Sounds good! Greg Olson also confirmed a fourth drum in the garage. We submitted the waste characterization forms to Covanta and anticipate the drum removal this month.

Good morning Tim,

Yes, please include the analytical results for the soil borings as well. Please also include the post-remedial groundwater monitoring results in a table format and if there are any analytical reports not previously submitted to DNR include them in this report.

Thanks,

-Colin

Colin,

We are finalizing the excavation assessment report and have a few questions. In your October 21 2022 email, you requested that the soil boring logs and well construction logs for borings/wells installed post-excavation be included in the documentation report. Do you want us to also include the analytical results of the subsequent sampling? Although not requested, we also have included the sub-slab vapor testing performed about a week after the remedial activities. How about the post-remedial quarterly groundwater monitoring well analytical results or can those be submitted in the case closure packet?

Thanks!

Tim

Colin,

We will submit the remedial action summary report prior to Thanksgiving.

Enjoy the weekend as well!

Tim

Good morning Tim,

I'm checking in on the status of the excavation documentation report for First St. You said you thought it submitted by the end of October. When will you be submitting this report? It would be great if I could have it submitted by Thanksgiving.

I hope you have a nice weekend!

Colin,

We intend on submitting the excavation report by the end of this month. We are also preparing the case closure submittal, but will not submit until you have reviewed the excavation report. Please note that the email for the owner is gaolson@netnet.net. They are no longer using the olsonoil@netnet.net email.

What a glorious weekend it was! Hope yours was enjoyable.

Tim

Good morning Tim and Nick,

I am checking in with you both to get the status of the First St site in Pulaski. Last we spoke I believe your plan was to submit the excavation documentation report and submit for closure. Where are you at with preparing these reports? Please provide me with a timeline for getting the excavation documentation report submitted. We can talk about closure after that documentation report is submitted.

I do have some comments and questions for you to consider when preparing the excavation documentation report and moving forward at this site:

- On the map submitted with your 3/2/2022 submittal, there are soil borings labeled GP-14 and GP-15. TW-5 is also shown at the GP-15 location. Were soil and groundwater samples collected at these borings/temp well?
- Include soil boring logs and well construction logs for borings/wells installed post-excavation in the documentation report.
- Emerging contaminants scoping is still needed for this site.
- Assess if you have a clean upgradient monitoring well.

I hope you have a nice weekend and can enjoy this last hoorah of summer!

Regards,

-Colin
