

Wisconsin Department of Natural Resources SWIMS Project Summary

General Project Information

Project ID: East_3_CMP17

Name: NE Lakeshore TMDL Monitoring

Type: TMDL/303d Projects

Subtype: Refine Load Estimates

Status: ACTIVE

Start Date: 1/1/2017

End Date: 12/31/2021

Purpose: Edit 11/09/2017. This project has been renamed to the Lakeshore TMDL (previously Manitowoc Area TMDL) but retained the same Project ID. All data and fieldwork events will be retained. Additionally, data and fieldwork events from the Ahnapee River TMDL monitoring (East_12_CMP16 & East_4_CMP17) will be associated with this project, but those project will also be retained in the 2016 and 2017 Local Needs folders for posterity. Although the data is associated in two projects, this will not result in duplicate data in the database.

This project is to collect water chemistry and flow data needed to write a TMDL for the Manitowoc area. The Manitowoc area includes the Manitowoc River Basin, the East Twin River and the West Twin River watersheds.

Objective: Every two weeks water chemistry and flow data are needed throughout the area to develop a TMDL. The pour points of 20 HUC12's will be monitored to adequately characterize all 7 HUC10's of the proposed TMDL area.

Comments:

Outcome: Data will be collected with an adequate frequency to characterize the total phosphorus and total suspended solids loading from these watersheds. These data will be used to develop a TMDL.

Study Design: Every two weeks water chemistry (total phosphorus and total suspended solids) samples will be collected at 20 pour point locations during the open water season of March - November. Monthly samples will be collected in winter December - February. Flow data will also be collected on at least 10 occasions at several sampling locations to develop a flow rating curve. Pressure transducers will be installed in at least seven locations in the watershed. UW-Manitowoc interns will monitor 5 sites under contract.
