**Subject:** 3M Rail Lots, BRRTS#02-37-587000, Site Investigation Work Plan

Kevin,

The Department has reviewed the Investigation Activities Work Plan, submitted on your behalf by Arcadis, and has the following comments regarding the submittal:

- It is not reasonable to conclude that arsenic contamination found along a rail corridor is from a background source
- Industrial direct contact exceedances are present at SB-01 and SB-02, the investigation should include additional soil borings to define the extent of arsenic contamination in these areas
- An emerging contaminant scoping statement is required for the site and could be included in the work plan resubmittal

Please resubmit a modified work plan to include an expanded area of investigation and scoping statement for emerging contaminants for Department review. If you have questions or comments regarding this determination, please contact me.

Best regards,  
Matt
