

Wisconsin Department of Natural Resources

SWIMS Project Summary

Project ID:	NKE84
Name:	Waumandee Creek PWS Plan - Nine Key Element Plan
Type:	Water Quality Planning
Subtype:	Priority Watershed Plan
Status:	COMPLETE
Start Date:	3/1/1990
End Date:	12/31/2011
Purpose:	<p>The Waumandee Creek Watershed drains 204 square miles of land in Buffalo County in western Wisconsin. The Waumandee Creek Priority Watershed Project plan assesses the nonpoint sources of pollution in the Waumandee Creek Watershed and guides the implementation of nonpoint source control measures. These control measures are needed to meet specific water resource objectives for Waumandee Creek and its tributaries. Nonpoint sources of pollutants most commonly found in this watershed include: polluted runoff from barnyards and feedlots, sediment from cropland erosion, and sediment from streambank erosion.</p> <p>The purpose of this project is to reduce the amount of pollutants originating from nonpoint sources that reach surface water and groundwater within the Waumandee Creek Priority Watershed Project area.</p>
Objective:	The primary objective of the project is to reduce nonpoint source pollution to the surface water and groundwater, and to enhance and protect the water quality of streams in the Waumandee Creek Watershed.
