After receiving this spill report I contacted Shari Klika from Pierce Manufacturing. She explained that the vehicle that leaked the diesel had been parked in the same spot long term so they did not know when the spill occurred. When it was noticed today they were able to determine that the fuel tank was full so they are suspecting that the leak is in the fuel system which typically holds 1.5-2 gallons. They were able to recover 1 gallon from the pavement so they suspect that no more than 1 gallon went into the storm sewer which discharges to the retention pond. The pond is currently frozen and snow covered and is not presently discharging.

I told Sheri that I would make sure the spill report and this information was sent to Roxanne and that someone would contact her if additional follow-up was needed.
