Hi Greg,

I am currently pulling double duty filling in for a vacancy in our program so I have been swamped. I have not dug into it in detail yet. I am hoping to get to it in the next couple weeks.

The one thing I did notice is that the replacement wells in the Horton Sphere and gas holder areas are still depicted as single wells when the DNR has repeatedly asked for piezometer nests at these locations. Piezometer nests are necessary to realistically assess groundwater quality in the area of backfill and ORC placement and in the Miller Creek Clay below the backfill. Currently the DNR is not intending to approve the final design without these wells.

I will put together a formal reply once we review the entire document. Please let me know if you would like to discuss the comment above prior to the DNR issuing a letter for the 90% design.

Thanks.

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.

Good day John,

I thought I would check in and see how the 90 % review is coming along. The contractor bids are due tomorrow and I wanted to make sure the project is still tracking on schedule.

Thanks,

Greg Prom
