Jason,

Here is Keld's response for sampling the site. Plan on another round.....6 months if possible.

Thanks for the update Tom.

There is a pretty limited dataset available for both sites. I would like to see another round collected in 6 months or more.

Will you update BRRTS for both sites?

Keld,  
I received these results for the 1404 S. Webster site. They have cost approval for one more round with DNR approval. Do you want/need another round for your ERP site?

Tom, attached are the data tables and laboratory results from the 5/30/18 gw sampling event as requested.

Overall contaminant levels could be argued as stable to decreasing with the exception of MW-4 slightly increasing in TCE levels (93 ppb in last round).

Based on these results, you were going to determine if we should go ahead with a second round (which was approved), or if we can go ahead with the SIR/Closure request at this time.

Any questions please call or email.

Thanks,

**Jason Powell**
