Subject: DNR review of July SI report - Julson Store (03-06-001296)

Hi Aaron.

Bc: John Marum – property owner

This email follows our telephone conversation last Friday (15th) in which we discussed the Soil and GW Inv. Rpt submitted in July for the Julson Store (former) site south of Mondovi. In that report, I recommended we complete an interim remedial excavation this fall followed by test wells and monitor to closure.

DNR staff determined that more Site Investigation is needed before a remedial option should be considered and approved. Subsequently, I will send you a revised Change Order/Work Plan to install 2-inch monitoring wells in order to define the extent of impacted ground water and characterize the aquifer properties (e.g., hydraulic conductivity, ground water flow direction (horizontal, vertical), etc). I will also install additional soil borings (and sampling) to more precisely define the extent of impacted soil.

Our goal is to complete the SI work through the winter so that a remedial option can be implemented next summer ... which is needed to complete this project before the upcoming PECFA deadline.

Please let me know if you have any additional comments about the project.

Will send you CO/WP shortly.

Thanks for your phone call.
