

Wisconsin Department of Natural Resources SWIMS Project Summary

General Project Information

- Project ID:** WCR_02_CMP13
- Name:** WCR 303d Stream Assessments 2012 - WCR_02_CMP13
- Type:** Competitive Projects
- Subtype:** Impaired Water Assessment
- Status:** ACTIVE
- Start Date:** 7/1/2012
- End Date:** 12/31/2012
- Purpose:** WCR proposes to monitor 5 streams and two rivers in 2012 that are currently on the 303d list. Data collection will include fish and qualitative habitat surveys, macroinvertebrate samples and continuous temperature monitoring. In addition continuous data will be collected from the Black and Red Cedar Rivers. A segment of the Black River is listed for low dissolved oxygen concentrations but recent data is lacking that supports the listing. The Red Cedar River just below Lake Menomin is currently on the 303d list for eutrophication but this listing is likely appropriate for the entire river below Lake Menomin. Continuous monitoring equipment will be deployed in the river to document summer low flow dissolved oxygen and pH concentrations from Menomin downstream near the mouth. Regional staff will also monitor streams that have been previously identified as candidates for 303d listing. These streams historically supported reproducing brook trout but few or zero trout have been found during recent surveys. Monitoring also indicates the streams should thermally support trout but degraded habitat conditions are likely the major limiting factor to the fishery. Trout may have been extirpated by some historic event and have not been able to migrate back into the streams. Downstream waters are not capable of supporting brook trout, therefore brook trout cannot migrate back to these streams. Previous attempts of establishing trout consisted of stocking hatchery brood stock. Fish Management now plans to stock feral fingerling brook trout in the streams to determine if trout are able to survive, carryover and reproduce in the system. Evaluating trout survival in these streams will help define the extent of the poor habitat conditions. Water Resources staff plans to conduct fishery surveys at 10 sites on four streams in late summer of 2012 to document the densities of trout following stocking in June. Additional surveys will be completed in the summer of 2013 to evaluate winter carryover success.
- Objective:** This project supports the impaired waters project category. Monitoring on the existing 303d waters will validate and improve the existing waterbody listings. Surveys completed on four streams to document carryover success of feral trout stocking will help define the extent of degraded habitat conditions and allow for more accurate 303d listing.
- Comments:** This is a new project and sites will be determined after field recon is completed.
- Outcome:** Fish and qualitative habitat surveys, continuous temperature monitoring and macroinvertebrate samples will be completed at approximately 10 sites on five existing 303d listed streams. These streams are lacking recent information. Continuous monitoring sondes will be deployed on segments of the Black and Red Cedar Rivers. The sondes will be deployed at summer low flow conditions and will capture dissolved oxygen, pH, temperature and conductivity data. The data will determine if dissolved oxygen and pH standards are exceeded. Fish surveys will be completed at 10 sites on four streams to evaluate feral trout stocking in streams considered for 303d listing. Continuous temperature loggers will be deployed to document the summer regime. TP monitoring would also be completed to determine if streams exceed the TP criteria. Samples will be collected near the mouth of these small streams. Monitoring will follow WISCALM guidance where 6 monthly samples will be collected during the growing season.

8/28/2012	MARK HAZUGA	Progress: 50-75% Complete	Electrofishing surveys are nearly complete. Macroinvertebrate samples will be collected in Fall 2012. Summary reports will be completed in the WATERS database when macroinvertebrate results are received from Stevens point.
1/25/2013	MARK HAZUGA	Progress: 75-100% Complete	All data has been collected and fish and water chemistry data has been entered into appropriate databases. Macroinvertebrate samples have been delivered to UWSP, WATER database summaries will be completed this winter for waterbodies where all data is available. 303d waterbody recommendations will be completed for three streams.
9/30/2013	MARK HAZUGA	Progress: 75-100% Complete	Data was used to develop documentation sheets from Hay, Diamond Valley and Thompson Valley Creeks. This streams were recommended for listing on the 2014 303d list. WATERS updates have not been completed for Weiland Valley, Eau Galle and Pigeon Creeks and Red Cedar and Black Rivers.

Project Status Detail

Answer Set: DEFAULT

Question	Answer
1. Number of Sample Sites (Enter the station IDs if you know them).	10 TBD sampling sites on existing 303d streams will include the collection of fish, qualitative habitat, temperature and macroinvertebrate data; Two rivers will have continuous monitoring completed at 3 sites each for a total of 6 sites; Fish surveys will be completed at 10 sites on four streams to evaluate feral brook trout stocking success.
2. Number of Sample Events (Indicate how many trips into the field you anticipate for this project).	Five existing 303d streams will have 3 sampling events (1)recon/temp, (2) fish and habitat (3) macroinvertebrate sampling. There will be approximately 8 trips into the field for this monitoring. Continuous monitoring on Red Cedar and Black River will include two sampling events each and feral trout stocking surveys on four streams will include four trips.
3. Proposed Dates for Sample Collection	Recon and temp logger deployment will start in late May or early June and macoroinvertebrate sample will be collected in October. Fish and habitat surveys and continuous dissolved oxygen and pH monitoring will be conducted throughout the months of June through August.
4. List applicable databases and who will enter data?	Macroinvertebrate data will be batch uploaded into SWIMS when analysis is complete by CO and Regional staff will enter continuous data into SWIMS. Regional staff will also enter fish and habitat data into the FH Database.
5. Did you receive competitive projects funding in the previous year?	Yes
6. If yes to question 5, did you complete the projects including data entry and reports as necessary? If not, why not?	All fish and habitat data has been entered and most continuous data has been entered into SWIMS. Watershed table updates and 303d narratives in WATERS will be completed in the fall when bug data is back and field season is over. These WATERS updates have been completed for years prior to 2011
7. Reviewer Notes: Identify questions or issues with project (use during review period)	
8. Reviewer Decision: Is this project recommended for funding?
