## Qualifiers

LCMS	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Laboratory: Eurofins Sacramento

#### Narrative

#### Job Narrative 320-104488-1

#### Receipt

The samples were received on 9/1/2023 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.6° C.

#### LCMS

Method 537 (modified): Results for samples MW-01-202308 (320-104488-1), MW-02-202308 (320-104488-2), MW-04-202308 (320-104488-4) and DUP-09-202308 (320-104488-9) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method 537 (modified): The low laboratory control sample (LLCS) for preparation batch 320-707208 and analytical batch 320-707310 recovered outside control limits for the following analytes: NMeFOSE and NETFOSE. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 537 (modified): The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. However, analyst judgment was used to positively identify the analyte: MW-04-202308 (320-104488-4) and DUP-09-202308 (320-104488-9).

Method 537 (modified): The RPD of the low laboratory control sample (LLCS) and low laboratory control sample duplicate (LLCSD) for preparation batch 320-707208 and analytical batch 320-707310 recovered outside control limits for the following analytes: NMeFOSE and NETFOSE.

Method 537 (modified): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: MW-04-202308 (320-104488-4) and DUP-09-202308 (320-104488-9). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The samples were re-analyzed with concurring results; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method 3535: The following samples in preparation batch 320-707208 were observed to have a thin layer of sediment present in the bottom of the bottle prior to extraction. MW-05-202308 (320-104488-5) and MW-06-202308 (320-104488-6)

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-707208.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
