Good morning Adam-
Actually, on-site and off-site remedial soil excavation activities will be complete as of this week. We are finishing up soil removal activities on Custer Playfield this week. Two on-site wells (GE-MW01RR and GE-MW4R) were abandoned. We intend to prepare a workplan to outline intended monitoring well installation and sampling activities and other requested actions outlined in your emails from November 2020 and January 2021 in the next few weeks. Once complete and approved by Lube-Tech, the workplan will be provided to WDNR and other interested parties for review.

Hopefully this satisfiers your request. If you need further information, please contact me. Thank you.

Stu,

What is the status/current plan for groundwater monitoring at Moore Oil/LubeTech? As I understand it, onsite excavation complete, waiting for offsite excavation access. So some monitoring wells may have been removed for excavation and planned for replacement and sampling resumption. Can you give an update I can forward to Mike Solomon?

Thanks,

Adam
