Subject: RE: 310 Belknap - Emerging Contaminants Evaluation

Hi Grant,

Thank you for providing this information. I will address PFAS at this site with my below text.

Contamination associated with this site is from a leaking underground petroleum storage tank located at the site. Although there are many chemicals in the PFAS family, the use of PFAS in petroleum products has not been documented. Additionally, the use of PFAS related compounds has not been tied to any of the historic uses of the site (a lumber company, a gift shop, a salon, an insurance company, a cabinet maker, a sash/door factory, a tractor factory, a fly fishing shop, a shirt printer, offices, and an electrical contractor). Therefore, PFAS are not suspected to be an environmental concern at this site.

Let me know if you need anything else or have any questions. Thank you!

Jon Reis
