TIME: ~3:00
PHONE: _____

Defresne spoke with Ebbott regarding Fehr
Graham's December 7 & 8, 2016 emails.

DNR is in agreement with a compacted gravel
surface in the area of soil excavation.
Keep in mind the excavation and modified
surface cover may cause some variability
in future groundwater sampling data.

Monitoring well MW-1 should be installed
at the base of the excavation. The
well depth should not extend beyond the
depth of the excavation as a means to
keep the base clay intact.
