Subject: PFAS SIWP Review - Ashview Terrace Apartments (BRRTS # 02-05-564043)

Mike,

DNR has reviewed the PFAS Site Investigation Work Plan for the above referenced site received on November 17, 2020. Based on the review, the following DNR comments are provided:

- It may be beneficial to install an additional monitoring well within the waste mass in order to determine if PFAS is present within the source area.
- Soil samples analyzed for PFAS may also provide useful information. Any soil samples collected could be held by the laboratory pending the analytical results of the groundwater investigation.
- The DNR is currently in the rulemaking process to establish groundwater standards for PFAS related compounds. Future reports should include these proposed groundwater standards. As this is a developing issue, you are encouraged to refer to the following websites for updated information related to PFAS: <https://dnr.wisconsin.gov/topic/PFAS> and <https://dnr.wisconsin.gov/topic/Groundwater/NR140.html>.
- Depending on the future groundwater sampling results and flow direction, additional site investigation activities may be needed.

With the above comments, this email serves as you notice to proceed with the proposed sampling activities to confirm if PFAS contamination is present in groundwater.

Let me know if you have any questions or comments.

Thanks,

-Keld
