John,

Just a quick update regarding the progress of the Supplemental Site Investigation #3 for the Superior Terminal (BRRTS# 02-16-589282) along with the anticipated schedule for receipt of sample results and submittal of the SSI#3 Report.

Earlier in October we installed two monitoring wells according to our work plan. As expected, in the low permeability clay formation, the recharge rate for these monitoring wells is very slow. Therefore, well development is awaiting sufficient water to be present, which will also delay groundwater sampling. Water levels in the monitoring wells are being checked weekly, and well development and sampling will be performed when well recovery allows. We estimate the groundwater sampling may occur in December. Receipt of the laboratory results may then be anticipated sometime later in January or early February 2026.

Additionally, the two planned surface water samples were collected this past week from the Nemadji River. The samples were submitted for laboratory analysis with the results anticipated to be available in December.

Based on these activities, we wanted to provide the Department with an updated project schedule, as follows:

- Surface Water, AECOM anticipates receiving the lab results in December 2025.
- Groundwater, AECOM anticipates receiving the lab results in January/February 2026.
- Supplemental Site Investigation Report #3, anticipate submittal to the Department in April 2026.

We will provide a further update if the groundwater recovery rates again alter the estimated schedule. Please let us know if you have any questions or comments regarding our progress or the updates to the schedule.

Thank you,
Nick
