paved areas were the engineered caps approved at closure.
4. Show on a figure where the sub-slab depressurization system (SSDS) is located within the proposed development.
5. Submit a site figure that shows both new and historical borings with their associated analytical data. It should include all historical releases/closed BRRTS activities and their associated RCL lines, GW plumes, etc. At this point, it is unclear whether there are any previously uninvestigated releases at the site. A figure showing both new and historical data will help us determine whether a new BRRTS site will need to be opened that will require a NR 700 investigation.

I will be meeting with our vapor team next week to review the vapor investigation data. I might have some additional questions for you after that.

Thanks,

David
