Subject: Department Review of Revised November 2017 Groundwater RAOR Alternatives

Dear Mr. Schreiner:

On November 16, 2017, the Wisconsin Department of Natural Resources (the "department") received the technical memorandum "Development and screening of alternatives/List of Alternatives for Revised Groundwater RAOR" for the Wauleco site, BRRTS# 02-37-000006 on your behalf from TRC Environmental Corporation (TRC). The technical memorandum summarized the identification and screen of technologies to be included in the revised remedial action options report requested by the department, August 31, 2016.

The department's technical memorandum responding to TRC's September 2015 Groundwater RAOR requested a re-evaluation of the remedial actions to consider the following:

- 1) "Necessary restoration", as referenced in NR722.07 (4) (a) 4, pertains to all exposure pathways.
- 2) The restoration goal for the groundwater pathway is the preventive action limit within a reasonable period of time [NR 722.09(2)(b) 1, NR 140.26(2), NR 726,05(6)(b)].
- 3) Adequate source control must be achieved.
- 4) Stable or receding plume must be demonstrated.

If Wauleco and TRC believe the alternatives presented in the "Development and screening of alternatives/List of Alternatives for Revised Groundwater RAOR" technical memorandum addresses the department comments from their August 31, 2016 letter then consider this letter a notice to proceed with developing a revised groundwater RAOR. A request for concurrence with this alternatives list by the department may be made under Ch. NR 749 Wis. Adm. code. Please complete Form 4400-237, Technical Assistance and Environmental Liability Clarification Request if you would like a concurrence determination.

Please call me at 715-839-3750 with questions or comments regarding this letter.

Sincerely,

Matt Thompson
