Subject: RE: Revised Sampling locations - Wells 23 & 24, La Crosse

Hi John,

I agree with all of the newly proposed downgradient boring locations. It appears that you are proposing to collect soil samples at the soil/water interface as well as the groundwater samples at each of the proposed downgradient boring locations from the following areas: 1) 1997 fuel spill area; 2) AFFF Test Area; 3) Former airport fire station, and; 4) 2001 crash site. Considering the downgradient location of these borings I believe the proposed groundwater samples would be more valuable and I would suggest forgoing the soil samples at these locations. Please proceed with the outlined scope of work.

Thank You

We are committed to service excellence.

Importance: High

Dave - As we discussed, attached is a letter and figures outlining revised Sampling locations. In a couple instances we reduced the number of shallow borings/samples and increased deeper borings and sampling at the capillary fringe. A KMZ file of the sampling locations is also attached for you to review on Google Earth. Please call me with any question you may have.

Sincerely,

John
