SWIMS Project Summary

Date	Reported By	Status	Comments
1/21/2011	MARK SESING	Progress: 50-75% Complete	This project monitoring was initiated in 2007 with the expectation that a successful carp management program would alter the trophic condition of the marsh. Although carp mngmnt has been relatively successful in the marsh (tributary to Big Green lake), water quality appears to remain degraded. This condition will likely shift as further approaches are employed via the Green lake sanitary District and DNR. Sampling (1 event) was completed in 2007, and one in 2008. The parameters included TSI and Suspended solids/ Volatile suspended solids in each year. 3 stations are sampled, so there are 6 total station specific sampling events, over the 2 year period. All stations have primary station numbers assigned. An Aqautic plant survey was conducted in 2008 .Point intercept protocol was used. Although the conditions in the marsh have not improved as expected, this project should be completed (i.e. post carp control success) in the near future so the marsh can be delisted.
5/29/2012	Theodore Johnson	Progress: 75-100% Complete	Mark Sesting retired and I was just assigned to this project. I will interpret and write a short report about the three sampling events that took place.
7/2/2012	Theodore Johnson	Complete	This project was conducted by Mark Sesting. Only one sampling event was conducted. No report is possible with so little data. Phophorus levels are indicative of a hyper-eutrophic system. Another more thorough assessment is needed in the future.
