Hello Mike,

Thanks for reaching out. Though PFAS standards have not been codified, PFAS meet the definition of a hazardous substance and are subject to regulation under Wisconsin Statutes ch. 292 and the requirements for investigation and remediation in Wisconsin Administrative Code chapters NR 700-799. The second round of groundwater samples confirmed an exceedance of the Wisconsin Department of Health proposed combined groundwater standard at SB-1R, SBGW-3R, and SB-14R. Initial soil sampling showed the presence of PAS in soil at SB-8R indicating the possibility of a PFAS source of the site.

The next step for the site is defining the extent of PFAS contamination in groundwater. This will likely require installation of off-site monitoring wells. The DNR can review a proposed work plan once it has been completed, if that would be helpful, please submit a technical assistance request with the work plan.

Thanks again,  
Matt

Good afternoon, Matt. It has been 90 days since we submitted the last status report for the Wausau Incubator (Former) site. Do you have any updates on this? Can we begin preparations for well abandonment before the snow starts to fly, which is not too far around the bend unfortunately.

Thank you,

Mike

Matt,

Please find attached a copy of the Status Report and confirmation of submittal via the RR Program Portal for the Wausau Business Incubator (Former) site. The report provides a summary of the second round of PFAS groundwater sampling completed at the site per your request. Based on these results and information presented in the SIR, we anticipate additional assessment for PFAS will not be necessary and you can approve the proposed abandonment of the existing monitoring wells at this site.

Regards,

Mike
