SUBJECT: Final Case Closure
STORY ST HISTORIC TANK, 315 S. Pierce Ave., Appleton, WI
WDNR BRRTS Activity #: 02-45-554623
WDNR VPLE # 06-45-553959

Dear Ms. Klika:

The Department of Natural Resources (DNR) considers the STORY ST HISTORIC TANK site closed. No further investigation or remediation is required at this time. Please read over this letter closely to ensure that you comply with on-going requirements. Provide this letter to anyone who purchases this property from you. For residential property transactions, you are required to make disclosures under s. 709.02, Wis. Stats.

This final closure decision is based on the correspondence and data provided, and is issued under ch. NR 726, Wisconsin Administrative Code. The DNR Northeast Region (NER) Project Manager, NER Closure Committee and NER representative on the Land Recycling Team reviewed the request for closure on November 9, 2012. The Project Manager, NER Closure Committee and NER representative on the Land Recycling Team reviewed this environmental remediation case for compliance with state laws and standards. This final closure decision replaces the February 26, 2010 letter titled, *Final Case Closure with Continuing Obligations*. In addition, the site investigation for the property is approved under s. 292.15(2)(a)1, Wis. Stats. under the Voluntary Party Liability Exemption (VPLE) Program for WDNR BRRTS #06-45-553959.

The property was formerly utilized by Pierce Manufacturing, Inc. (“Pierce”) with historical uses including various commercial and industrial uses. Pierce ceased utilizing the property in 2010. A 250-gallon storage tank and fueling station was present along Story Street where leaded gasoline was historically released. The area was investigated in 2009 and originally closed under ch. NR 726, Wis. Adm. Code on February 26, 2010 with the requirement to maintain the asphalt cap over residual soil contamination.

From October 2011 through February 2012, Pierce Manufacturing, Inc. proceeded to demolish all structures on the property, remove concrete and asphalt barriers, excavate all soil contamination above standards to depths ranging between 1 and 15 feet below ground surface (bgs), remove all historic fill (such as cinders) and backfill the excavations with clean clay. Documentation of these most recent efforts, along with an updated *Phase I Environmental Site Assessment*, dated May 31, 2012, was submitted to the DNR on October 8, 2012 with a request to remove the site from the GIS Registry and remove all continuing obligations. This second review of data under ch. NR 726, Wis. Adm. Code was

based on the property being used for residential purposes. Specifically, the intent is to sell the property for residential development.

GIS Registry

This site will be removed from the Remediation and Redevelopment Program's internet accessible Geographic Information System (GIS) Registry, originally placed in February 2010 to provide notice of continuing obligations (residual soil contamination above standards and maintenance of a cap).

Residual Soil as Solid Waste

Low-level impacts to soil, below soil standards, are present at various depths throughout the property in the native soils material. Sampling locations are indicated on the **attached map**. Associated soil data and corresponding depths can be found in the DNR file. If native soils are excavated in the future, the property owner at the time of excavation must sample and analyze the excavated soil to determine if any impacts remain. If sampling confirms that contamination is present, the property owner at the time of excavation will need to determine whether the material is considered solid or hazardous waste and ensure that any storage, treatment or disposal is in compliance with applicable standards and rules.

The property owner may request the low-level impacted soils to be beneficially reused on site by submitting a request for a Low Hazard Grant of Exemption to the Waste & Materials Management Program (WA). Please contact Jim Zellmer, NER WA Supervisor, in Green Bay at (920) 662-5431 for additional information.

Please be aware that the case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code, if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety, or welfare or to the environment.

The DNR appreciates your efforts to restore the environment at this site. All site information is on file at the DNR's Oshkosh Service Center, at 625 East County Road Y in Oshkosh, Wisconsin. If you have any questions regarding this closure decision or anything outlined in this letter, please contact me in Oshkosh at (920) 424-7887 or via electronic mail at Jennifer.borski@wisconsin.gov.

Sincerely,

Jennifer Borski
