SWIMS Project Summary

General Project Information

Project ID: GL00E00876_sub6

Name: Shoreline Stabilization in Problem Areas

Type: Great Lakes Restoration Initiative

Subtype: Habitat

Status: COMPLETE

Start Date: 9/26/2011

End Date: 12/31/2016

Purpose: This project will address sedimentation from large sections of unstable and eroding riverbanks that are adversely impacting aquatic communities (fish and benthos) and associated wildlife populations in the Sheboygan River AOC. Eroding soil is a significant source of degradation to rivers. The eroded soil impacts water quality, transports excess nutrients into the river and smothers benthic organisms. In the Sheboygan River AOC, several areas have considerable erosion issues.

The F&W TAC identified five problem areas with significant erosion issues during a reconnaissance survey in September of 2010.

Objective:

- Reduce or eliminate bank and soil erosion in problem areas throughout the AOC.
- Stabilize these riparian areas in a manner that creates suitable habitat.

Comments: \$305,000

Outcome:

- Stabilizing of approximately 1000 feet (over 10,000 square feet) of river bank at several sites throughout the AOC.
- Preventing approximately 307 tons per year of sediment from eroding into the Sheboygan River.
