Evaluation of Myriophyllum spicatum (EWM) Management Using Diver Assisted Suction Harvest (DASH) - Cedar Lake, 2018	In July and August 2018, DASH (Diver Assisted Suction Harvest) was employed to reduce/control stands of Myriophyllum spicatum-Eurasian watermilfoil (EWM) in Cedar Lake. The areas that were harvested were based upon pre-harvest surveys conducted in areas that have historically been managed in the past using herbicide. Due to the lack of success with herbicide (2,4-D and Diquat/Endothall) were used on different occasions with limited reduction), herbicide use was ceased for 2018.
