Subject: RE: Response to DNR March 17, 2021 letter

Hi Paul,

You are correct. At this time we are looking for the SI Report to be compiled for areas of the site that have not previously been closed. If data from other closed activities relates to the current open activities this data should be discussed as well since it may aid in the discussion and understanding of current site conditions. If, during the report preparation and reviewing the SI checklist, data gaps are found in the current investigations, that is where we would be looking for further scoping and a Site Investigation Workplan to be submitted.

Let me know if any other questions come up or if you need further clarification.

Thank you,
Tim

Subject: Response to DNR March 17, 2021 letter

Eric and Tim – I am sending this email in response to the Department's March 17, 2021 letter in order to clarify the Department's request to submit a full Scoping and Work plan.

During the January 7, 2021 conference call, we discussed the steps that would be necessary to respond to the Department's December 11, 2020 Responsible Party letter. With respect to a Work Plan, it is our recollection that Tim confirmed we could proceed directly to Step 4, Site Investigation Report. During the call we discussed the extensive amount of historical site investigation work that has already been completed and we understood from that discussion that the DNR was not asking for new investigation work to be scoped. Instead, we understood that the Department is requesting a SIR to summarize the historical work that has been done to date in the areas that have not been "closed" by the Department.

Please confirm if our understanding is correct. We are happy to schedule a conference call to discuss further.

Regards
