Matt, currently LNAPL is not present at well W40R, so we are planning on sampling this well in July.

The concern with sampling a well with LNAPL present is that it is not possible to collect a sample without inserting the sampling equipment through the LNAPL, which will likely impact the groundwater sample, such that the result is not representative of groundwater quality/conditions. Thanks, Bruce

Bruce and Steve- I'm reaching out to verify if W40R will be sampled if LNAPL is observed during the summer 2023 sampling event. If it is unable to be sampled, please provide a brief explanation I can share with concerned community members.

Thanks much, Matt
