Good Afternoon Carrie,

Thank you for your prompt response. We will include the preparation of a formal Report of Results in our proposal to document all of the proposed field activities. We will get our proposal to Remington as soon as possible for authorization to proceed.

Have a great day.

Thanks again.

Subject: Remington Oil-Tomahawk SOW comments

Good afternoon, Travis. I just spoke with my supervisor, Chris Saari and Hydro Coordinator, John Sager about Endpoint's proposed work plan for the Remington Oil Bulk Plant -Tomahawk (03-35-258251). Our comments are below. If you have any questions or concerns, please feel free to contact me. Thanks, Carrie

- Based on the information provided in your November 18, 2020 email, we do not feel any further soil investigation for PVOCs is necessary. Please remember to reference this information in the revised closure packet.

- The field modifications for the replacement of MWs 800 and 1300 are fine. We know you will try to place these wells as close as possible to the original locations, but may be limited due to changes on the properties affected.

- The proposal for the one (1) driven point (sand point) groundwater monitoring well within the wetland area to the west to further define degree and extent is fine, however, please be advised, if detects are noted in this new well; you may need install additional well (s).

- We recommend starting this SOW as soon as possible, before the snow begins. However, if that is not possible, it would be ok to delay work until the spring of 2021, but please perform the VI investigation/sampling in the winter months.

- Please keep me posted on the status

- There was no mention of a report. Do you plan to submit raw labs?

We are committed to service excellence.
Visit our survey at http://dnr.wi.gov/customersurvey to evaluate how I did.
